Revisions
Le edizioni dei cataloghi che subiscono revisioni, riportano al centro in basso delle pagine che hanno subito delle modifiche, il relativo ultimo indice di revisione. L'elenco delle pagine interessate alle relative revisioni è a pag.192. L'indice di revisione del catalogo è riportato nella IVa di copertina in basso al centro.

Revisions
For catalogue editions that include revised material, the latest relevant revision index is shown at bottom centre of the modified pages. The list of pages with revisions is shown on page 192. The index of catalogue revisions appears at bottom centre of back cover page.

Änderungen
Je Änderungstatus ist auf jedem Blatt unten, in der Mitte enthalten. Auf Seite 192 ist eine Übersicht der berechtigten Seiten enthalten. Die Änderungsliste des Katalogs ist auf die IV. Seite des Einbands unten in der Mitte enthalten.

Révisions
Les éditions des catalogues qui subissent des révisions présentent au centre, du bas des pages ayant subi des modifications, le dernier indice de révision. La liste des pages concernées par les révisions se trouve page 192. L'indice de révision du catalogue se trouve à la IVème page de couverture en bas au centre.

1.0 INTRODUZIONE

Gli oltre 40 anni di esperienza nel settore, hanno permesso alla BONFIGLIOLI RIDOTTORI di acquisire una posizione di rilievo nei mercati di tutto il mondo e di proporre, oggi, una delle più vaste offerte di soluzioni per tutte le esigenze delle trasmissioni di potenza.

Dallo studio delle varie caratteristiche applicative, dall'evoluzione delle tecniche progettuali e produttive e dalla formazione del personale, emerge la capacità della BONFIGLIOLI RIDOTTORI di esprimere nei propri prodotti una elevata tecnologia associata ora ad una rigorosa certificazione a garanzia della qualità.

Tutte queste caratteristiche, unitamente ad un approccio strategico che nei confronti delle crescenti richieste di mercato ha fornito una gamma sempre più ampia di soluzioni differenziate con un vantaggioso rapporto prestazioni / costo, hanno identificato il nome BONFIGLIOLI come sinonimo di riduttori in tutto il mondo.

1.0 INTRODUCTION

Over 40 years of experience in the field have enabled BONFIGLIOLI RIDOTTORI to win a leading position on global markets and to offer today one of the most comprehensive ranges of solutions meeting all power transmission requirements.

Study of application characteristics allied to development of design and production techniques, along with personnel training, are the essential background for BONFIGLIOLI RIDOTTORI's ability in using leading-edge technology now combined with certified quality procedures.

The sum of these characteristics backed by a strategic approach offering an increasingly broad range of different cost effective solutions in response to growing market demands, have ensured that the name BONFIGLIOLI RIDOTTORI is synonymous with gearmotors and gearboxes the world over.

1.0 EINFÜHRUNG

BONFIGLIOLI RIDOTTORI konnte dank der in mehr als 40 Jahren gesammelten Erfahrung im Bau von Getrieben eine herausragende Stellung auf den internationalen Märkten einnehmen und zeichnet sich heute durch eines der größten Angebote an Lösungen für jeden Bedarf bei der Leistungsübertragung aus.

Das eingehende Studium der Anwendungsbedingungen, die kontinuierliche Weiterentwicklung der Planungs und Herstellungstechniken und die gezielte Weiterbildung des Personals sind die Grundlage der hervorragenden technischen Eigenschaften der Produkte von BONFIGLIOLI RIDOTTORI, deren hohe Technologie durch den Qualitätssicherungsnachweis garantiert ist.

Alle diese Merkmale im Verein mit einer Unternehmensstrategie, die darauf abzielte, in Anbetracht der wachsenden Nachfrage ein sich ständig erweiterndes Angebot an Lösungen mit einem äußerst günstigen Preis/Leistungsverhältnis zur Verfügung zu stellen, haben den Namen BONFIGLIOLI in der ganzen Welt zum Synonym für Getriebe werden lassen.

1.0 INTRODUCTION

Plus de 40 années d'expérience dans le secteur ont permis à BONFIGLIOLI RIDOTTORI d'acquiescer une position de premier plan sur les marchés du monde entier et de proposer aujourd'hui l'une des palettes de solutions les plus importantes pour toutes les exigences de transmission de puissance.

La capacité de BONFIGLIOLI RIDOTTORI d'exprimer, à travers ses produits, une technologie élevée associée à une certification rigoureuse en garantie de la qualité émerge de l'étude des différentes caractéristiques d'application, de l'évolution des techniques de conception et de production ainsi que de la formation du personnel.

Toutes ces caractéristiques conjointement à une approche stratégique qui, vis à vis des demandes croissantes de marché, a fourni une gamme toujours plus vaste de solutions différenciées avec un rapport performances/coûts très favorable, ont associé le nom BONFIGLIOLI aux réducteurs dans le monde entier.

a) Personale con una elevata professionalità e competenza, avvalendosi di avanzati sistemi di progettazione, determina lo sviluppo dei prodotti.

b) L'adozione di macchine caratterizzate da una notevole flessibilità produttiva, assicura un flusso di componenti in tempi ristretti e ad un elevato livello qualitativo.

c) Tutti i componenti vengono controllati scrupolosamente con sofisticate attrezzature nell'ambito dell' Organizzazione interna della Qualità, la quale ha la funzione di gestire e migliorare le varie funzioni aziendali.

d) In attrezzatissime sale esperienze, i riduttori vengono sottoposti a cicli di funzionamento che simulano le reali condizioni di esercizio per saggiarne la resistenza e provare nuovi materiali, garantendo la corrispondenza dei dati di catalogo alle reali prestazioni.

a) Product development is assured by highly professional and competent personnel using state-of-the-art design systems.

b) Use of machinery noted for its significant production flexibility guarantees a rapid flow of components and top level quality.

c) All parts are scrupulously checked on sophisticated equipment as part of the in-house Quality Control Department, which has the task to control and improve company functions.

d) In superbly equipped testing rooms, gearboxes undergo operation cycles simulating effective duty conditions aimed at testing both resistance and new materials, to ensure that effective performance matches catalogue data.

a) Personal mit einem hohen Grad an Professionalität und Kompetenz, das sich bei der Projektierung der modernsten Systeme bedienen kann, bestimmt die Entwicklung der Produkte.

b) Der Einsatz von Maschinen mit beachtlicher Erzeugnisflexibilität gewährleistet einen hohen Durchsatz der Komponenten bei zugleich optimalem qualitativem Niveau.

c) Alle Komponenten werden im Rahmen der werksinternen Qualitätssicherung mit anspruchsvollen Geräten strengsten Prüfungen unterzogen. Es ist die Aufgabe des Qualitätsmanagements, die verschiedenen Qualitätssicherungselemente zu verwalten und ständig den sich ändernden Anforderungen anzupassen.

d) Die Getriebe werden auf bestens ausgestatteten Prüfständen strengen Betriebsprüfungen unterzogen, wobei reale Betriebsbedingungen simuliert werden, um die Widerstandsfähigkeit der verwendeten Werkstoffe zu testen und neue Materialien auszuprobieren, damit die Übereinstimmung der Katalogangaben mit den tatsächlichen Leistungsmerkmalen garantiert werden kann.

a) Un personnel, d' un professionnalisme et d' une compétence élevés, utilisant des systèmes de conception très évolués travaille au développement des produits.

b) L' adoption de machines caractérisées par une remarquable flexibilité de production, assure un flux de composants dans des délais très courts avec un niveau de qualité élevé.

c) Tous les composants sont contrôlés scrupuleusement avec des équipements sophistiqués dans le cadre de l' Organisation interne de la Qualité, dont la fonction est de gérer et d' améliorer les différentes fonctions d' entreprise.

d) Dans des salles d' essai hautement équipées, les réducteurs sont soumis à des cycles qui simulent les conditions réelles de fonctionnement pour en tester la résistance et essayer de nouveaux matériaux, en garantissant la correspondance des données du catalogue avec les performances réelles.

| x | [mm] | Distanza di applicazione del carico dallo spallamento albero | Load application distance from shaft shoulder | Abstand des Kraftangriffspunktes vom Wellenansatz | Distance d'application de la charge par rapport à l'épaulement de l'arbre | | |
| Z | [1/h] | Numero di avviamenti ammissibile del motore considerando un carico | Number of permitted motor starts in loaded conditions | Zulässige Schalthäufigkeit des Motors bei einer bestimmten Last | Nombre de démarrages admissibles du moteur en considérant une charge | | |
| Z _r | [1/h] | Numero di avviamenti | Number of starts | Schaltungen/Stunde | Nombre de démarrages | | |
| η _D | | Rendimento dinamico | Dynamic efficiency | Dynamischer Wirkungsgrad | Rendement dynamique | | |
| η _S | | Rendimento statico | Static efficiency | Statischer Wirkungsgrad | Rendement statique | | |

Questo simbolo riporta i riferimenti angolari per l'indicazione della direzione del carico radiale (l'albero è visto di fronte).

This symbol indicates the radial load direction angle references. (shaft front-view).

Dieses Symbol gibt die Winkelbezugswerte für die Angabe der Richtung der Radialkräfte an (Stirnansicht der Welle).

Ce symbole présente les références angulaires pour l'indication de la direction de la charge radiale (l'arbre est vu de face).

Simbolo riferito ai pesi dei riduttori e dei motoriduttori. I valori riportati nelle tabelle dei motoriduttori sono comprensivi sia del peso del motore a 4 poli sia del peso del lubrificante contenuto, qualora previsto dalla BONFIGLIOLI RIDUTTORI.

Symbol referring to weights of gearmotors and gearboxes. The values indicated in the gearmotor tables include the weight of the 4-pole motor plus lubricant, if supplied by BONFIGLIOLI RIDUTTORI.

Symbol für das Gewicht der Getriebe und der Getriebemotoren. Die in der Getriebemotoren-Tabelle genannten Werte schließen das Gewicht des vierpoligen Motors und die eingefüllte Schmierstoffmenge ein, sofern von BONFIGLIOLI RIDUTTORI vorgesehen.

Symbole se référant aux poids des réducteurs et des motoréducteurs. Les valeurs indiquées dans les tableaux des motoréducteurs comprennent tant le poids du moteur à 4 pôles que le poids du lubrifiant contenu, lorsque prévu par BONFIGLIOLI RIDUTTORI.

Le colonne contrassegnate da questo simbolo indicano i numeri di pagina dove sono riportate le dimensioni dei riduttori selezionati.

Columns marked with this symbol indicate the reference page showing the dimensions of the selected unit.

Die mit diesem Symbol gekennzeichneten Spalten geben die Nummern der Seiten mit den Maßangaben der gewählten Getriebe an.

Les colonnes portant ce symbole indiquent les numéros de page où sont mentionnées les dimensions des réducteurs sélectionnés.

I codici per ricercare nel listino i prezzi dei riduttori e motoriduttori sono riportati nelle colonne contrassegnate da questo simbolo.

Columns marked with this symbol contain codes for tracing prices of gearboxes and gearmotors in the price list.

Die Artikelnummern zum Auffinden der Getriebe und Getriebemotoren in der Preisliste werden in den mit diesem Symbol gekennzeichneten Spalten aufgeführt.

Les codes pour rechercher les prix des réducteurs et des motoréducteurs dans la liste des prix sont indiqués dans les colonnes portant ce symbole.

INFORMAZIONI GENERALI

I paragrafi che seguono riportano una serie di informazioni sugli elementi indispensabili per la scelta e il corretto utilizzo dei motoriduttori. Indicazioni specifiche relative alle varie tipologie di riduttori potranno essere ricercate nei capitoli di pertinenza.

GENERAL INFORMATION

The following headings contain information on essential elements for selection and correct use of gearmotors. For specific data on the gearbox range, see the relevant chapters.

ALLGEMEINE INFORMATIONEN

Die folgenden Abschnitte enthalten eine Reihe von Informationen über die Aspekte, die in Hinblick auf die Wahl und den sachgemäßen Betrieb von Getriebemotoren unbedingt zu berücksichtigen sind. Die spezifische Informationen über die verschiedenen Getriebearten sind den zugehörigen Kapiteln zu entnehmen.

INFORMATIONS GENERALES

Les paragraphes qui suivent présentent une série d'informations sur les éléments indispensables pour le choix et l'utilisation correcte des motoréducteurs. Des indications spécifiques relatives aux différentes typologies de réducteurs pourront être recherchées dans les chapitres respectifs.

3.0 COPPIA IN USCITA

3.1 Coppia nominale
 M_{n2} [Nm]

E' la coppia trasmissibile in uscita con carico continuo uniforme riferita alla velocità in ingresso n_1 e a quella corrispondente in uscita n_2 . E' calcolata in base ad un fattore di sicurezza $S = 1$.

3.0 OUTPUT TORQUE

3.1 Nominal torque
 M_{n2} [Nm]

Torque transmitted at output at uniform continuous load, referred to input speed n_1 and corresponding output speed n_2 . It is calculated according to a safety factor $S = 1$.

3.0 ABTRIEBSMOMENT

3.1 Nenn-Drehmoment
 M_{n2} [Nm]

Dies ist das an der Abtriebswelle übertragbare Drehmoment bei gleichförmiger Dauerbelastung bezogen auf die Antriebsdrehzahl n_1 und die entsprechende Abtriebsdrehzahl n_2 . Das Drehmoment wird auf Grundlage eines Sicherheitsfaktors $S = 1$ berechnet.

3.0 COUPLE EN SORTIE

3.1 Couple nominal
 M_{n2} [Nm]

C'est le couple transmissible en sortie avec une charge continue uniforme se référant à la vitesse en entrée n_1 et à celle correspondante en sortie n_2 . Il est calculé sur la base d'un facteur de sécurité $S = 1$.

3.2 Coppia richiesta
 M_{r2} [Nm]

Rappresenta la coppia richiesta dall'applicazione e dovrà sempre essere uguale o inferiore alla coppia in uscita nominale M_{n2} del riduttore scelto.

3.2 Required torque
 M_{r2} [Nm]

This is the torque corresponding to application requirements. It must always be equal to or less than rated output torque M_{n2} of the selected gearbox.

3.2 Verlangtes Drehmoment
 M_{r2} [Nm]

Dies ist das von der Anwendung verlangte Drehmoment, das stets kleiner oder gleich dem Nenn-Abtriebsmoment M_{n2} des gewählten Getriebes sein muß.

3.2 Couple requis
 M_{r2} [Nm]

Il représente le couple requis par l'application et devra toujours être inférieur ou égal au couple en sortie nominal M_{n2} du réducteur choisi.

3.3 Coppia di calcolo
 M_{c2} [Nm]

E' il valore di coppia da utilizzare per la selezione del riduttore considerando la coppia richiesta M_{r2} e il fattore di servizio f_s ed è dato dalla formula:

$M_{c2} = M_{r2} \cdot f_s < M_{n2}$ (1)

3.3 Calculated torque
 M_{c2} [Nm]

Torque value to be used for selecting the gearbox, considering required torque M_{r2} and service factor f_s , and is obtained by formula:

$M_{c2} = M_{r2} \cdot f_s < M_{n2}$ (1)

3.3 Soll-Drehmoment
 M_{c2} [Nm]

Dies ist das bei der Wahl des Getriebes zugrunde zu legendere Drehmoment, wobei das übertragene Drehmoment M_{r2} und der Betriebsfaktor f_s zu berücksichtigen sind; das Soll-Drehmoment wird mit folgender Gleichung berechnet:

$M_{c2} = M_{r2} \cdot f_s < M_{n2}$ (1)

3.3 Couple de calcul
 M_{c2} [Nm]

C'est la valeur de couple à utiliser pour la sélection du réducteur en considérant le couple requis M_{r2} et le facteur de service f_s et s'obtient avec la formule:

$M_{c2} = M_{r2} \cdot f_s < M_{n2}$ (1)

4.0 POTENZA

4.1 Potenza in entrata
 P_{n1} [kW]

Nelle tabelle di selezione dei riduttori è la potenza applicabile in entrata riferita alla velocità n_1 e considerando un fattore di servizio $f_s = 1$.

4.2 Potenza in uscita
 P_{n2} [kW]

Questo valore rappresenta la potenza trasmessa all'uscita del riduttore. Si può calcolare con le seguenti formule:

$$P_{n2} = P_{n1} \cdot \eta_D \quad (2)$$

$$P_{n2} = \frac{M_{n2} \cdot n_2}{9550} \quad (3)$$

5.0 POTENZA TERMICA
 P_t [kW]

È il valore che indica il limite termico del riduttore (riferirsi alle tabelle riportate nei capitoli relativi ai riduttori in esame) ed è la potenza trasmissibile in servizio continuo ad una temperatura ambiente massima di 40°C senza ricorrere ad un raffreddamento ausiliare.

Per un tipo di servizio caratterizzato da una breve durata di funzionamento e da un tempo di sosta sufficientemente lungo da consentire il raffreddamento del gruppo, la potenza termica acquista scarsa rilevanza per cui può non essere tenuta in considerazione.

Se la temperatura ambiente è inferiore a 40°C e se il servizio è intermittente, è possibile migliorare il valore di P_t in base ai fattori termici f_t riportati nella tabella (A1) verificando però che sia sempre soddisfatta la condizione

$$P_{r1} \leq P_t \cdot f_t \quad (4)$$

(A1)

| | | f_t | | | |
|---|--|---|-----|-----|-----|
| ta max. [°C] ta max. [°C] ta max. [°C] ta maxi. [°C] | Serv. continuo Continuous duty Dauerbetrieb Serv. continu | Servizio intermittente / Intermittent duty Aussetzbetrieb / Service intermittent | | | |
| | | Grado di intermittenza % (I) / Degree of intermittence % (I) Relative Einschaltdauer % (I) / Degrè d'intermittence % (I) | | | |
| | | 80 | 60 | 40 | 20 |
| 40 | 1.0 | 1.1 | 1.3 | 1.5 | 1.6 |
| 30 | 1.1 | 1.3 | 1.5 | 1.6 | 1.8 |
| 20 | 1.3 | 1.5 | 1.6 | 1.8 | 2.0 |
| 10 | 1.5 | 1.6 | 1.8 | 2.0 | 2.3 |

Il rapporto di intermittenza (I)% è dato dal rapporto fra il tempo di funzionamento a carico t_f e il tempo totale espresso in percentuale:

$$I = \frac{t_f}{t_f + t_r} \cdot 100 \quad (5)$$

4.0 POWER

4.1 Input rated power
 P_{n1} [kW]

In the gearbox selection charts, this is the applicable power at input referred to speed n_1 and considering a service factor of $f_s = 1$.

4.2 Output power
 P_{n2} [kW]

This value is the power transmitted at gearbox output. It can be calculated with the following formulas:

$$P_{n2} = P_{n1} \cdot \eta_D \quad (2)$$

$$P_{n2} = \frac{M_{n2} \cdot n_2}{9550} \quad (3)$$

5.0 THERMAL POWER
 P_t [kW]

This value indicates the gearbox's thermal limit (see tables in chapters on the reduction units under consideration) and corresponds to the power transmission capacity under continuous duty at a maximum ambient temperature of 40°C without using a supplementary cooling facility.

For a duty with short operating periods and sufficiently long pauses to allow the unit to cool, thermal power is not particularly important and therefore it does not need to be taken into consideration.

If ambient temperature is lower than 40°C and duty is intermittent, P_t value can be increased according to thermal factors f_t shown in tables (A1) provided you check that the following condition is always satisfied.

$$P_{r1} \leq P_t \cdot f_t \quad (4)$$

4.0 LEISTUNG

4.1 Leistung Antriebswelle
 P_{n1} [kW]

In den Tabellen für die Wahl der Getriebe ist die an der Antriebswelle übertragbare Leistung auf die Drehzahl n_1 bezogen und es wurde ein Betriebsfaktor $f_s = 1$ angenommen.

4.2 Leistung Abtriebswelle
 P_{n2} [kW]

Dieser Wert repräsentiert die an der Abtriebswelle des Getriebes übertragene Leistung. Dieser Wert kann folgendermaßen berechnet werden:

$$P_{n2} = P_{n1} \cdot \eta_D \quad (2)$$

$$P_{n2} = \frac{M_{n2} \cdot n_2}{9550} \quad (3)$$

5.0 THERMISCHE GRENZLEISTUNG
 P_t [kW]

Dieser Wert gibt die max. zulässige übertragbare Leistung für das Getriebe im Dauerbetrieb (siehe die Tabellen in den zu den betreffenden Getrieben gehörigen Kapiteln) und bei einer maximalen Umgebungstemperatur von 40°C ohne Zusatzkühlung an.

Bei Dauerbetrieb, der durch kurze Betriebszeiten und für die Abkühlung der Baugruppe ausreichend lange Aussetzzeiten gekennzeichnet ist, hat die Wärmegrenzleistung nur geringe Bedeutung und kann deshalb vernachlässigt werden.

Wenn die Umgebungstemperatur unter 40°C liegt und das Getriebe im Aussetzbetrieb betrieben wird, kann der Wert für P_t in Abhängigkeit von den Wärmefaktoren f_t , die in Tabelle (A1) angegeben sind, erhöht werden, wobei allerdings sicherzustellen ist, daß die genannten Bedingungen stets eingehalten werden.

$$P_{r1} \leq P_t \cdot f_t \quad (4)$$

4.0 APUISNCE

4.1 Puissance en entrée
 P_{n1} [kW]

Dans les tableaux de sélection des réducteurs, c'est la puissance applicable en entrée se rapportant à la vitesse n_1 et en considérant un facteur de service $f_s = 1$.

4.2 Puissance en sortie
 P_{n2} [kW]

Cette valeur représente la puissance transmise à la sortie du réducteur. On peut la calculer avec les formules suivantes:

$$P_{n2} = P_{n1} \cdot \eta_D \quad (2)$$

$$P_{n2} = \frac{M_{n2} \cdot n_2}{9550} \quad (3)$$

5.0 PUISSANCE THERMIQUE
 P_t [kW]

C'est la valeur qui indique la limite thermique du réducteur (se référer aux tableaux présentés dans les chapitres relatifs aux réducteurs concernés) et c'est la puissance transmissible en service continu à une température ambiante maximum de 40°C sans recourir à un refroidissement auxiliaire.

Pour un type de service continu caractérisé par une durée de fonctionnement brève et par un temps de pause suffisamment long pour permettre le refroidissement du groupe, la puissance thermique ne revêt qu'une faible importance et peut par conséquent, ne pas être prise en considération.

Si la température ambiante est inférieure à 40°C et si le service est intermittent, il est possible d'augmenter la valeur de P_t sur la base des facteurs thermiques f_t rapportés dans le tableau (A1) en vérifiant toutefois que la condition suivante

$$P_{r1} \leq P_t \cdot f_t \quad (4) \text{ soit toujours satisfaite.}$$

6.0 RENDIMENTO

6.1 Rendimento dinamico η_D

E' dato dal rapporto fra la potenza in uscita P_2 e quella in entrata P_1 secondo la relazione:

$$\eta_D = \frac{P_2}{P_1} \quad (6)$$

In particolare, è opportuno ricordare che i dati di coppia M_{n2} a catalogo sono stati calcolati in base al rendimento dinamico η_D che si ha sui gruppi funzionanti a regime dopo rodaggio.

6.2 Rendimento statico η_s

E' il rendimento che si ha all'avviamento del riduttore e, se può essere trascurato nei riduttori ad ingranaggi, deve essere tenuto in particolare considerazione nella scelta di motorizzazioni con riduttori a vite senza fine destinate ad applicazioni caratterizzate da un tipo di servizio intermittente (es. sollevamenti).

7.0 RAPPORTO DI RIDUZIONE i

E' una caratteristica del riduttore la cui identificazione si ha nel rapporto

$$i = \frac{n_1}{n_2} \quad (7)$$

8.0 VELOCITÀ ANGOLARE

8.1 Velocità in entrata n_1 [min^{-1}]

E' la velocità relativa al tipo di motorizzazione scelta; i valori di catalogo si riferiscono alle velocità dei motori elettrici comunemente usati a singola e doppia polarità.

Se il riduttore riceve il moto da una trasmissione in entrata, è sempre preferibile adottare velocità inferiori a 1400 min^{-1} al fine di garantire condizioni ottimali di funzionamento.

Velocità in entrata superiori sono ammesse considerando il naturale declassamento della coppia nominale M_{n2} del riduttore.

Per ulteriori dettagli si rimanda ai capitoli relativi a ciascuna serie di riduttori.

8.2 Velocità in uscita n_2 [min^{-1}]

E' in funzione della velocità in entrata n_1 e del rapporto di riduzione i secondo la relazione

$$n_2 = \frac{n_1}{i} \quad (8)$$

9.0 MOMENTO D'INERZIA J_r [Kgm^2]

I momenti d'inerzia indicati a catalogo sono riferiti all'asse di entrata del riduttore per cui, nel caso di accoppiamento diretto, sono già rapportati alla velocità del motore.

6.0 EFFICIENCY

6.1 Dynamic efficiency η_D

Obtained from the proportion of output power P_2 to input power P_1 according to the following equation:

$$\eta_D = \frac{P_2}{P_1} \quad (6)$$

It is important to remember that torque data M_{n2} specified in the catalogue were calculated according to dynamic efficiency η_D obtained with units operating at normal speed after running-in.

6.2 Static efficiency η_s

Efficiency obtained at start-up of the gearbox. Although this is not significant in helical gear units, it is a very important element in the selection of motor size to be connected to worm gearboxes for use in intermittent duty applications (e.g. hoisting).

7.0 REDUCTION RATIO i

A gearbox characteristic, obtained from the following equation:

$$i = \frac{n_1}{n_2} \quad (7)$$

8.0 ANGULAR SPEED

8.1 Input speed n_1 [min^{-1}]

Speed is related to the type of drive unit selected. Catalogue values refer to speed of electric motors normally used with single or double polarity. If the gearbox is driven by an external transmission, it is always preferable to use speeds below 1400 min^{-1} in order to ensure optimum operating conditions.

Higher input speeds are permitted only considering the natural derating of the gearbox's rated torque M_{n2} . For further details, see the chapters covering each series of gearbox.

8.2 Output speed n_2 [min^{-1}]

Deriving from input speed n_1 and transmission ratio i according to the following equation

$$n_2 = \frac{n_1}{i} \quad (8)$$

9.0 MOMENT OF INERTIA J_r [Kgm^2]

Moments of inertia specified in the catalogue refer to the reduction unit input axis. They are therefore related to motor speed, in the case of direct motor mounting.

6.0 WIRKUNGSGRAD

6.1 Dynamischer Wirkungsgrad η_D

Er ist gegeben durch das Verhältnis der Abtriebsleistung P_2 zur Antriebsleistung P_1 :

$$\eta_D = \frac{P_2}{P_1} \quad (6)$$

Es soll hier insbesondere daran erinnert werden, daß die Katalogangaben für das Drehmoment M_{n2} auf Basis des dynamischen Wirkungsgrads η_D nach der Einlaufphase berechnet wurden.

6.2 Statischer Wirkungsgrad η_s

Dies ist der Wirkungsgrad beim Anlaufen des Getriebes, der, obgleich er bei Zahnradgetrieben vernachlässigt werden kann, bei der Wahl von Antrieben mit Schneckengetrieben, die für den Aussetzbetrieb (z.B. Hubbetrieb) bestimmt sind, besondere Beachtung verdient.

7.0 ÜBERSETZUNG i

Dieses Merkmal des Getriebes wird durch das folgende Verhältnis ausgedrückt:

$$i = \frac{n_1}{n_2} \quad (7)$$

8.0 DREHZAHL

8.1 Drehzahl Antriebswelle n_1 [min^{-1}]

Dies ist die vom gewählten Motor-typ abhängige Drehzahl. Die Katalogangaben beziehen sich auf die Drehzahl von allgemein-üblichen eintourigen Elektromotoren oder von polumschaltbaren Elektromotoren.

Um optimale Betriebsbedingungen zu gewährleisten, ist stets eine Antriebsdrehzahl unter 1400 min^{-1} zu empfehlen.

Höhere Antriebsdrehzahlen sind zulässig, wobei die zwangsläufige Herabsetzung des Nenn-Abtriebsdrehmoments M_{n2} des Getriebes zu berücksichtigen ist. Weitere Details sind den Kapiteln für die verschiedenen Getriebeserien zu entnehmen.

8.2 Abtriebsdrehzahl n_2 [min^{-1}]

Sie ist abhängig von der Antriebsdrehzahl n_1 und dem Übersetzungs i nach folgender Gleichung:

$$n_2 = \frac{n_1}{i} \quad (8)$$

9.0 TRÄGHEITSMOMENT J_r [Kgm^2]

Die im Katalog angegebenen Trägheitsmomente sind auf die Antriebswelle des Getriebes bezogen und daher im Falle einer direkten Verbindung schon zur Motordrehzahl in Beziehung gesetzt.

6.0 RENDEMENT

6.1 Rendement dynamique η_D

Il est donné par le rapport entre la puissance en sortie P_2 et celle en entrée P_1 :

$$\eta_D = \frac{P_2}{P_1} \quad (6)$$

En particulier, il est opportun de rappeler que les caractéristiques de couple M_{n2} du catalogue ont été calculées sur la base du rendement dynamique η_D que l'on obtient sur les groupes fonctionnant en régime après rodage.

6.2 Rendement statique η_s

C'est le rendement que l'on obtient au démarrage du réducteur et, s'il peut être négligé pour les réducteurs à engrenages, il doit être pris en considération dans le choix des motorisations avec réducteurs à vis sans fin destinés aux applications caractérisées par un type de service intermittent (ex. levages).

7.0 RAPPORT DE REDUCTION i

C'est une caractéristique du réducteur dont l'identification est obtenue avec l'équation

$$i = \frac{n_1}{n_2} \quad (7)$$

8.0 VITESSE ANGULAIRE

8.1 Vitesse d'entrée n_1 [min^{-1}]

C'est la vitesse relative au type de motorisation choisie. Les valeurs de catalogue se réfèrent aux vitesses des moteurs électriques à simple et double polarité communément utilisés.

Si le réducteur reçoit le mouvement d'une transmission en entrée, il est toujours préférable d'adopter des vitesses inférieures à 1400 min^{-1} afin de garantir des conditions optimales de fonctionnement.

Des vitesses d'entrée supérieures sont admises en considérant le déclassement naturel du couple nominal M_{n2} du réducteur. Pour de plus amples détails, nous renvoyons aux chapitres relatifs à chaque série de réducteurs.

8.2 Vitesse en sortie n_2 [min^{-1}]

Elle varie en fonction de la vitesse d'entrée n_1 et du rapport de réduction i selon l'équation:

$$n_2 = \frac{n_1}{i} \quad (8)$$

9.0 MOMENT D'INERTIE J_r [Kgm^2]

Les moments d'inertie indiqués dans le catalogue se réfèrent à l'axe d'entrée du réducteur par conséquent, dans le cas d'accouplement direct, ils se rapportent déjà à la vitesse du moteur.

10.0 FATTORE DI SERVIZIO f_s

E' il fattore che tiene in considerazione, con sufficiente approssimazione, la variabilità del carico e gli eventuali urti a cui è sottoposto il riduttore per un determinato tipo di servizio.

Nel grafico della tabella (A2), dall'intersezione della linea corrispondente al numero di inserzioni/ora (avviamenti e arresti) con una delle curve (K1, K2, K3), che identificano la natura del carico in funzione del fattore di accelerazione delle masse K, si potrà leggere nel grafico il valore del fattore di servizio f_s riferito al numero di ore di funzionamento giornaliere.

Eventuali valori intermedi potranno essere ottenuti per interpolazione.

10.0 SERVICE FACTOR f_s

This factor takes into consideration, with sufficient approximation, load variations and eventual shocks the gearbox may undergo for a specific type of duty.

In the graph in table (A2), at the intersection of the line denoting the number of starts/stops per hour with one of the curves (K1, K2, K3) identifying the type of load based on the acceleration factor of masses K, the value of duty factor f_s is indicated as a function of daily operating hours. Intermediate values can be obtained by interpolation.

10.0 BETRIEBSFAKTOR f_s

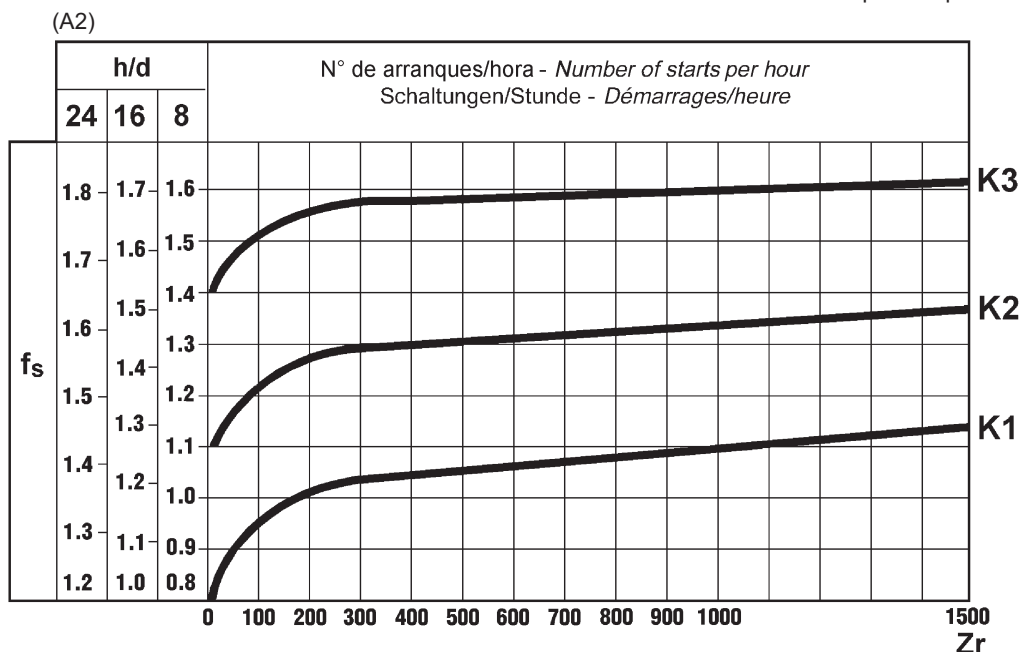

Der Betriebsfaktor berücksichtigt mit hinreichender Annäherung die Lastschwankungen und eventuelle Stöße, denen das Getriebe unter bestimmten Anwendungsbedingungen ausgesetzt ist.

In der Graphik von Tabelle (A2) kann man am Schnittpunkt der Senkrechten für die Schaltungen pro Stunde (Starts und Stopps) mit den Kurven (K1, K2, K3), die die Art der Belastung in Abhängigkeit vom Beschleunigungsfaktor der Massen K charakterisieren, den Betriebsfaktor f_s bezogen auf die täglichen Betriebsstunden ablesen. Eventuelle Zwischenwerte erhält man durch Interpolation.

10.0 FACTEUR DE SERVICE f_s

C'est le facteur qui prend en considération avec une approximation suffisante, la variation de la charge et les éventuels chocs auxquels est soumis le réducteur pour un type de service déterminé.

Sur le graphique du tableau (A2), à l'intersection de la ligne correspondant au nombre d'insertions/heure (démarrages et arrêts) avec l'une des courbes (K1, K2, K3) qui identifient la nature de la charge en fonction du facteur d'accélération des masses K, on pourra lire sur le graphique la valeur du facteur de service f_s se référant au nombre d'heures de fonctionnement quotidiennes. Les éventuelles valeurs intermédiaires pourront être obtenues par interpolation.

10.1 Fattore di accelerazione delle masse K

Serve per la determinazione del fattore di servizio e si ricava dalla relazione:

$$K = \frac{J_c}{J_m} \quad (9)$$

dove:

J_c [Kgm²] momento d'inerzia dinamico delle masse comandate rapportato alla velocità del motore applicato

J_m [Kgm²] momento d'inerzia del motore

K1 carico uniforme $K \leq 0.25$ (10)

K2 carico con urti moderati $0.25 < K \leq 3$ (11)

K3 carico con forti urti $3 < K \leq 10$ (12)

Per valori di $K > 10$ vi invitiamo a contattare il nostro servizio tecnico.

10.1 Acceleration factor of masses K

Used for establishing the service factor and obtained from the following equation:

$$K = \frac{J_c}{J_m} \quad (9)$$

where:

J_c [Kgm²] dynamic moment of inertia of the driven masses in proportion to the speed of the applied motor

J_m [Kgm²] motor moment of inertia

K1 uniform load $K \leq 0.25$ (10)

K2 moderate shock load $0.25 < K \leq 3$ (11)

K3 heavy shock load $3 < K \leq 10$ (12)

For $K > 10$ values, please contact our technical assistance service.

10.1 Beschleunigungsfaktor der Massen K

Dieser Faktor dient zur Bestimmung des Betriebsfaktors und ergibt sich aus folgender Gleichung:

$$K = \frac{J_c}{J_m} \quad (9)$$

wobei gilt:

J_c [kgm²] dynamisches Trägheitsmoment der angetriebenen Massen, bezogen auf die Motordrehzahl;

J_m [kgm²] Trägheitsmoment des Motors

K1 gleichmäßige Belastung $K \leq 0.25$ (10)

K2 Belastung mit mäßigen $0.25 < \text{Stößen } K \leq 3$ (11)

K3 Belastung mit starken $3 < \text{Stößen } K \leq 10$ (12)

Bei Werten für $K > 10$ bitte unseren Technischen Kunden-dienst zu Rate ziehen.

10.1 Facteur d'accélération des masses K

Il sert pour déterminer le facteur de service et s'obtient avec l'équation suivante:

$$K = \frac{J_c}{J_m} \quad (9)$$

où:

J_c [Kgm²] est le moment d'inertie dynamique des masses entrainées rapporté à la vitesse du moteur appliqué

J_m [Kgm²] est le moment d'inertie du moteur

K1 charge uniforme $K \leq 0.25$ (10)

K2 charge avec chocs modérés $0.25 < K \leq 3$ (11)

K3 charge avec chocs violents $3 < K \leq 10$ (12)

Pour les valeurs de $K > 10$, nous vous invitons à contacter notre service technique.

11.0 LUBRIFICAZIONE

I riduttori BONFIGLIOLI prevedono una lubrificazione a bagno d'olio. Nelle posizioni di montaggio che prevedono i riduttori con un asse verticale, dove lo sbattimento dell'olio durante il funzionamento non sarebbe sufficiente a garantire la corretta lubrificazione dei cuscinetti superiori, vengono adottati adeguati sistemi di lubrificazione.

Alcune grandezze di riduttori sono fornite con lubrificazione permanente e sprovviste dei tappi di carico, livello e scarico olio.

Questi riduttori, forniti con una lubrificazione "long life" (a base sintetica) possono funzionare ad una temperatura ambiente t_a compresa fra 0 °C e +50 °C. Per temperature inferiori a 0°C consultare il ns. Servizio Tecnico.

Nei riduttori per i quali è previsto il carico olio a cura dell'utilizzatore immettere, prima della messa in opera, la giusta quantità di lubrificante riferendosi alla tabella (V13). A tal proposito i riduttori sono muniti dei tappi di carico, livello e scarico olio.

Al fine di predisporre il corretto orientamento dei tappi, per una adeguata lubrificazione, consigliamo di precisare sempre la posizione di montaggio desiderata (riportata nel capitolo 6.2).

11.0 LUBRICATION

BONFIGLIOLI gearboxes are oil-bath lubricated. For applications calling for gearboxes with a vertically positioned axis, in which oil coverage during operation would not be sufficient to ensure correct lubrication of upper bearings, suitable life lubrication systems are used.

Some gearbox sizes are supplied with life lubrication and do not have oil fill, level, and drain plugs. These long-life lubricated units (using synthetic oil) are capable of operating at an ambient temperature range t_a of 0°C to +50°C. For temperatures below 0°C, contact our Technical Service.

Gearboxes requiring oil filling by the user, before start-up, must be filled with the correct quantity of oil, as per table (V13). These gearboxes are provided with oil fill, level, and drain plugs.

To enable fitting of plugs in suitable positions for adequate lubrication, customers should always specify the required mounting position (mentioned in chapter 6.2).

11.0 SCHMIERUNG

Alle BONFIGLIOLI Getriebe weisen eine Ölbadsschmierung auf. Werden die Getriebe mit vertikaler Achse eingebaut, so daß nicht gewährleistet werden kann, daß das Öl während des Betriebs des Getriebes auch die oberen Lager ordnungsgemäßschmiert, werden entsprechende Dauerschmierungen vorgesehen.

In einigen Größen sind die Getriebe dauergeschmiert und haben daher keinen Einfüllverschluß, keine Ölstand und Ölablaßschraube. Diese mit Long-life-Schmierung (mit syntetischen Basis) gelieferten Getriebe können bei einer Umgebungstemperatur t_a zwischen 0°C und +50°C betrieben werden. Bei Temperaturen unter 0°C unseren Technischen Kundendienst zu Rate ziehen.

Bei den Getrieben, bei denen das Öl vom Kunden eingefüllt werden muß, vor dem Einbau die erforderliche Menge Öl einfüllen; die Angaben in Hinblick auf die Viskosität sind der Tabelle (V13) zu entnehmen. Diese Getriebe verfügen über Einfüllverschluß, Ölstand und Ölablaßschraube.

Damit die genannten Verschlüsse werkseitig so angeordnet werden können, daß eine angemessene Schmierung gewährleistet werden kann, sollte stets die vorgegebene Einbaulage angegeben werden (siehe das Kapitel 6.2).

11.0 LUBRIFICATION

Les réducteurs BONFIGLIOLI prévoient une lubrification en bain d'huile. Dans les positions de montage qui prévoient les réducteurs avec axe vertical, où le barbotage de l'huile pendant le fonctionnement serait insuffisant pour garantir une lubrification correcte des paliers supérieurs, l'on adopte des systèmes appropriés de graissage à vie.

Certaines tailles de réducteurs sont prévues avec une lubrification permanente et sont dépourvus de bouchons de remplissage, de niveau et de vidange de l'huile. Ces réducteurs, avec une lubrification "long life" (avec lubrifiant syntetic) peuvent fonctionner à une température ambiante t_a comprise entre 0°C et +50°C. Pour des températures inférieures à 0°C, consulter notre Service Technique.

Dans les réducteurs pour lesquels l'adjonction du lubrifiant est à la charge de l'utilisateur, introduire, avant la mise en marche, la juste quantité de lubrifiant reportée dans le tableau (V13). A cette fin, les réducteurs sont dotés de bouchons de remplissage, de niveau et de vidange huile.

Afin de predisposer l'orientation correcte des bouchons, pour une lubrification appropriée, nous conseillons de toujours préciser la position de montage désirée (reportée dans le chapitre 6.2).

(A3)

| Tipo di carico / Type of Load Art der Belastung / Type de charge | 0 °C - 20 °C t_a | | 20 °C - 40 °C t_a | |
|---|---|--|---|--|
| | Olio minerale Mineral oil Mineralöl Huile minérale ISO VG | Olio sintetico Synthetic oil Syntheseöl Huile synthétique ISO VG | Olio minerale Mineral oil Mineralöl Huile minérale ISO VG | Olio sintetico Synthetic oil Syntheseöl Huile synthétique ISO VG |

| Carico medio / Medium load / Normal / charge moyenne | 150 | 150 | 320 | 220 |
| Carico pesante / Heavy load / Schwer / Charge lourde | 200 | 200 | 460 | 320 |

12.0 MANUTENZIONE

I riduttori forniti con lubrificazione permanente non necessitano di sostituzioni periodiche dell'olio. Per gli altri si consiglia di effettuare una prima sostituzione del lubrificante dopo circa 300 ore di funzionamento provvedendo ad un accurato lavaggio interno del gruppo con adeguati detergenti. Evitare di miscelare olii a base minerale con olii sintetici. Controllare periodicamente il livello del lubrificante effettuando la sostituzione indicativamente agli intervalli riportati nella tabella (A4).

12.0 MAINTENANCE

Life lubricated gearboxes do not require any periodic oil changes. For other types of gearboxes, the first oil change must take place after about 300 hours of operation, carefully flushing the gear unit using suitable detergents. Do not mix mineral oils with synthetic oils. Check oil level regularly and change oil at the intervals shown in the table (A4).

12.0 WARTUNG

Die mit Dauerschmierung gelieferten Getriebe bedürfen periodische Ölwechsel. Bei den übrigen Getrieben wird ein erster Ölwechsel nach ca. 300 Betriebsstunden empfohlen, wobei das Innere der Gruppe sorgfältig mit einem geeigneten Reinigungsmittel zu waschen ist. Mineralöle nicht mit Syntheseölen mischen. Den Ölstand regelmäßig kontrollieren. Die Ölwechsel in den in der Tabelle (A4) angegebenen Fristen durchführen.

12.0 ENTRETIEN

Les réducteurs fournis avec lubrification permanente n'ont besoin d'aucun remplacement périodique de huile. Pour les autres, nous conseillons d'effectuer une première vidange du lubrifiant après les 300 premières heures de fonctionnement en réalisant un lavage soigné à l'intérieur du groupe avec des produits détergents appropriés. Eviter de mélanger les huiles à base minérale avec des huiles synthétiques. Contrôler périodiquement le niveau du lubrifiant en effectuant les vidanges conformément aux intervalles indiqués dans le tableau (A4S).

(A4)

| 65 - 80 | 4000 | 15000 |
| 80 - 95 | 2000 | 12500 |

13.0 SCELTA

Per selezionare correttamente un riduttore o un motoriduttore, è necessario disporre di alcuni dati fondamentali che abbiamo sintetizzato nella tabella (A5).
In particolare, essa potrà essere compilata ed inviata in copia al ns. Servizio Tecnico che provvederà alla ricerca della motorizzazione più idonea alla applicazione indicata.

13.0 SELECTION

Some fundamental data are necessary to assist the correct selection of a gearbox or gearmotor. The table below (A5) briefly sums up this information.
To simplify matters, fill in the table and send a copy to our Technical Service department which will select the most suitable drive unit for your application requirements.

13.0 ANTRIEBSAUSWAHL

Um die Getriebe und Getriebemotoren richtig auszuwählen zu können, muß man über einige grundlegende Daten verfügen, die wir in der Tabelle (A5) zusammengefaßt haben.
Eine Kopie dieser vom Kunden ausgefüllten Tabelle kann an unseren Technischen Kundendienst geschickt werden, der dann die für die gewünschte Anwendung geeignete Auslegung wählt.

13.0 SELECTION

Pour sélectionner correctement un réducteur ou un motoréducteur, il est nécessaire de disposer de certaines données fondamentales que nous avons résumé dans le tableau (A5).
En particulier, ce dernier pourra être rempli et retourné à notre service technique qui recherchera la motorisation la plus appropriée à l'application indiquée.

Al fine di effettuare una corretta selezione delle motorizzazioni, si consiglia di operare come segue.

Recommended procedure for correct selection of drive unit:

Für eine korrekte Wahl der Auslegung folgender Maßen vorgehen:

Afin d'effectuer une correcte sélection des motorisations, nous conseillons d'opérer comme suit:

13.1 Scelta dei motoriduttori

13.1 Gearmotor selection

13.1 Wahl des Getriebemotors

13.1 Sélection des motoréducteurs

a) Determinare il fattore di servizio f_s in funzione del tipo di carico (fattore K), del numero di inserzioni/ora Z_r e del numero di ore di funzionamento.

a) Determine service factor f_s according to type of load (factor K), number of starts per hour Z_r and hours of operation.

a) Den Betriebsfaktor f_s in Abhängigkeit von der Belastungsart (Faktor K), den Schaltungen/Stunde Z_r und den Betriebsstunden bestimmen.

a) Déterminer le facteur de service f_s en fonction du type de charge (facteur K), du nombre d'insertions/heure Z_r et du nombre d'heures de fonctionnement.

b) Dalla coppia M_{r2} , conoscendo n_2 e il rendimento dinamico η_D , ricavare la potenza in entrata

b) Providing torque M_{r2} , speed n_2 and dynamic efficiency η_D are known, you can obtain input power as follows:

b) Aus dem Drehmoment M_{r2} mit ilfe der bekannten Werte für n_2 und dem dynamischen Wirkungsgrad η_D die Antriebsleistung ableiten

b) A partir du couple M_{r2} , en connaissant n_2 et le rendement dynamique η_D , calculer la puissance en entrée

$$P_{r1} = \frac{M_{r2} \cdot n_2}{9550 \cdot \eta_D} \quad (\text{kW}) \quad (13)$$

$$P_{r1} = \frac{M_{r2} \cdot n_2}{9550 \cdot \eta_D} \quad (\text{kW}) \quad (13)$$

$$P_{r1} = \frac{M_{r2} \cdot n_2}{9550 \cdot \eta_D} \quad (\text{kW}) \quad (13)$$

$$P_{r1} = \frac{M_{r2} \cdot n_2}{9550 \cdot \eta_D} \quad (\text{kW}) \quad (13)$$

Il valore di η_D per le varie serie di riduttori è indicato nella tabella (A6):

Value η_D for the different types of gearbox is indicated in table (A6) below:

Der Wert für η_D für die verschiedenen Getriebeserien ist in Tabelle (A6) angegeben:

La valeur de η_D pour les différentes séries de réducteurs, est indiquée dans le tableau (A6):

(A6)

| Serie / Series Serie / Série | N° stadi / N° stages / Anz. Stufen / Nombre d'étages de réduction | | | |
|---------------------------------|--|------|------------------------------|------|
| | 1 | 2 | 3 | 4 |
| A | | 0.94 | 0.91 | 0.89 |
| C | | 0.95 | 0.93 | 0.91 |
| F | | 0.95 | 0.93 | 0.91 |
| S | 0.98 | | | |
| VB | $\eta_D = 0.85$ (n_2 max) | | $\eta_D = 0.74$ (n_2 min) | |
| VF | Fare riferimento alle tabelle riportate nei capitoli relativi a tali riduttori / Refer to tables in the chapters concerning these gearboxes Ssiehe die Tabellen in den zu diesen Getrieben gehörenden Kapiteln / Se référer aux tableaux présentés dans les chapitres relatifs à ces réducteurs | | | |

c) Ricerare fra le tabelle dei dati tecnici motoriduttori quella corrispondente ad una potenza

c) Consult the gearmotor selection charts and find the table corresponding to power

c) Unter den Tabellen mit den Technischen Daten der Getriebemotoren die Tabelle auswählen, die folgender Leistung entspricht:

c) Rechercher parmi les tableaux des caractéristiques techniques des motoréducteurs celui correspondant à une puissance

$$P_n \geq P_{r1} \quad (14)$$

$$P_n \geq P_{r1} \quad (14)$$

$$P_n \geq P_{r1} \quad (14)$$

$$P_n \geq P_{r1} \quad (14)$$

Se non diversamente indicato, la potenza P_n dei motori riportata a catalogo si riferisce al servizio continuo S1.

Unless otherwise specified, power P_n of motors indicated in the catalogue refers to continuous duty S1.

Wenn nicht anders angegeben, bezieht sich die im Katalog angegebene Leistung P_n der Motoren auf Dauerbetrieb S1. Bei Motoren, die unter anderen Bedingungen als S1 eingesetzt werden, muß die vorgesehene Betriebsart unter Bezug auf die CEI-Normen 2-3/IEC 34-1 bestimmt werden. Insbesondere kann man für die Betriebsarten S2 bis S8 (und für Motorbaugrößen gleich oder niedriger als 132) eine Überdimensionierung der Leistung relativ zu der für den Dauerbetrieb vorgesehenen Leistung erhalten; die zu erfüllende Bedingung ist dann:

Sauf indication contraire la puissance P_n des moteurs indiquée dans le catalogue se réfère à un service continu S1. Pour les moteurs utilisés dans des conditions différentes du service S1, il sera nécessaire d'identifier le type de service prévu en se référant aux normes CEI 2-3/IEC 34-1.

Per i motori utilizzati in condizioni diverse da S1, sarà necessario identificare il tipo servizio previsto con riferimento alle Norme CEI 2-3/IEC 34-1.

For motors used in conditions other than S1, the type of duty required by reference to CEI 2-3/IEC 34-1 Standards must be mentioned.

In particolare, per i servizi da S2 a S8 e per le grandezze motore uguali o inferiori a 132, è possibile ottenere una maggiorazione della potenza rispetto a quella prevista per il servizio continuo, pertanto la condizione da soddisfare sarà:

For duties from S2 to S8 in particular and for motor frame 132 or smaller, extra power can be obtained with respect to continuous duty power, consequently the following condition must be satisfied:

En particulier, pour les services de type S2 à S8 ou pour les tailles de moteurs égales ou supérieures à 132 il est possible d'obtenir une majoration de la puissance par rapport à celle prévue pour le service continu. Par conséquent, la condition à satisfaire sera:

$$P_n \geq \frac{P_{r1}}{f_m} \quad (15)$$

$$P_n \geq \frac{P_{r1}}{f_m} \quad (15)$$

$$P_n \geq \frac{P_{r1}}{f_m} \quad (15)$$

$$P_n \geq \frac{P_{r1}}{f_m} \quad (15)$$

Il fattore di maggiorazione f_m è ricavabile dalla tabella (A7).

The increased power factor f_m can be obtained from table (A7).

Der Überdimensionierungsfaktor f_m kann der Tabelle (A7) entnommen werden.

Le facteur de majoration f_m peut être obtenu en consultant le tableau (A7).

(A7)

| | SERVIZIO / DUTY / BETRIEB / SERVICE | | | | | | |

* La durata del ciclo dovrà comunque essere uguale o inferiore a 10 minuti; se superiore interpellare il nostro servizio tecnico. Rapporto di intermittenza

* Cycle duration, in any event, must be 10 minutes or less. If it is longer, please contact our technical service department. Intermittence ratio

* Die Zyklusdauer muß in jedem Fall kleiner oder gleich 10 min sein; wenn sie darüber liegt, unseren Technischen Kundendienst zu Rate ziehen. Relative Einschaltdauer

* La durée du cycle devra être égale ou inférieure à 10 minutes. Si supérieure, contacter notre service technique. Rapport d'intermittence

$$I = \frac{t_f}{t_f + t_r} \cdot 100 \quad (16)$$

$$I = \frac{t_f}{t_f + t_r} \cdot 100 \quad (16)$$

$$I = \frac{t_f}{t_f + t_r} \cdot 100 \quad (16)$$

$$I = \frac{t_f}{t_f + t_r} \cdot 100 \quad (16)$$

t_f = tempo di funzionamento a carico costante
 t_r = tempo di riposo

t_f = operating time at constant load
 t_r = rest time

t_f = Betriebszeit mit konstanter Belastung
 t_r = Aussetzzeit

t_f = temps de fonctionnement à charge constante
 t_r = temps de repos

Scegliere poi, in base alla velocità di uscita n_2 , il motoriduttore con un fattore di sicurezza S calcolato maggiore o uguale al fattore di servizio f_s .
Le tabelle dei dati tecnici dei motoriduttori si riferiscono a velocità di motori a 2, 4, 6, 2/4, 2/6, 2/8, 2/12 poli (50Hz).
Se si prevede l'applicazione di motori con velocità diverse da quelle indicate, la scelta dovrà essere effettuata seguendo la procedura di scelta dei riduttori.
Per particolari applicazioni, quali sollevamenti e traslazioni, contattare il ns. servizio tecnico.

Next, according to output speed n_2 , select a gearmotor having a calculated safety factor S higher than or equal to service factor f_s .
The gearmotor selection charts refer to 2, 4, 6, 2/4, 2/6, 2/8, and 2/12 pole motors (50Hz).
If motors with different speed shall be used, refer to the selection procedure for gearboxes and choose the most suitable gearmotor.
For special applications such as hoisting and travelling motion, contact our technical service department.

Dann auf Grundlage der Abtriebsdrehzahl n_2 den Getriebemotor mit einem Sicherheitsfaktor S wählen, der größer oder gleich dem Betriebsfaktor f_s ist.
Die Tabellen mit den Technischen Daten der Getriebemotoren beziehen sich auf die Drehzahlen von Motoren mit 2, 4, 6, 2/4, 2/6, 2/8 und 2/12 Polen (50Hz).
Wenn die Verwendung von Motoren mit anderen als den angegebenen Drehzahlen vorgesehen ist, muß die Wahl analog der Wahl des Getriebes ausgeführt werden.
Für besondere Anwendungen, wie Hub- und Fahrwerke, unseren Technischen Kundendienst zu Rate ziehen.

Choisir ensuite, suivant la vitesse en sortie n_2 , le motoréducteur avec un facteur de sécurité calculé S supérieur ou égal au facteur de service f_s .
Les tableaux des caractéristiques techniques des motoréducteurs se réfèrent aux vitesses de moteurs à 2, 4, 6, 2/4, 2/6, 2/8, 2/12 pôles (50 Hz).
Si l'on prévoit l'application de moteurs avec des vitesses différentes de celles indiquées, la sélection devra être effectuée en suivant la procédure de sélection des réducteurs.
Pour les applications particulières telles que levages et translations, contacter notre service technique.

13.2 Scelta dei riduttori e deiriduttori predisposti per motori IEC

13.2 Gearbox and gearbox with IEC adaptor selection

13.2 Wahl des Getriebes und Getriebe für IEC-motoren

13.2 Sélection des réducteurs et des réducteurs CEI

- a) Determinare il fattore di servizio f_s .
b) Conoscendo la coppia M_{r2} di uscita richiesta dalla applicazione, si procede alla definizione della coppia di calcolo

- a) Determine service factor f_s .
b) Assuming the required output torque for the application M_{r2} is known, the calculation torque can be then defined

- a) Den Betriebsfaktor f_s bestimmen.
b) Anhand des bekannten von der Anwendung geforderten Abtriebsdrehmoments M_{r2} das Soll-Drehmoment bestimmen

- a) Déterminer le facteur de service f_s .
b) En connaissant le couple M_{r2} de sortie requis par l'application, l'on procède à la définition du couple de calcul.

$$M_{c2} = M_{r2} \cdot f_s \quad (17)$$

$$M_{c2} = M_{r2} \cdot f_s \quad (17)$$

$$M_{c2} = M_{r2} \cdot f_s \quad (17)$$

$$M_{c2} = M_{r2} \cdot f_s \quad (17)$$

- c) In base alla velocità in uscita n_2 richiesta e a quella in entrata n_1 disponibile, si calcola il rapporto di riduzione

- c) The reduction ratio is calculated according to requested output speed n_2 and available input speed n_1

- c) Auf Grundlage der verlangten Abtriebsdrehzahl n_2 und der verfügbaren Antriebsdrehzahl n_1 die Übersetzungs berechnen:

- c) Suivant la vitesse en sortie n_2 requise et celle en entrée n_1 disponible, l'on calcule le rapport de réduction:

$$i = \frac{n_1}{n_2} \quad (18)$$

$$i = \frac{n_1}{n_2} \quad (18)$$

$$i = \frac{n_1}{n_2} \quad (18)$$

$$i = \frac{n_1}{n_2} \quad (18)$$

Disponendo dei dati M_{c2} e i , si ricercherà nelle tabelle corrispondenti alla velocità n_1 il riduttore che, in funzione del rapporto i più prossimo a quello calcolato, proponga una coppia nominale

Having obtained M_{c2} and i data, consult gearbox selection charts referring to speed n_1 and find the gearbox which, as a function of the i ratio closest to the calculated value, provides rated torque of

Anhand der Werte für M_{c2} und i in den Tabellen für die Drehzahl n_1 das Getriebe auswählen, das in Abhängigkeit von einer Übersetzung i , die dem Sollwert möglichst nahe ist, folgendes Nenn-Drehmoment erlaubt:

En disposant des données M_{c2} et i , l'on recherchera dans les tableaux correspondant à la vitesse n_1 le réducteur qui, en fonction du rapport i le plus proche de celui calculé, propose un couple nominal

$$M_{n2} \geq M_L \quad (19)$$

$$M_{n2} \geq M_L \quad (19)$$

$$M_{n2} \geq M_L \quad (19)$$

$$M_{n2} \geq M_L \quad (19)$$

Se al riduttore scelto dovrà essere applicato un motore elettrico forma B5 verificarne l'applicabilità consultando la tabella delle predisposizioni possibili riportata nella sezione dedicata ai riduttori in esame.

If the selected gearbox has to be fitted to an electric motor IEC shape B5, check the feasibility by consulting the tables containing the available IEC motor adaptors in the section dealing with the gear units under consideration.

Wenn das Getriebe mit einem Elektromotor IEC Form B5 verbunden werden soll, die Verträglichkeit anhand der Tabelle (siehe den Teil des Katalogs über die betreffenden Getriebe) der möglichen Anbaumöglichkeiten sicherstellen.

Au cas où il serait nécessaire d'appliquer un moteur électrique normalisé CEI forme B5 au réducteur choisi, en vérifier la possible adaptation en consultant le tableau des prédispositions possibles présenté dans la section dédiée aux réducteurs concernés.

14.0 VERIFICHE

14.0 VERIFICATION

14.0 PRÜFUNGEN

14.0 VERIFICATIONS

Effettuata la corretta selezione delle motorizzazioni, si consiglia di procedere alle seguenti verifiche:

After correctly selecting the drive units, you are recommended to check the following:

Nach Wahl des Getriebemotors folgende Prüfungen ausführen:

Après avoir effectué une sélection correcte des motorisations, nous conseillons de proceder aux vérifications suivantes:

- a) Potenza termica
Assicurarsi che la potenza termica del riduttore, indicata nelle tabelle riportate nei capitoli relativi alla serie di riduttori in esame, abbia un valore uguale o maggiore alla potenza richiesta dall'applicazione secondo la relazione (4) a pag. 6, in caso contrario selezionare un riduttore di grandezza superiore oppure provvedere ad applicare un sistema di raffreddamento forzato.

- a) Thermal power
Make sure that the thermal power of the gearbox (shown in the tables in the chapters dealing with the gear unit series captioned) is of equal or higher value with respect to the power required by the application according to equation (4) on page 6. If this condition is not respected, select a larger gearbox or apply a forced cooling system.

- a) Thermische Grenzleistung
Sicherstellen, daß die Wärme-grenzleistung des Getriebes, die in den Tabellen in den Kapiteln über die betreffenden Getriebeserien angegeben ist, größer oder gleich der verlangten Leistung ist, die von der Anwendung nach Gleichung (4) auf S. 6 verlangt wird. Andernfalls ein größer dimensioniertes Getriebe wählen bzw. ein Zwangskühlsystem vorsehen.

- a) Puissance thermique
S'assurer que la puissance thermique du réducteur, indiquée dans les tableaux repris dans les chapitres relatifs à la série de réducteurs concernée, ait une valeur supérieure ou égale à la puissance requise par l'application selon l'équation (4) page 6. Dans le cas contraire, sélectionner un réducteur de taille supérieure ou bien prévoir un système de refroidissement forcé.

b) Coppia massima

Generalmente la coppia massima (intesa come punta di carico istantaneo) applicabile al riduttore non deve superare il 200% della coppia nominale M_{n2} ; verificare pertanto che tale limite non venga superato adottando, se necessario, opportuni dispositivi per la limitazione della coppia.

Per i motori trifase a doppia polarità è necessario rivolgere particolare attenzione alla coppia di commutazione istantanea che viene generata durante la commutazione dall'alta velocità alla bassa in quanto può essere decisamente più elevata della coppia massima stessa.

Un metodo semplice ed economico per ridurre tale coppia è quello di alimentare solo due fasi del motore durante la commutazione (il tempo di alimentazione a due fasi può essere regolato mediante un relè a tempo):

$M_{g2} = 0.5 M_{g3}$
 M_{g2} = Coppia di commutazione alimentando 2 fasi
 M_{g3} = Coppia di commutazione alimentando 3 fasi

Suggeriamo comunque di contattare il ns. servizio tecnico.

b) Maximum torque

The maximum torque (intended as instantaneous peak load) applicable to the gearbox must not, in general, exceed 200% of rated torque M_{n2} . Therefore, check that this limit is not exceeded, using suitable torque limiting devices, if necessary.

For three-phase double polarity motors, it is important to pay attention to the instantaneous switching torque which is generated when switching from high to low speed, because it could be significantly higher than maximum torque.

A simple, economical way to reduce this type of torque is to power only two phases of the motor during switch-over (power-up time on two phases can be controlled with a time-relay):

$M_{g2} = 0.5 M_{g3}$
 M_{g2} = Switching torque with two-phase power-up
 M_{g3} = Switching torque with three-phase power-up

We advise you, in any event, to contact our technical service.

b) Max. Drehmoment

Im allgemeinen darf das max. Drehmoment (verstanden als momentane Lastspitze), das auf das Getriebe aufgebracht werden kann, 200 % des Nenndrehmoments M_{n2} nicht überschreiten. Sicherstellen, daß dieser Grenzwert nicht überschritten wird, und nötigenfalls die entsprechenden Vorrichtungen zur Begrenzung des Drehmoments vorsehen. Bei polumschaltbaren Drehstrommotoren muss dem Umschaltmoment, das beim Umschalten von der hohen auf die niedrige Drehzahl erzeugt wird, besondere Aufmerksamkeit geschenkt werden, da es entschieden größer sein kann als das Nenn-Drehmoment. Eine einfache und kostengünstige Methode zum Senken dieses Drehmoments besteht darin, daß nur zwei Phasen des Motors während des Umschaltens gespeist werden (die Dauer der Speisung von nur 2 Phasen kann durch ein Zeitrelais gesteuert werden):

$M_{g2} = 0.5 M_{g3}$
 M_{g2} = Umschaltmoment bei Speisung von 2 Phasen;
 M_{g3} = Umschaltmoment bei Speisung von 3 Phasen.

Wir empfehlen jedoch in jedem Fall, unseren Technischen Kundendienst zu Rate zu ziehen.

b) Couple maximum

Généralement, le couple maximum (à considérer comme une pointe de charge instantanée) applicable au réducteur ne doit pas dépasser les 200% du couple nominal M_{n2} . Vérifier par conséquent que cette limite ne soit pas dépassée en adoptant, si nécessaire, des dispositifs adaptés pour limiter le couple.

Pour les moteurs triphasés à double polarité, il est nécessaire de prêter une attention particulière au couple de commutation instantané qui est généré lors du passage de la grande à la petite vitesse étant donné qu'il peut être considérablement plus élevé que le couple maximum lui-même.

Une méthode simple et économique pour réduire ce couple consiste à alimenter seulement deux phases du moteur pendant la commutation (la durée d'alimentation sur deux phases peut être réglée au moyen d'un relais temporisateur):

$M_{g2} = 0.5 M_{g3}$
 M_{g2} = couple de commutation en alimentant deux phases
 M_{g3} = couple de commutation en alimentant trois phases

Nous suggérons cependant de contacter notre service technique.

c) Carichi radiali

Verificare che i carichi radiali agenti sugli alberi di entrata e/o uscita rientrino nei valori di catalogo ammessi. Se superiori, aumentare la grandezza del riduttore oppure modificare la supportazione del carico.

Ricordiamo che tutti i valori indicati nel catalogo si riferiscono a carichi agenti sulla mezziera della sporgenza dell'albero in esame per cui, in fase di verifica, è indispensabile tenere conto di questa condizione provvedendo, se necessario, a determinare con le apposite formule il carico ammissibile alla distanza $x_{1,2}$ desiderata.

A tale proposito si rimanda ai paragrafi relativi ai carichi radiali.

c) Radial loads

Check that radial loads exerted on input and/or output shafts are within permitted catalogue values. If they are higher, use a larger gearbox or modify system bearing arrangement.

Remember that all values mentioned in the catalogue refer to loads exerted on the extension mid-point of the shaft under consideration. Therefore, when checking, this condition must be borne in mind and, if necessary, determine permitted load at the required $x_{1,2}$ distance by means of appropriate equations.

In this connection, consult the headings on radial loads.

c) Radialkräfte

Sicherstellen, daß die auf die Antriebswellen und/oder Abtriebswellen wirkenden Radialkräfte innerhalb der zulässigen Katalogwerte liegen. Wenn sie höher sind, das Getriebe größer dimensionieren bzw. die Abstützung der Last verändern. Wir erinnern daran, daß alle im Katalog angegebenen Werte sich auf Kräfte beziehen, die auf die Mitte des Wellenendes wirken. Diese Tatsache muß bei der Prüfung unbedingt berücksichtigt werden und nötigenfalls muß mit Hilfe der geeigneten Formeln die zulässige Kraft beim gewünschten Abstand $x_{1,2}$ bestimmt werden. Siehe hierzu die Erläuterungen zu den Radialkräften in diesem Katalog.

c) Charges radiales

Vérifier que les charges radiales agissant sur les arbres d'entrée et/ou de sortie se situent dans les valeurs de catalogue admises. Si elles sont supérieures, choisir la taille du réducteur supérieure ou modifier la reprise de charge. Rappelons que toutes les valeurs indiquées dans le catalogue se réfèrent à des charges agissant au milieu de la longueur disponible de l'arbre contrôlé. Par conséquent, en phase de vérification, il est indispensable de prendre en considération cette condition en déterminant, si nécessaire, avec les formules appropriées, la charge admissible à la distance $x_{1,2}$ désirée. Se rapporter à ce propos aux paragraphes relatifs aux charges radiales.

d) Carichi assiali

Anche gli eventuali carichi assiali dovranno essere confrontati con i valori ammissibili riportati nel catalogo.

Se si è in presenza di carichi assiali molto elevati o combinati con carichi radiali, si consiglia di interpellare il ns. servizio tecnico.

d) Thrust loads

Thrust loads, if present, must also be compared to the permitted values indicated in the catalogue.

In the event of extremely high thrust loads, or a combination of thrust and radial loads, contact our technical service department.

d) Axialkräfte

Auch die eventuell vorhandenen Axialkräfte müssen mit den im Katalog angegebenen zulässigen Werten verglichen werden. Wenn sehr hohe Axialkräfte wirken oder Axialkräfte in Kombination mit Radialkräften, bitte unseren Technischen Kundendienst zu Rate ziehen.

d) Charges axiales

Les éventuelles charges axiales devront être comparées avec les valeurs admissibles indiquées dans le catalogue. Si l'on est en présence de charges axiales très élevées ou combinées avec des charges radiales, nous conseillons d'interpellier notre service technique.

e) Motori elettrici

Per servizi diversi da S1, con un numero rilevante di inserzioni/ora si dovrà tener conto di un fattore Z (determinabile con le indicazioni riportate nel capitolo dei motori) il quale definisce il numero max. di avviamenti specifico per l'applicazione in oggetto.

e) Electric motors

For duties other than S1 with considerable number of starts per hour, factor Z must be considered (it is ascertained by using the information in the motors chapter). Factor Z defines the maximum number of starts for the application under consideration.

e) Elektro-Motoren

Bei anderen Betriebsarten als S1 mit einem hohen Wert für die Schaltungen/Stunde muß der Faktor Z berücksichtigt werden (er kann mit Hilfe der Angaben im Kapitel Motoren bestimmt werden), der die max. zulässige Anzahl von Schalten für eine bestimmte Anwendung definiert.

e) Moteur électriques

Pour les services différents de S1, avec un nombre important d'insertions/heure, il faudra prendre en considération un facteur Z (déterminé à l'aide des informations reportées dans le chapitre des moteurs) qui définit le nombre maximum de démarrages spécifique pour l'application concernée.

15.0 INSTALLAZIONE

E' molto importante, per l'installazione del riduttore/variatore, attenersi alle seguenti norme:

- a) Assicurarsi che il fissaggio del riduttore/variatore, sia stabile onde evitare qualsiasi vibrazione. Installare (se si prevedono urti, sovraccarichi prolungati o possibili bloccaggi) giunti idraulici, frizioni, limitatori di coppia, ecc.
- b) Durante la verniciatura si dovranno proteggere i piani lavorati e il bordo esterno degli anelli di tenuta per evitare che la vernice ne essichi la gomma, pregiudicando la tenuta del paraolio stesso.
- c) Gli organi che vanno calettati sugli alberi di uscita del riduttore devono essere lavorati con tolleranza ISO H7 per evitare accoppiamenti troppo bloccati che, in fase di montaggio potrebbero danneggiare irreparabilmente il riduttore stesso. Inoltre, per il montaggio e lo smontaggio di tali organi si consiglia l'uso di adeguati tiranti ed estrattori utilizzando il foro filettato posto in testa alle estremità degli alberi.
- d) Le superfici di contatto dovranno essere pulite e trattate con adeguati protettivi prima del montaggio, onde evitare l'ossidazione e il conseguente bloccaggio delle parti.
- e) L'accoppiamento all'albero di uscita cavo del riduttore (tolleranza G7) viene normalmente eseguito con perni lavorati con tolleranza h6. Dove il tipo di applicazione lo richieda, si può prevedere un accoppiamento con una leggera interferenza (G7 - j6).
- f) Prima della messa in funzione della macchina, accertarsi che la posizione del livello del lubrificante sia conforme alla posizione di montaggio del riduttore e che la viscosità sia adeguata al tipo del carico (vedi tabella A3).

16.0 STOCCAGGIO

Il corretto stoccaggio dei prodotti ricevuti richiede l'esecuzione delle seguenti attività:

- a) Escludere aree all'aperto, zone esposte alle intemperie o con eccessiva umidità.
- b) Interporre sempre tra il pavimento ed i prodotti, pianali lignei o di altra natura, atti ad impedire il diretto contatto col suolo.

15.0 INSTALLATION

The following installation instructions for gearboxes/variators must be observed:

- a) Make sure that the gearbox/variator is correctly secured to avoid vibrations. If shocks, prolonged overloading, or the possibility of locking are expected, install hydraulic couplings, clutches, torque limiters, etc.b).
- b) During painting, the machined surfaces and the outside face of the oilseals must be protected to prevent paint drying out the rubber thus jeopardising oil-seal function.
- c) Parts assembled on the gearbox output shafts must be machined to ISO H7 tolerance to prevent interference fits that could damage the gearbox itself. Further, to mount or demount such parts, employ suitable pullers or extraction devices using the tapped hole located at the top of the shaft extensions.
- d) Contact surfaces must be cleaned and treated with suitable protective products before mounting to avoid oxidation and, as a result, seizure of parts.
- e) Coupling to the gearbox output hollow shaft (tolerance G7) is usually effected with shafts machined to h6 tolerance. If the type of application requires it, coupling with a slight interference (G7 - j6) is possible.
- f) Before starting up the machine, make sure that oil level conforms to the reduction unit mounting position, and that viscosity is suitable for the load involved (see table A3).

16.0 STORAGE

Observe the following instructions to ensure correct storage of delivered products:

- a) Do not store outdoors, in areas exposed to weather or with excessive humidity.
- b) Always place boards in wood or other material between floor and products, to avoid direct contact with the floor.

15.0 INSTALLATION

Für die Installation des Getriebes/Verstellgetriebes ist es äußerst wichtig, daß folgende Normen beachtet werden:

- a) Sicherstellen, daß die Befestigung des Getriebes/Verstellgetriebes stabil ist, damit keine Schwingungen entstehen. Wenn es voraussichtlich zu Stößen, längerdauernden Überlasten oder zu Blockierungen kommen kann, sind entsprechende Schutzelemente wie hydraulische Kupplungen, Kupplungen, Rutschkupplungen usw. zu installieren.
- b) Beim Lackieren die bearbeiteten Flächen und die Dichtringe schützen, damit der Anstrichstoff nicht dem Kunststoff angreift und somit die Dichtigkeit der Ölabdichtungen in Frage gestellt wird.
- c) Die Organe, die mit einer Keilverbindung auf der Abtriebswelle des Getriebes befestigt werden, müssen mit einer Toleranz ISO H7 gearbeitet sein, um allzu fest blockierte Verbindungen zu vermeiden, die eventuell zu einer irreparablen Beschädigung des Getriebes während des Einbaus führen könnten. Außerdem sind beim Ein- und Ausbau dieser Organe geeignete Zugstangen und Abzieher zu verwenden, wobei die Gewindebohrung an den Köpfen der Wellen zu verwenden ist.
- d) Die Berührungsflächen müssen sauber sein und vor der Montage mit einem geeigneten Schutzmittel behandelt werden, um Oxidierung und die daraus folgende Blockierung der Teile zu verhindern.
- e) Die Verbindung mit der Abtriebshohlwelle des Getriebes (Toleranz G7) wird normalerweise mit Zapfen mit Toleranz h6 hergestellt. Wo die Anwendungsart dies verlangt, kann man die Verbindung mit einem leichten Übermaß ausführen (G7 - j6).
- f) Vor Inbetriebnahme der Maschine sicherstellen, daß die Anordnung der Füllstandschräube der Einbaulage angemessen ist, und die Viskosität des Schmiermittels der Belastungsart entspricht (siehe Tabelle A3).

16.0 LAGERUNG

Die korrekte Lagerung der Antriebe erfordert folgende Vorkehrungen:

- a) Die Produkte nicht im Freien lagern und nicht in Räumen, die der Witterung ausgesetzt sind, oder eine hohe Feuchtigkeit aufweisen.
- b) Die Produkte nie direkt auf dem Boden, sondern auf Unterlagen aus Holz oder einem anderen Material lagern.

15.0 INSTALLATION

Il est très important, pour l'installation du réducteur/variateur, de se conformer aux règles suivantes:

- a) S'assurer que la fixation du réducteur/variateur soit stable afin d'éviter toute vibration. Installer (en cas de chocs, de surcharges prolongées ou de blocages) des coupleurs hydrauliques, des embrayages, des limiteurs de couple etc...
- b) En phase de peinture, il faudra protéger les plans usinés et le bord extérieur des bagues d'étanchéité pour éviter que la peinture ne dessèche le caoutchouc, ce qui risque de nuire à l'efficacité du joint.
- c) Les organes qui sont calés sur les arbres de sortie du réducteur doivent être réalisés avec une tolérance ISO H7 pour éviter les accouplements trop serrés qui, en phase de montage, pourraient endommager irréremédiablement le réducteur. En outre, pour le montage et le démontage de ces organes, nous conseillons d'utiliser un outillage et des extracteurs appropriés en utilisant le trou taraudé situé en extrémité d'arbre.
- d) Les surfaces de contact devront être propres et traitées avec des produits de protections appropriés avant le montage afin d'éviter l'oxydation et par suite le blocage des pièces.
- e) L'accouplement à l'arbre de sortie creux du réducteur (tolérance G7) est habituellement réalisé avec des arbres exécutés à la tolérance h6. Lorsque le type d'application le demande, on peut prévoir un accouplement avec une légère interférence (G7 - j6).
- f) Avant la mise en marche de la machine, s'assurer que la position du niveau du lubrifiant soit conforme à la position de montage du réducteur et que la viscosité soit appropriée au type de charge (voir tableau A3).

16.0 STOCKAGE

Un correct stockage des produits reçus nécessite de respecter les règles suivantes:

- a) Exclure les zones à ciel ouvert, les zones exposées aux intempéries ou avec humidité excessive.
- b) Interposer dans tous les cas entre le plancher et les produits des planches de bois ou des supports d'autre nature empêchant le contact direct avec le sol.

- | | | | |
|---|--|---|--|
| <p>c) Per periodi di stoccaggio superiori ai 60 giorni, le superfici interessate agli accoppiamenti quali flange, alberi e giunti, devono essere protette con idoneo prodotto antiossidante (Mobilarma 248 od equivalente).</p> <p>d) Per periodi di stoccaggio previsti superiori ai 6 mesi, i prodotti devono essere oggetto delle seguenti attività: d1) I prodotti forniti con lubrificazione permanente dovranno avere le parti lavorate esterne e quelle di accoppiamento ricoperte di grasso atto ad evitare ossidazioni. d2) I prodotti forniti privi di lubrificante, oltre alle attività descritte al punto d1), dovranno essere posizionati con il tappo di sfiato nella posizione più alta e riempiti di olio. I riduttori, prima del loro utilizzo, dovranno essere riempiti con la corretta quantità e tipo di lubrificante previsto.</p> | <p>c) For storage periods of over 60 days, all machined surfaces such as flanges, shafts and couplings must be protected with a suitable anti-oxidation product (Mobilarma 248 or equivalent product).</p> <p>d) The following measures must be taken in respect of products for which the expected storage period exceeds 6 months: d1) For life lubricated products, the external machined parts must be greased to prevent oxidation. d2) In addition to the measures at point d1), products supplied without oil must be positioned with the breather plug high up, and be filled with oil. Before using the gearboxes, restore the correct quantity of recommended oil.</p> | <p>c) Bei Lagerzeiten von mehr als 60 Tagen die Oberflächen für die Verbindung, wie Flansche, Wellen oder Kupplungen mit einem geeigneten Oxidationsschutzmittel behandeln (Mobilarma 248 oder ein äquivalentes Mittel).</p> <p>d) Bei Lagerzeiten von mehr als 6 Monaten müssen folgende Vorkehrungen getroffen werden: d1) Bei den Produkten mit Dauerschmierung müssen die maschinell bearbeiteten Außenseiten und die Verbindungsflächen mit Fett vor Oxidation geschützt werden. d2) Die Produkte ohne Schmiermittel müssen wie unter Punkt d1) behandelt werden und außerdem mit nach oben gerichteter Entlüftungsschraube gelagert und mit Öl gefüllt werden. Die Getriebe müssen vor ihrer Verwendung mit der angegebenen Menge des vorgesehenen Schmiermittels gefüllt werden.</p> | <p>c) Pour les périodes de stockage supérieures à 60 jours, les surfaces concernées par les liaisons telles que les brides, les arbres et les accouplements doivent être protégés avec un produit antioxydant spécial (Mobilarma 248 ou équivalent).</p> <p>d) Pour les périodes de stockage prévues supérieures à 6 mois, les produits doivent être objet des contrôles suivants: d1) les produits fournis avec lubrification permanente devront avoir les parties externes usinées ainsi que celles de liaison recouvertes de graisse pour éviter les oxydations. d2) les produits fournis sans lubrifiant, outre les opérations décrites au point d1), devront être positionnés avec le bouchon d'évent dans la position la plus haute et remplis d'huile. Les réducteurs, avant d'être utilisés, devront être remplis avec la juste quantité et type de lubrifiant prévu.A</p> |
|---|--|---|--|

17.0 CONDIZIONI DI FORNITURA

I riduttori e i variatori vengono forniti come segue:

- a) già predisposti per essere installati nella posizione di montaggio come definito in fase di ordine;
- b) collaudati secondo specifiche interne;
- c) appositamente imballati;
- d) le superfici di accoppiamento non sono verniciate;
- e) provvisti di dadi e bulloni per montaggio motori per la versione IEC;
- f) tutti i riduttori/variatori sono forniti con protezioni in plastica sugli alberi;
- g) già provvisti di lubrificante(dove previsto);
- h) già verniciati (dove previsto);
- i) già provvisti di galfare di sollevamento (dove previsto).

17.0 SUPPLY CONDITIONS

Our units are supplied as follows:

- a) ready for installation in the mounting position specified when ordering;
- b) tested to our own specifications;
- c) appropriately packed;
- d) mating machined surfaces are not painted;
- e) with nuts and bolts for mounting motors for the IEC version;
- f) all gearboxes/variators are supplied with plastic protection on shafts;
- g) included lubricant (if supplied)
- h) painted (if supplied);
- i) fitted with lifting hook (if supplied).

17.0 LIEFERBEDINGUNGEN

Die Getriebe und Verstellgetriebe werden in folgendem Zustand geliefert:

- a) schon bereit für die Montage in der bei Bestellung festgelegten Einbaulage;
- b) nach werksinternen Spezifikationen geprüft;
- c) ordnungsgemäss verpackt;
- d) die Verbindungsflächen sind nicht lackiert;
- e) ausgestattet mit Schrauben und Muttern für die Montage der Motoren (Version mit Adapter für IEC-Motoren);
- f) alle Getriebe/Verstellgetriebe werden mit Kunststoffschutz auf den Wellen geliefert;
- g) Schmiermittel (falls vorgesehen) bereits vorhanden;
- h) bereits lackiert (falls vorgesehen);
- i) mit Transporterring zum Anheben (falls vorgesehen).

17.0 CONDITIONS DE LIVRAISON

Les réducteurs et les variateurs sont livrés comme suit:

- a) déjà prédisposés pour être installés dans la position de montage comme défini en phase de commande;
- b) testés selon les spécifications internes;
- c) emballés comme il se doit;
- d) les surfaces de liaison ne sont pas peintes;
- e) équipés d'écrous et de boulons pour le montage des moteurs normalisés pour la version CEI;
- f) tous les réducteurs/variateurs sont fournis avec des embouts de protections en plastique sur les arbres;
- g) déjà dotés de lubrifiant (quand cela est prévu);
- h) déjà peints (quand cela est prévu);
- i) déjà dotés d'un crochet de levage (quand cela est prévu).

18.0 SPECIFICHE DELLA VERNICE

Le specifiche della vernice applicata sui riduttori e variatori (dove previsto) potranno essere richieste alle filiali o ai distributori che hanno fornito i gruppi.

18.0 PAINT SPECIFICATIONS

Paint specifications for paint applied to gearboxes and variators (where appropriate) may be requested from the branches or dealers that supplied the units.

18.0 ANGABEN ZU DEN ANSTRICHSTOFFE

Die Spezifikationen des Lackes, der auf den Getriebe und Verstellgetriebe (wo erforderlich) verwendet wurde, können bei den Filialen oder Verkaufsstellen, die die Gruppen geliefert haben, angefordert werden.

18.0 SPECIFICATIONS DE LA PEINTURE

Les spécification de la peinture appliquée sur les réducteurs et les variateurs pourront, le cas échéant, être demandées aux filiales ou aux distributeurs ayant fourni les groupes.

1.0 CARATTERISTICHE COSTRUTTIVE

Le caratteristiche costruttive salienti sono:

- modularità
- compattezza
- montaggi universali
- rendimenti elevati
- basso livello di rumorosità
- ingranaggi in acciaio legato cementati e temprati
- casse in alluminio non verniciate nelle grandezze 10, 20, 30, casse in ghisa ad alta resistenza verniciate, nelle altre grandezze
- alberi in entrata e uscita in acciaio ad alta resistenza

La modularità dei riduttori serie A viene illustrata nella tabella (B1).

(B1)

1.0 DESIGN CHARACTERISTICS

The main design characteristics are:

- modularity
- compact design
- universal mounting
- high efficiency
- low noise level
- gears in hardened and case-hardened steel
- aluminium housing for sizes 10, 20, 30, not painted, high strength painted cast-iron housings for larger sizes.
- input and output shafts in high strength steel

The modularity of series A reduction units is shown in table (B1).

1.0 KONSTRUKTIVE EIGENSCHAFTEN

Die wichtigsten konstruktiven Eigenschaften sind:

- Baueinheitensystem
- Kompaktheit
- universelle Montage
- hohe Wirkungsgrade
- niedriger Geräuschpegel
- einsatzgehärtete und gehärtete Zahnräder aus legiertem Stahl
- Nicht lackierten Aluminiumgehäuse bei den Größen 10, 20 und 30; hochwiderstandsfähige und lackierte Gußgehäuse bei den anderen Größen.
- Antriebs- und Abtriebswellen aus hochwiderstandsfähigem Stahl.

Das Baueinheitensystem der Getriebe Serie A wird in Abbildung (B1) illustriert.

1.0 CARACTERISTIQUES DE CONSTRUCTION

Les principales caractéristiques de construction sont:

- modularité
- compacité
- montages universels
- rendements élevés
- faible niveau de bruit
- engrenages en acier allié cimentés et trempés
- carters en aluminium non peints dans les tailles 10, 20, 30, carters en fonte à haute résistance peints dans les autres tailles
- arbres d'entrée et de sortie en acier à haute résistance

La modularité des réducteurs série A est illustrée sur le tableau (B1).

- Legenda:**

2.0 FORME COSTRUTTIVE

2.0 VERSIONS

2.0 BAUFORMEN

2.0 FORMES DE CONSTRUCTION

Di seguito sono indicate le forme costruttive disponibili per i riduttori, motoriduttori serie A.

Available version for A series gearbox and gearmotors are illustrated below.

Im folgenden werden die für die Getriebe und Getriebemotoren der Serie A lieferbaren Bauformen angegeben.

Ci-dessous sont indiquées les formes de construction disponibles pour les réducteurs et les motoréducteurs série A.

NR
Standard

Con albero lento a singola sporgenza
With single extension output shaft
Mit Einzelwellenende-Abtriebswelle
Avec arbre lent sortant d'un seul côté

UR

ND
Standard

Con albero lento bisporgente
With double extension output shaft
Mit Zweiwellenenden-Abtriebswelle
Avec arbre lent sortant de deux côtés

UD

NH
Standard

Con albero lento cavo con cava per linguetta
With hollow output shaft and keyway
Mit Federnut-Abtriebshohlwelle
Avec arbre lent creux claveté

UH

US
Standard

Con albero lento cavo e calettatore
With hollow output shaft and shrink disc
Mit Abtriebshohlwelle und Schrumpfscheibe
Avec arbre lent creux et frette de serrage

2.1 Forme costruttive con flangia riportata

2.1 Basic versions with bolted flange

2.1 Bauformen mit aufgesetztem Flansch

2.1 Formes de construction avec bride rapportée

Gli schemi riportati evidenziano le flange applicabili alle forme costruttive base e la loro collocazione (1,2).

The sketches show the applicable flanges to the basic versions and their positions (1,2).

Die angegebenen Bilder zeigen die den Grundbauformen anbaubaren Flansche und ihre Positionierung (1,2).

Les schémas reportés définissent les brides applicables aux formes de construction standard et leur position (1,2).

3.3 Opzioni riduttori

AL, AR
Antiretro. Nel par. 9.0 sono riportati i sensi di rotazione da indicare e i tipi di riduttori nei quali è applicabile il dispositivo antiretro.

SO
I riduttori A10, A20, A30, solitamente forniti con lubrificante dalla BONFIGLIOLI RIDUTTORI, sono forniti privi di lubrificante.

LO
I riduttori A41, A50, A60, A70, A80, A90, solitamente sprovvisti di lubrificante, sono richiesti con olio sintetico del tipo correntemente utilizzato dalla BONFIGLIOLI RIDUTTORI e riempiti in accordo alla posizione di montaggio richiesta.

DV
2 Anelli di tenuta sull'albero veloce. (Disponibile solo sui motoriduttori compatti).

VV
Anello di tenuta in Viton sull'albero veloce.

PV
Tutti gli anelli di tenuta in Viton.

3.4 Note motori

1)
- TENSIONE - FREQUENZA
Da indicare sempre quando sono richieste tensioni/frequenze speciali.
Tensioni standard come descritto al par. 6.0.

- GRADO DI PROTEZIONE
Protezione IP56 (IP55 per autofrenanti) a richiesta.

- CLASSE DI ISOLAMENTO
Classi di isolamento H a richiesta.

2) TIPO DI FRENO
Disponibile, a richiesta, freno FA (freno c.a.).
Se non specificato il freno è omesso.

3) COPPIA FRENANTE
Valori standard come riportato nelle tabelle dati motore.
Altre coppie a richiesta (vedi tab. C24 - tipo FD, per tipo FA vedi documentazione relativa).

4) TIPO DI ALIMENTATORE
Da indicare solo per freni FD.
A richiesta, per i freni FD02, FD03, FD53, FD04, FD14, FD05, FD15, può essere fornito il raddrizzatore SB.

5) ALIMENTAZIONE FRENO

Freni tipo FD
Tensione alimentazione come descritto al par. 7.1

Per alimentazione freno separata indicare:

a) il valore di tensione richiesto seguito da **SA** (p.e. 290SA)
B) nel caso di alimentazione diretta del freno in c.c. indicare il valore di tensione seguito da **SD** (p.e. 24SD); in questo caso il raddrizzatore è escluso dalla fornitura

Freni tipo FA
Vedi documentazione motori specifica.
Per alimentazione freno separata indicare il valore di tensione seguito da **SA** (p.e. 290SA).

Se non specificati espressamente, i dati previsti nei campi sopra indicati saranno assunti corrispondenti alla versione standard a catalogo.

3.3 Gearbox options

AL, AR
Anti-run back device. Directions of rotation to be indicated and types of gearboxes in which the anti-run back device can be installed are listed in chapter 9.0.

SO
Gearboxes A10, A20, A30, supplied without oil.

LO
Gearboxes A41, A50, A60, A70, A80, A90, usually supplied without oil, to be supplied with synthetic oil currently used by BONFIGLIOLI RIDUTTORI and filled according to requested mounting position.

DV
2 oil seals on input shaft. (Available only for compact gearmotors).

VV
Viton oil seal on input shaft.

PV
All oil seals in Viton material.

3.4 Notes on motors

1)
- VOLTAGE - FREQUENCY
To be always stated when special voltages are required.
Standard voltages as par. 6.0

- PROTECTION CLASS
Upon request IP56 protection class (IP55 for brake motors).

- INSULATION CLASS
Isolation classes H upon request.

2) BRAKE TYPE
FA brake (a.c. brake) also available on request.
Brake omitted if brake type not specified.

3) BRAKING TORQUE
Standard values as in the motor data table.
Upon request are available different torques (for FD type see table C24, for FA type see relevant documentation).

4) RECTIFIER TYPE
To be indicated only for brakes type FD.
Upon request for brakes FD02, FD03, FD53, FD04, FD14, FD05, FD15, the rectifier type SB can be supplied.

5) BRAKE SUPPLY

Brakes type FD.
Power supply as described at paragraph 7.1

For separate power supply, it must be stated:

a) the voltage value required followed by **SA** (i.e. 290SA)
b) in case of direct power supply of d.c. brake, state the voltage value followed by **SD** (i.e. 24SD); in this case the rectifier will be not supplied.

Brakes type FA.
See the relevant motor documentation.
For separate power supply, state the voltage value followed by **SA** (i.e. 290SA).

If not specified, the data as above will be understood as the ones corresponding to the standard catalogue version.

3.3 Getriebe Optionen

AL, AR
Im Abschnitt 9.0 werden die anzugebenden Drehrichtungen und die Getriebearten angegeben, mit denen die Rücklaufsperrung verwendet werden kann.

SO
Bei Lieferung ohne Schmierstoff (nur bei A10, A20, A30).

LO
Für Getriebe A41, A50, A60, A70, A80, A90, die gewöhnlich ohne Schmiermittel geliefert werden, in Übereinstimmung mit der Einbaulage gefüllt mit dem normalerweise von BONFIGLIOLI RIDUTTORI verwendeten synthetischen Schmierstoff.

DV
2 Wellendichtringe auf der eintreibenden Welle. (Nur für Kompaktgetriebe-motoren).

VV
Wellendichtringe aus Viton auf der eintreibenden Welle.

PV
Alle Wellendichtringe aus Viton.

3.4 Anmerkungen zu den Motoren

1)
- SPANNUNG - FREQUENZ
Ist immer anzugeben.
Standardspannungen wie im Abschnitt 6.0.

- SCHUTZART
Auf Anfrage IP56 (IP55 für Bremsmotoren) lieferbar.

- ISOLIERSTOFFKLASSE
Isolierstoffklasse H auf Anfrage lieferbar.

2) BREMSENTYP
Lieferbar auf Anfrage auch Bremse FA (Drehstrombremse).
Wenn nicht anders angegeben, fehlt die Bremse.

3) BREMSMOMENT
Standardwerte können aus den Datenblättern entnommen werden.
Andere Momente sind auf Anfrage verfügbar (für Typ FD, siehe Tabelle C24, für Typ FA, siehe die entsprechende Unterlagen).

4) GLEICHRICHTERTYP
Ist nur für Bremse Typ FD anzugeben.
Auf Anfrage für Bremsen Typ FD02, FD03, FD53, FD04, FD14, FD05, FD15, kann das Gleichrichtertyp SB geliefert werden.

5) BREMSSPANNUNGS-
VESORGUNG

Bremstyp FD.
Spannungsversorgung ist im Abschnitt 7.1 angegeben

Für getrennte Spannungsversorgung, sind anzugeben:

a) den angefragten Spannungswert, gefolgt von **SA** (z.B. 290SA)
b) im Fall von direkten Spannungsversorgung von G.S.-Bremsen, muß man den Spannungswert gefolgt von **SD** angeben (z.B. 24SD); in diesem Fall erfolgt die Lieferung ohne Gleichrichter.

Bremstyp FA.
Siehe die entsprechenden Motorenunterlagen.
Für getrennte Spannungsversorgung, muß man den Spannungswert gefolgt von **SA** angeben (z.B. 290SA).

Wenn nicht angegeben, werden die obengenannten Daten als Standardausführung wie im Katalog verstanden.

3.3 Options réducteurs

AL, AR
Le paragraphe 9.0. indique le sens de rotation à signaler et les types de réducteur dans les quels on peut appliquer le dispositif anti-retour.

SO
Les réducteurs A10, A20, A30, habituellement fourni avec lubrifiant par la société BONFIGLIOLI RIDUTTORI, sont livrés sans lubrifiant.

LO
Les réducteurs A41, A50, A60, A70, A80, A90, habituellement dépourvus de lubrifiants, sont demandés avec huile synthétique du type couramment utilisé par BONFIGLIOLI RIDUTTORI et remplis conformément à la position de montage demandée.

DV
2 bagues d'étanchéité sur l'arbre rapide. (Disponible seulement sur les motoréducteurs compacts).

VV
Bague d'étanchéité en Viton sur l'arbre rapide.

PV
Toutes les bagues d'étanchéité en Viton.

3.4 Remarques moteurs

1)
- TENSION - FREQUENCE
A préciser dans tous les cas quand des tensions ou fréquences sont demandées.
Tensions standard comme indiqué au par. 6.0.

- DEGRE DE PROTECTION
Protection IP56 (IP55 pour moteurs freins) sur demande.

- CLASSE D'ISOLATION
Classes d'isolation H sur demande.

2) TYPE DE FREIN
Frein FA (frein c.a.) également disponible, sur demande,
Si non spécifié, le frein est omis.

3) COUPLE DE FREINAGE
Valeurs standard comme indiqué dans les tableaux des caractéristiques moteurs.
Couples différents sur demande (voir tableau C24 - type FD, pour type FA voir documentation spécifique).

4) TYPE D'ALIMENTATEUR
A préciser seulement pour type FD. Sur demande, pour les freins FD02, FD03, FD53, FD04, FD14, FD05, FD15, il est possible de fournir le redresseur SB.

5) ALIMENTATION DU FREIN

Freins type FD
Tension d'alimentation comme définie au paragraphe 7.1

Pour une alimentation séparée du frein, indiquer:

a) la valeur de tension requise suivie de **SA** (ex. 280SA)
B) dans le cas d'une alimentation directe du frein en courant continue indiquer la valeur de tension à la suite de **SD** (EX. 24 SD); dans ce cas le redresseur est exclu de la fourniture.

Frein type FA
Voir documentation moteur spécifique.
Pour une alimentation du frein séparée indiquer la valeur de tension à la suite de **SA** (ex. 290SA).

L'absence de précision, les caractéristiques prévues dans le domaine ci-dessus indiqué seront celles prévues du catalogue pour la version standard.

3.5 Opzioni motori

AA, AC, AD

Posizione angolare leva di sblocco freno rispetto alla posizione morsetti vista lato ventola.

Posizione standard = 90° orari.

AA = 0°, AC = 180°, AD = 90° antiorari.

AL, AR

Antiretro (solo per motori di tipo M). Per selezionare il senso di rotazione dell'albero lento desiderato riferirsi al paragrafo 9.0.

CF

Filtro capacitivo.

D3

No. 3 sonde bimetalliche.

E3

No. 3 termistori per motori a singola polarità e doppia polarità (in accordo alla classe di isolamento).

E6

No. 3 termistori di intervento in accordo alla classe di isolamento + No. 3 termistori di allarme in accordo alla classe inferiore a quella di isolamento. (es: F + B o H + F).

F1

Volano per avviamento progressivo.

H1

Riscaldatori anticondensa.

Alimentazione standard 230 V ± 10%.

M3

Morsetti a 9 morsetti.

PN

Potenza a 60 Hz corrispondente alla potenza normalizzata a 50 Hz.

PS

Doppia estremità d'albero (esclude opzione RC e U1).

PT

Motore standard 220/380-50 Hz alimentato a 220/380-60 Hz (con declassamento di coppia nominale).

RC

Tettuccio parapioggia (esclude opzione PS).

RV

Bilanciamento rotore in grado di vibrazione R.

TP

Tropicalizzazione.

U1

Servoventilazione (esclude opzione PS).

3.5 Motor options

AA, AC, AD

Angular position of the brake release lever with respect to the terminal box position looking from fan side.

Standard position = 90° clockwise.

AA = 0°, AC = 180°, AD = 90° counterclockwise.

AL, AR

Anti run back (only for motors type M).

To choose the suitable output shaft's direction of rotation refer to heading 9.0.

CF

Capacitive filter.

D3

No. 3 bimetallic thermostates.

E3

No. 3 thermistors for single polarity motors and double polarity motors (according to the isolation class).

E6

No.3 switching thermistors according to the isolation class + No. 3 alarm thermistors according to the class lower than the insulation class (f.e.: F+B or H+F).

F1

Flywheel for soft start.

H1

Anti-condensate heaters

Standard voltage 230V ± 10%.

M3

Terminal box: 9 terminals.

PN

60 Hz power corresponding to the normalized 50 Hz power.

PS

Double shaft extension (excluding RC and U1 options).

PT

Standard motor 220/380V - 50 Hz supplied at 220/380V - 60 Hz (with nominal torque derating).

RC

Rain canopy (excluding option PS).

RV

Rotor balancing in vibration class R.

TP

Tropicalization.

U1

Servoventilation (excluding option PS).

3.5 Optionen Motoren

AA, AC, AD

Geben die Lage des Bremslüfterhebels zum Klemmenkastens an.

Standard ist 90° im Uhrzeigersinn beim Ansehen der Lüfterradseite.

AA = 0°, AC = 180°, AD = 90° entgegen dem Uhrzeigersinn.

AL, AR

Rücklaufsperre (nur für Motoren des Typs M). Um die Drehrichtung der gewünschten Abtriebswelle auszuwählen, siehe Abschnitt 9.0.

CF

Kapazitive filter.

D3

3 Bimetallschutzschalter.

E3

3 Kaltleiterthermistoren für eintourige Motoren und polumschaltbaren Motoren (gemäß der Isolierstoffklasse).

E6

3 Thermistoren wie für E3 gemäß Isolierstoffklasse + 3 Thermistoren zur Alarmmeldung. Ansprechtemperaturen entsprechen der nächst niedrigen Isolierstoffklasse (z.B.: F+B oder H+F).

F1

Schwungrad zum sanften Anfahren.

H1

Wicklungsheizung

Standardspannung 230V ± 10%.

M3

Klemmkasten mit 9 Klemmen.

PN

Die 60 Hz-Leistung wird an der 50 Hz-Normleistung ausgeglichen.

PS

Zweites Wellenende (schließt die Optionen RC und U1 aus).

PT

Der standarmäßig an 220/380V - 50 Hz zu betreibenden Motor wird mit der genannten Leistung bei 220/380V - 60 Hz getrieben.

RC

Schutzdach (schließt Option PS aus).

RV

Läufer in Vibrationsgrad R ausgewuchtet.

TP

Tropenfestigkeit.

U1

Fremdbelüftung (schließt Option PS aus).

3.5 Options moteurs

AA, AC, AD

Position angulaire du levier de déblocage du frein par rapport à la position de la boîte à borne en regardant du côté du ventilateur. Position standard = 90° sens horaire. AA = 0°, AC = 180°, AD = 90° sens anti-horaire.

AL, AR

Dispositif anti-retour (seulement pour moteurs type M). Pour la sélection du sens de rotation de l'arbre lent désiré se référer au paragraphe 9.0.

CF

Filtre capacitif.

D3

3 sondes bimétalliques.

E3

3 thermistances pour moteurs à simple polarité ou double polarité (selon les classes d'isolation).

E6

3 thermistances d'intervention selon les classes d'isolation + 3 thermistances d'alarme selon la classe inférieure à celle d'isolation (ex. F+B ou H+F).

F1

Volant pour démarrage progressif.

H1

Réchauffeurs anticondensation.

Alimentation standard 230 V ± 10%.

M3

Boîte à bornes (9 bornes).

PN

Puissance à 60 Hz correspondante à la puissance normalisée à 50 Hz.

PS

Double extrémité d'arbre (à l'exclusion de l'option RC et U1).

PT

Moteur standard 220/380-50 hZ alimenté à 220/380 - 60 Hz (avec déclassement de couple nominal).

RC

Capot de protection antipluie (exclu option PS).

RV

Equilibrage rotor avec degré de vibration R.

TP

Tropicalisation.

U1

Servo-ventilateur (option PS exclue).

Per ulteriori informazioni sulle note e opzioni, consultare i relativi capitoli nella sezione motori elettrici.

For further information on notes and options, consult the relevant chapters in the electric motors section.

Siehe die Kapitel im Teil Elektromotoren für weitere Informationen

Pour de plus amples informations sur les remarques et options, consulter les chapitres correspondants dans la section moteurs électriques.

3.6 Simbologia tabelle tecniche

Per una maggiore comprensione delle tabelle dei dati tecnici, riportiamo i simboli utilizzati:

Motoriduttore con motore integrato.

Gearmotor with compact motor.

Getriebemotor mit Kompaktmotor.

Motoréducteur avec moteur compact.

Motoriduttore con motore IEC.

Gearmotor with IEC motor

Getriebemotor mit IEC-Motor.

Motoréducteur avec moteur normalisé CEI.

Riduttore con albero entrata sporgente.

Gearbox with solid input shaft.

Getriebetyp mit freiem Antriebswellenende.

Réducteur avec arbre rapide sortant.

4.0 LUBRIFICAZIONE

I riduttori dal tipo A102 al tipo A303 compreso, sono forniti con lubrificazione permanente ad olio sintetico e non necessitano di alcuna manutenzione.

Gli altri tipi sono predisposti per la lubrificazione ad olio e pertanto dotati dei tappi di carico, livello e scarico olio (tabelle B2 e B3); sarà cura dell'utente immettere il lubrificante avvalendosi delle quantità (litri) indicate in tabella (B4). Evidenziamo però che tali quantità sono indicative, pertanto l'esatto livello dovrà essere valutato osservandolo dall'apposita spia (con il riduttore già installato nella corretta posizione di montaggio).

Dimensioni e collocazione dei tappi di carico, scarico e livello olio.

(B2)

4.0 LUBRICATION

Gearboxes from A102 to A303 are life lubricated with synthetic oil and do not require any maintenance.

The remaining types are designed for oil lubrication and therefore have oil filling, level and drain plugs (tables B2 and B3); users should fill the units with oil, consulting table (B4), with the correct quantity (litres). However, it must be underlined that these quantities are only guidelines, therefore users should check the correct level through the oil level plug (when the gearbox is installed in its correct mounting position).

Dimensions and location of oil filling, level and drain plugs.

4.0 SCHMIERUNG

Die Getriebe von Typ A102 bis Typ A303 werden mit Dauer-schmierung mit Syntheseöl geliefert und sind wartungsfrei.

Die anderen sind für die Ölschmierung vorgerüstet und verfügen daher über einen Einfüllverschluß, Ölstands- und Öl-ablaß-schrauben (Tabelle B2 und B3). Das Öl muß vom Kunden in der in Tabelle (B4) angegebenen Menge (Liter) eingefüllt werden. Wir weisen jedoch darauf hin, daß es sich bei diesen Angaben nur um Richtwerte handelt und daher der tatsächlich Ölbedarf durch das Schauglas geprüft werden muß (das Getriebe muß sich hierzu schon in seiner endgültigen Einbaulage befinden).

Abmessungen und Anordnung des Einfüll-, Ölstands- und Öl-ablaß-schrauben.

4.0 LUBRIFICATION

Les réducteurs du type A102 au type A303 compris sont fournis avec lubrification permanente à l'huile synthétique et n'ont besoin d'aucun entretien.

Les autres types sont prédisposés pour la lubrification à l'huile et par conséquent dotés de bouchons de remplissage, niveau et vidange d'huile (tableau B2 et B3); l'utilisateur devra introduire le lubrifiant en se conformant aux quantités (litres) indiqués sur le tableau (B4). Ces quantités sont toutefois indicatives et le niveau exact devra être contrôlé par le voyant spécial (avec le réducteur déjà installé dans la position correcte de montage).

Dimensions et emplacement des bouchons de remplissage, de vidange et niveau d'huile.

| Tipo Type Typ Type | Posizioni di montaggio / Mounting positions / Einbaulagen / Positions de montage | | | | | | | | | | | |

5.0 POSIZIONI DI MONTAGGIO E ORIENTAMENTO MORSETTIERA

Gli orientamenti delle morsettiere dei motori sono identificati osservando il motore dal lato ventola; l'orientamento standard è evidenziato in nero (**W**) come indicato nella tabella (B5).

5.0 MOUNTING POSITION AND TERMINAL BOX ORIENTATION

Orientation of motor terminal boxes can be ascertained by observing the motor from the fan side; standard orientation is shown in black (**W**) as in table (B5).

5.0 EINBAULAGEN UND LAGE DES KLEMMENKASTENS

Die Angaben zur Lage des Klemmenkastens beziehen sich auf das von der Lüfterseite her betrachtete Getriebe. Die Standardorientierung ist schwarz hervorgehoben (**W**), wie in Abbildung (B5) angegeben.

5.0 POSITIONS DE MONTAGE ET ORIENTATION BOITE A BORNE

Les orientations des boîtes à bornes des moteurs sont définies en regardant le moteur du côté ventilateur. L'orientation standard est indiquée en noir (**W**) comme d'après le tableau (B5).

(B5)

B3

B8

B6

B7

VA

VB

① ② Posizione flangia / Flange position / Flanschlage / Position bride

Posizione angolare leva di sblocco freno.
Nei motori autofrenanti, la leva di sblocco freno (se richiesta) ha l'orientamento standard a 90° rispetto alla morsetteria (posizione AB); specificare con relative opzioni qualora l'orientamento desiderato sia diverso.

Angular position of the brake release lever.
In brake motors the brake release lever (if requested) is 90° standard orientated with respect to the terminal box (position AB); different orientations must be specified on ordering phase by means of the proper option.

Winkellage des Handlüfterhebels.
Bei Bremsmotoren wird der Handlüfterhebel (auf Anfrage) standardmäßig auf 90° gegenüber des Klemmkastens (AB-Anordnung) geliefert; wird eine andere Anordnung verlangt, muß dies bei der Bestellung durch das geeignete Option angegeben werden.

Position angulaire levier débloccage frein.
Dans les moteurs freins, ce levier (si requis) aura l'orientation standard de 90° par rapport à la boîte à bornes (position AB); spécifier avec options relatives si l'orientation désirée est différente.

6.0 CARICHI RADIALI

Gli alberi di entrata e uscita dei riduttori possono essere soggetti a carichi radiali (determinati dal tipo di trasmissione realizzata) la cui entità può essere calcolata con la formula:

$$R_{c1-2} = \frac{2000 \cdot M_{1-2} \cdot K_r}{d} \quad (1)$$

- R_{c1-2} Carico radiale (N)
1 = su albero veloce
2 = su albero lento
- M_{1-2} Coppia sull'albero (Nm)
- d Diametro (mm) della ruota per catena, ingranaggio, puleggia, ecc.
- $K_r = 1$ Ruota per catena
 $K_r = 1.25$ Ingranaggio
 $K_r = 1.5 - 2.5$ Puleggia per cinghia a V

In base al punto di applicazione, come indicato in tabella (B6), possiamo avere i seguenti casi:

a) applicazione del carico R_{c1-2} sulla mezzeria dell'albero come indicato nella tabella (B6). Tale valore potrà essere confrontato direttamente con i dati delle tabelle rispettando la condizione

$$R_{c1-2} \leq R_{n1-2} \quad (2)$$

b) applicazione del carico ad una distanza x dalla battuta dell'albero come indicato nella tabella (B7). La conversione del nuovo valore di carico radiale ammissibile R_{x1-2} è data dalla seguente relazione:

$$R_{x1-2} = R_{n1-2} \cdot \frac{a}{b \cdot x} \quad (3)$$

valida per $x < c$

R_{n1-2} = Carico radiale ammissibile sulla mezzeria dell'albero [N] (tabelle dei carichi radiali)

- a = costante del riduttore
 b = costante del riduttore
 c = costante del riduttore
 x = distanza del carico dalla battuta dell'albero (mm)

(i valori delle costanti a,b,c, sono riportati nella tabella (B8)). Anche in questo caso, la condizione da verificare sarà la seguente:

$$R_{c1-2} \leq R_{x1-2} \quad (4)$$

(B6)

6.0 RADIAL LOADS

Gearbox input and output shafts can be subjected to radial loads (determined by the type of transmission used) the extent of which can be calculated with the following formula:

$$R_{c1-2} = \frac{2000 \cdot M_{1-2} \cdot K_r}{d} \quad (1)$$

- R_{c1-2} Radial load (N)
1 = input shaft
2 = output shaft
- M_{1-2} Torque (Nm)
- d Diameter (mm) of chain-wheel, gear, pulley, etc.
- $K_r = 1$ Chain-wheel
 $K_r = 1.25$ Gear
 $K_r = 1.5-2.5$ V-belt pulley

Depending on the application point as shown in table (B6), the following cases are possible:

a) load R_{c1-2} applied on shaft mid-point as indicated in table (B6). This value can be directly compared with table data by observing condition

$$R_{c1-2} \leq R_{n1-2} \quad (2)$$

b) load applied at distance x from shaft shoulder as shown in table (B7). Conversion to the new permitted radial load value R_{x1-2} is obtained from the following equation:

$$R_{x1-2} = R_{n1-2} \cdot \frac{a}{b \cdot x} \quad (3)$$

valid for $x < c$

R_{n1-2} = Permitted radial load on shaft mid-point [N] (radial load table)

- a = gearbox constant
 b = gearbox constant
 c = gearbox constant
 x = Distance of load from shaft shoulder (mm)

(constant values a,b,c are shown in table (B8)). The following condition must be checked in this case too:

$$R_{c1-2} \leq R_{x1-2} \quad (4)$$

6.0 RADIALKRÄFTE

Die Antriebs- und Abtriebswellen der Getriebe können Radialkräften ausgesetzt sein (die von der Übertragungsart abhängig sind), deren Ausmaß mit folgender Formel bestimmt werden kann:

$$R_{c1-2} = \frac{2000 \cdot M_{1-2} \cdot K_r}{d} \quad (1)$$

- R_{c1-2} Radialkraft (N)
1 = auf Abtriebswelle
2 = auf Abtriebswelle
- M_{1-2} Drehmoment an der Welle (Nm)
- d Durchmesser (mm) des Kettenrad, Zahnrad, Riemscheibe, usw.
- $K_r = 1$ Kettenrad
 $K_r = 1.25$ Zahnrad
 $K_r = 1.5 - 2.5$ Riemscheibe für V-Keilriemen

In Abhängigkeit vom Kraftangriffspunkt (siehe Abbildung B6) können sich folgende Fälle ergeben:

a) Kraftangriffspunkt R_{c1-2} auf der Mitte des Wellenendes wie in Abbildung (B6). Dieser Wert kann direkt mit den Daten der Tabelle verglichen werden, wobei folgende Bedingung zu beachten ist:

$$R_{c1-2} \leq R_{n1-2} \quad (2)$$

b) Kraftangriffspunkt mit Abstand X vom Wellenansatz wie in Abbildung (B7). Die Konversion des neuen Werts der zulässigen Radialkraft R_{x1-2} wird durch folgende Gleichung gegeben:

$$R_{x1-2} = R_{n1-2} \cdot \frac{a}{b \cdot x} \quad (3)$$

gültig für $x < c$

R_{n1-2} = zulässige Radialkraft auf der Mitte des Wellenendes [N] (Tabelle Radialkräfte)

- a = Getriebekonstante
 b = Getriebekonstante
 c = Getriebekonstante
 x = Abstand des Kraftangriffspunktes vom Wellenansatz (mm)

(die Werte der Konstanten a, b, c sind in Tabelle (B8) angegeben). Auch in diesem Fall ist folgende Bedingungen zu gewährleisten:

$$R_{c1-2} \leq R_{x1-2} \quad (4)$$

(B7)

6.0 CHARGES RADIALES

Les arbres d'entrée et de sortie des réducteurs peuvent être soumis à des charges radiales (déterminées par le type de transmission réalisée) dont l'entité peut être calculée avec la formule

$$R_{c1-2} = \frac{2000 \cdot M_{1-2} \cdot K_r}{d} \quad (1)$$

- R_{c1-2} Charge radiale (N)
1 = sur arbre rapide
2 = sur arbre lent
- M_{1-2} Couple sur l'arbre (Nm)
- d Diamètre (mm) de la roue à chaîne, engrenage, poulie, etc.
- $K_r = 1$ Roue à chaîne
 $K_r = 1.25$ Engrenage
 $K_r = 1.5 - 2.5$ Poulie pour courroie en V

Suivant le point d'application comme indiqué sur le tableau (B6), nous pouvons avoir les cas suivants:

a) application de la charge R_{c1-2} au milieu de l'arbre comme indiqué sur la figure (B6). Cette valeur pourra être directement comparée avec les données des tableaux en respectant la condition

$$R_{c1-2} \leq R_{n1-2} \quad (2)$$

b) application de la charge à une distance x de l'épaulement de l'arbre comme indiqué sur la figure (B7). La conversion de la nouvelle valeur de charge radiale admissible R_{x1-2} s'obtient avec l'équation suivante:

$$R_{x1-2} = R_{n1-2} \cdot \frac{a}{b \cdot x} \quad (3)$$

valable pour $x < c$

R_{n1-2} = Charge radiale admissible au milieu de l'arbre [N] (tableau des charges radiales).

- a = constante du réducteur
 b = constante du réducteur
 c = constante du réducteur
 x = distance de la charge à partir de l'épaulement de l'arbre (mm)

(les valeurs des constantes a, b, c, sont rapportées dans le tableau (B8)). Dans ce cas également, la condition à vérifier sera la suivante:

$$R_{c1-2} \leq R_{x1-2} \quad (4)$$

(B8)

| Tipo Type Typ Type | Costanti del riduttore / Gearbox constants / Getriebekonstanten / Constantes du réducteur | | | | | |
|-----------------------------|---|-------|------|---|------|------|

6.1 Carichi radiali sull'albero lento R_{n2}

I valori nominali dei carichi radiali riferiti alla mezzeria della sporgenza dell'albero lento sono indicati nelle tabelle di selezione dei motoriduttori e dei riduttori e si riferiscono alle forme costruttive R e D; essi sono calcolati rispettivamente in base alla coppia trasmessa M₂ e alla coppia nominale M_{n2} e nelle condizioni più sfavorevoli come orientamento del carico e come senso di rotazione.
Se i valori ammissibili risultassero inferiori a quelli desiderati, vi preghiamo di consultare il nostro servizio tecnico indicando l'esatta direzione del carico e il senso di rotazione dell'albero.

6.1 Radial loads on output shaft R_{n2}

Rated values of radial loads referred to the mid-point of the output shaft extension are shown in the gearmotor and gearbox selection charts and refer to versions R and D only. They are calculated respectively in accordance with transmitted torque M₂ and rated torque M_{n2} and for the worst possible conditions in terms of load orientation and rotation direction.
If permitted values are below required values, please consult our technical service department indicating exact load orientation and shaft rotation direction.

6.1 Radialkräfte auf die Abtriebswelle R_{n2}

Die Nennwerte der Radialkräfte auf die Mitte des Wellenendes der Abtriebswelle sind in den Tabellen für die Wahl der Getriebemotoren und Getriebe angegeben und beziehen sich nur auf die Bauformen R und D; diese Werte wurden entsprechend auf Basis des übertragenen Drehmomentes M₂ und des Nennmomentes M_{n2} und der ungünstigsten Bedingungen in Hinblick auf Krafrichtung und Drehrichtung berechnet.
Wenn die zulässigen Werte unter den verlangten Werten liegen, bitte unseren Technischen Kundendienst zu Rate ziehen, wobei die exakte Krafrichtung und die Drehrichtung der Welle anzugeben ist.

6.1 Charges radiales sur l'arbre lent R_{n2}

Les valeurs nominales des charges radiales référées au milieu de la longueur disponible de l'arbre lent sont indiquées dans les tableaux de sélection des motoréducteurs et des réducteurs et se réfèrent aux formes de construction R et D. Elles sont calculées respectivement suivant le couple transmis M₂ et le couple nominal M_{n2} et dans les conditions les plus défavorables d'orientation de la charge et du sens de rotation.
Si les valeurs admissibles se révélaient inférieures à celles désirées, nous vous prions de consulter notre service technique en indiquant la direction exacte de la charge et le sens de rotation de l'arbre.

6.2 Carichi radiali sull'albero veloce R_{n1}

Le tabelle di selezione dei riduttori riportano questi valori, riferiti alle velocità in entrata, calcolati sulla mezzeria della sporgenza dell'albero veloce del riduttore.
Se i valori ammissibili risultassero inferiori a quelli desiderati, vi preghiamo di consultare il nostro servizio tecnico indicando l'esatta direzione del carico e il senso di rotazione dell'albero.

6.2 Radial loads on input shaft R_{n1}

These values, which are contained in the gearbox selection charts, refer to input speed and are calculated at extension mid-point of the gearbox input shaft.
If permitted values are below required values, please consult our technical service department indicating exact load orientation and shaft rotation direction.

6.2 Radialkräfte auf die Antriebswelle R_{n1}

Die Tabellen für die Wahl der Getriebe enthalten diese Werte, bezogen auf die Antriebsdrehzahl und berechnet für die Mitte des Wellenendes der Antriebswelle des Getriebe.
Wenn die zulässigen Werte unter den verlangten Werten liegen, bitte unseren Technischen Kundendienst zu Rate ziehen, wobei die exakte Krafrichtung und die Drehrichtung der Welle anzugeben ist.

6.2 Charges radiales sur l'arbre rapide R_{n1}

Les tableaux de sélection des réducteurs reportent ces valeurs, référées aux vitesses d'entrée, calculées sur le milieu de la longueur disponible de l'arbre rapide du réducteur. Si les valeurs admissibles se révélaient à celles désirées, nous vous prions de consulter notre service technique en indiquant la direction exacte de la charge et le sens de rotation de l'arbre.

7.0 CARICHI ASSIALI A_{n1-2}

I carichi assiali massimi ammissibili si possono calcolare come segue:

$$A_{n1} = R_{n1} \cdot 0.2 \quad (5)$$

$$A_{n2} = R_{n2} \cdot 0.2 \quad (6)$$

7.0 THRUST LOADS A_{n1-2}

Maximum permitted thrust loads can be calculated as follows:

$$A_{n1} = R_{n1} \cdot 0.2 \quad (5)$$

$$A_{n2} = R_{n2} \cdot 0.2 \quad (6)$$

7.0 AXIALKRÄFTE A_{n1-2}

Die maximal zulässigen Axialkräfte können folgendermaßen berechnet werden:

$$A_{n1} = R_{n1} \cdot 0.2 \quad (5)$$

$$A_{n2} = R_{n2} \cdot 0.2 \quad (6)$$

7.0 CHARGES AXIALES A_{n1-2}

Les charges axiales maximum admissibles peuvent se calculer comme suit:

$$A_{n1} = R_{n1} \cdot 0.2 \quad (5)$$

$$A_{n2} = R_{n2} \cdot 0.2 \quad (6)$$

Anche in questo caso, in presenza di carichi assiali superiori a quelli ammissibili consultare il nostro servizio tecnico.

In this case too, if thrust loads exceed permitted value, consult our technical service department.

Auch in diesem Fall bei höheren Axialkräften unseren Technischen Kundendienst zu Rate ziehen.

Dans ce cas également, en présence de charges axiales supérieures à celles admissibles, consulter notre service technique.

8.0 ROTAZIONE ALBERI

8.0 SHAFTS ROTATION

8.0 WELLENDREHUNG

8.0 ROTATION ARBRES

Negli schemi riportati nella tabella (B9) sono indicati i sensi di rotazione standard dei riduttori ad assi ortogonali a 2, 3 e 4 stadi di riduzione.

Table (B9) shows standard directions of rotation for 2, 3 and 4 stage helical-bevel gearboxes.

Die auf die Tabelle (B9) angegebenen Bilder zeigen die Standarddrehrichtungen der 2-, 3- und 4- stufigen Kegelstirnradgetrieben.

Dans les schèmes reportés dans le tableau (B9) sont indiqués les sens de rotation standard des réducteurs avec arbres orthogonaux à 2, 3 et 4 étages de réduction.

(B9)

9.0 DISPOSITIVO ANTIRETRO

9.0 ANTI-RUN BACK DEVICE

9.0 RÜCKLAUFSPERRE

9.0 DISPOSITIF ANTI-RETOUR

A richiesta si può fornire il riduttore / motoriduttore munito di dispositivo antiretro che permette la rotazione dell'albero lento solo nel senso desiderato (opzione AL-AR).

An anti-run back device is available upon request to allow rotation of the output shaft in one direction only (option AL-AR).

Die Getriebe können mit einer Rücklaufsperr geliefert werden, um die Drehung der Abtriebswelle in einer Richtung zu ermöglichen (Option AL-AR).

Sur demande le réducteur/motoréducteur peut être fourni avec le dispositif anti-retour en permettant la rotation de l'arbre lent seulement dans un sens (option AL-AR).

La tabella (B10a) indica i riduttori nei quali è possibile applicare il dispositivo antiretro.

Table B10a shows the gearboxes in which the anti-run back device can be installed.

Auf der Tabelle B10a sind die Getriebe angegeben, mit denen die Rücklaufsperr verwendet werden kann.

Le tableau B10a indique les réducteurs dans les quels on peut appliquer le dispositif anti-retour.

In fase d'ordine specificare il senso di rotazione mediante le opzioni AL o AR (tabella B10b) nella designazione riduttore o in quella del motore.

Please specify in the order the required rotation direction through option AL or AR (table B10b) in the gearbox or motor designation. If not specified, the gearbox is supplied with the rotation direction AR.

Bei Bestellung bitte die gewünschte Drehrichtung durch die Option AL oder AR (Tabelle B10b) in den Getriebe oder Motorbezeichnung angeben. Wenn nicht angegeben, wird das Getriebe mit Drehrichtung AR geliefert.

A la commande on (tab. B10b) doit préciser le sens de rotation en indiquant les options AL ou AR dans la désignation du réducteur ou du moteur. En cas contraire le réducteur sera livré avec sens de rotations AR.

Se non specificato, il riduttore viene fornito con il senso di rotazione AR.

(B10a)

| Tipo / Type /Typ / Type | | | | | | | | | | |

- Applicazione antiretro possibile solo sul motore integrato / Anti-run back device can be fitted to compact motor only
Die Rücklaufsperr kann nur am integrierten Motor angebracht werden / Application du dispositif anti-retour possible uniquement sur le moteur intégré
- Applicazione antiretro possibile sia sul riduttore che sul motore integrato/ Anti-run back device can be fitted both to compact motor and gearbox
Die Rücklaufsperr kann sowohl am aGetriebe als auch am Motor angebracht werden / Application dispositif anti-retour possible aussi bien sur le réducteur que sur le moteur intégré

(B10b)

**10.0 ISTRUZIONI DI
INSTALLAZIONE**

Negli schemi indicati in tabella (B11) vengono riportati i 3 casi possibili per l'installazione dei riduttori tipo A alla struttura della macchina da operare.

Per ognuno di questi casi riportiamo nella tabella (B12) le dimensioni delle viti a testa esagonale da utilizzare.

Inoltre, per una facile installazione, suggeriamo di utilizzare il tipo di chiave mostrato in tabella (B11)

**10.0 INSTALLATION
INSTRUCTIONS**

Schemes in table (B11) show the 3 possible installation cases for A gear units to the machine frame.

For each of these circumstances, table (B12) indicates exagonal head screw sizes to be used.

Besides, in order to operate an easy installation, we suggest to use a wrench of the type shown in table(B11)

10.0 ANBAUANWEISUNGEN

In den auf die Tabelle (B11) angegebenen Bilder werden die 3 möglichen Fällen zum Anbau des Getriebes Typ A der zu betrie-benden Maschine dargestellt.

Für jede dieser Fällen sind auf die Tabelle (B12) die Abmessungen der zu verwendenden Sechskanteschraube angegeben. Im übrigen, für ein einfaches Anbau, schlagen wir vor, den Schlüsseltyp wie auf die Tabelle (B11) zu verwenden.

**10.0 INSTRUCTIONS POUR
L'INSTALLATION**

Dans les schèmes indiqués dans le tableau (B11) l'on a indiqué 3 cas possibles pour le montage des réducteurs type A à la structure de la machine.

Pour tous ces cas l'on doit se référer pour les dimensions des vis à tête hexagonales à employer, au tableau (B12).

Pour un montage plus soigneux nous conseillons l'emploi du type de clé indiquée au tableau (B11).

(B11)

14.0 PREDISPOSIZIONI POSSIBILI

Nella tabella (B13) vengono riportati gli accoppiamenti possibili in termini dimensionali. La scelta adeguata del riduttore da utilizzare deve essere effettuata seguendo le indicazioni riportate nei paragrafi 13.1 e 13.2 (della sezione A) e in base ai dati tecnici delle tabelle di selezione.

14.0 AVAILABLE MOTOR ADAPTORS

Combinations shown in table (B13) are for dimensional purpose only. The proper gearbox selection must be carried out following the information as per paragraph 13.1 and 13.2 (section A) and according to the technical data in the selection charts.

14.0 ANBAUMÖGLICHKEITEN

Tabelle (B13) stellt die mögliche Abmessungsanschlüsse dar. Das geeignete Getriebeauswahl muß gemäß den Informationen im Abschnitt 13.1 und 13.2 (Teil A) und gemäß den technischen Daten in den Anschlußstabellen durchgeführt werden.

14.0 PREDISPOSIZIONI POSSIBILI

Au tableau (B13) on peut trouver les accouplements possibles en termes dimensionnels. Le choix approprié du réducteur à employer doit être fait en suivant les indications reprises au paragr. 13.1 et 13.2 (section A) et sur la base des données techniques des tables de sélection.

I numeri fra parentesi si riferiscono ai rapporti per i quali non sono applicabili le grandezze motore indicate.

Nella tabella (B14) vengono indicati gli accoppiamenti possibili dei motoriduttori compatti (par. 11.0 e 12.0) che garantiscono il corretto dimensionamento meccanico del gruppo.

The numbers in brackets refer to those ratios for which the stated motor size is not applicable.

Table (B14) shows the possible connections of compact geared motors (par. 11.0 and 12.0) which guarantee the correct mechanical dimensioning of the group.

Die Nummer in Klammern beziehen sich auf die Übersetzungen, für die die angegebenen Motorgrößen nicht anzusetzen sind.

Die Tabelle (B14) gibt die verfügbare Anbaumöglichkeiten von kompakten Getriebemotoren (siehe Abchn. 11.0 und 12.0) an, die die richtige mechanische Bemessung der Gruppe gewährleisten.

Le nombres entre parenthèses se réfèrent aux rapports pour lesquels les tailles moteur indiquées ne sont pas applicables.

Dans le tableau (B14) on a indiqué les accouplements possibles des motoréducteurs compacts (par. 11.0 et 12.0) qui donnent la garantie de fonctionnement mécanique correcte du groupe.

Nella tabella (B14A) vengono riportati gli accoppiamenti possibili in termini dimensionali.

La scelta adeguata del riduttore da utilizzare deve essere effettuata seguendo le indicazioni riportate nei paragrafi 13.1 e 13.2 (della sezione A) e in base ai dati tecnici delle tabelle di selezione.

Combinations shown in table (B14A) are for dimensional purpose only. The proper gearbox selection must be carried out following the information as per paragraph 13.1 and 13.2 (section A) and according to the technical data in the selection charts.

Tabelle (B14A) stellt die mögliche Abmessungsanschlüsse dar. Das geeignete Getriebeauswahl muß gemäß den Informationen im Abschnitt 13.1 und 13.2 (Teil A) und gemäß den technischen Daten in den Anschlußstabellen durchgeführt werden.

Au tableau (B14A) on peut trouver les accouplements possibles en termes dimensionnels. Le choix approprié du réducteur à employer doit être fait en suivant les indications reprises aux paragr. 13.1 et 13.2 (section A) et sur la base des données techniques des tables de sélection.

15.0 POTENZA TERMICA P_t

La tabella (B15) indica i valori della potenza termica attribuiti ai vari tipi di riduttori; essi dovranno essere considerati in fase di scelta del riduttore o del motoriduttore effettuando le verifiche riportate nella sezione A ai capitoli 5.0 e 14.0.

Per i tipi di riduttore e per i rapporti non indicati, la potenza termica è superiore alla potenza meccanica pertanto non va tenuta in considerazione nelle verifiche.

15.0 THERMAL POWER P_t

Table (B15) indicates thermal power values according to type of gearbox. Such values must be considered when selecting gearboxes or gearmotors, by following the check procedure mentioned in chapters 5.0 and 14.0 of section A.

With regard to gearboxes and ratios not shown in the table, in such cases thermal power exceeds mechanical power, therefore it does not need to be considered when checking.

15.0 THERMISCHE GRENZLEISTUNG P_t

Die Tabelle (B15) zeigt die Werte der thermischen Grenzleistung für die verschiedenen Getriebetypen. Diese Werte müssen beim Getriebe- und Getriebemotorauswahl berücksichtigt werden, unter Nachprüfung wie geschrieben im Kapitel 5.0 und 14.0, Teil A.

Im Fall von Getriebe und nicht in die Tabelle angegebenen Überprüfungen nicht in Betracht zu ziehen.

15.0 PUISSANCE THERMIQUE P_t

Le tableau (B15) indique les valeurs de la puissance thermique, assignées aux divers types de réducteurs; elles devront être considérées lorsque l'on choisit le réducteur ou le motoréducteur, en vérifiant soigneusement les détails selon section A (chapitres 5.0 et 14.0).

Pour les types de réducteur et pour les rapports non indiqués, la puissance thermique est supérieure à la puissance mécanique; par la suite on ne devra pas la considérer au moment de la vérification.

(B15)

| Tipo Type Typ Type | P _t [kW] | |

16.0 MOMENTO D'INERZIA

Le tabelle tecniche seguenti indicano i valori del momento d'inerzia J_r [Kgm²] riferiti all'asse veloce del riduttore; per una migliore facilità di lettura riportiamo le definizioni dei simboli usati.

I valori riferiti a questo simbolo sono da attribuire al riduttore compatto senza motore. In questo caso, per avere il momento d'inerzia complessivo del motoriduttore, si dovrà sommare il valore corrispondente al riduttore compatto, nel rapporto prescelto, a quello del motore da applicare (dato reperibile nelle tabelle delle caratteristiche tecniche dei motori elettrici).

16.0 MOMENT OF INERTIA

The following technical tables indicate moment of inertia values J_r [Kgm²] referred to the gear unit high speed shaft. A key to the symbols used follows:

The values referred to this symbol are in respect of compact reduction units without motor. In this case, to obtain the overall moment of inertia for the gearmotor, add the value of the compact gear unit at the selected ratio to the applied motor (motor data can be found in the electrical motor selection charts).

16.0 TRÄGHEITSMOMENT

Die In den folgenden Tabellen angegebenen Trägheitsmomente J_r [Kgm²] beziehen sich auf die Getriebeantriebsachse. Um das Lesen der Tabellen zu erleichtern, werden folgende Symbole verwendet:

Kompaktgetriebe ohne Motor. In diesem Fall muß man, um das Gesamtträgheitsmoment des Getriebemotors zu erhalten, den dem Kompaktgetriebe mit der gewählten Übersetzung entsprechenden Wert mit dem Wert des anzuschließenden Motors addieren (dieser Wert kann den Elektromotorenauswahl tabellen entnommen werden).

16.0 MOMENT D'INERTIE

Les tableaux techniques suivants indiquent les valeurs du moment d'inertie J_r [Kgm²] du niveau de l'arbre rapide du réducteur; pour une plus grande facilité de lecture, nous vous prions de noter les définitions des symboles employés.

Les valeurs liées à symbole sont à assigner au réducteur compact sans moteur. Dans ce cas, afin d'avoir le moment d'inertie total du motoréducteur, on devra additionner la valeur correspondant au réducteur compact, dans le rapport choisi, à celle du moteur à assembler (donnée que l'on peut repérer dans les tableaux des caractéristiques techniques des moteurs électriques).

I valori relativi a questi simboli sono da attribuire al solo riduttore predisposto per attacco motore (grandezza IEC...).

I valori attribuiti al riduttore sono riferiti a questo simbolo.

Values under this symbol refer to gearboxes with IEC motor adapter (IEC size...).

This symbol refers to gearbox values.

Nur Getriebe vorbereitet für IEC-Motor (IEC-Größe...).

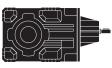

Dieses Symbol bezieht sich auf Getriebewerte.

Les valeurs liées à ces symboles sont à assigner au réducteur prédisposé pour accouplement moteur seulement (taille IEC...).

Les valeurs liées au réducteur sont assignées à ce symbole.

A Nella forma costruttiva "U..." il piano di appoggio 250 è rientrante rispetto al profilo esterno dei piedi.

A In Version U the supporting surface 250 recedes from outer feet profile.

A In der U-Bauform weist die Auflagefläche mit 250 gegenüber dem Außenprofil der Füße ein geringeres Maß auf.

A Pour la forme de construction "U" la surface 250 est en retrait du profil externe des pattes.

2.0 CARATTERISTICHE GENERALI
2.1 Programma di produzione.

I motori elettrici asincroni trifase del programma di produzione della BONFIGLIOLI RIDUTTORI sono previsti nelle forme costruttive base IMB5, IMB14 e loro derivate con le seguenti polarità: 2, 4, 6, 2/4, 2/6, 2/8, 2/12.

2.2 Normative

I motori descritti in questo catalogo sono costruiti in accordo alle Norme ed unificazioni applicabili evidenziate nella tabella (C1).

2.0 GENERAL CHARACTERISTICS
2.1 Production range

The asynchronous three-phase electric motors of BONFIGLIOLI RIDUTTORI's production, are available in basic designs IMB5 and IMB14 and derived versions, with the following polarities: 2, 4, 6, 2/4, 2/6, 2/8, 2/12.

2.2 Standards

The motors described in this catalogue are manufactured to the applicable standards shown in table (C1).

2.0 ALLGEMEINE EIGENSCHAFTEN
2.1 Produktprogramm

Die Dreiphasen-Asynchronmotoren aus dem Produktprogramm von BONFIGLIOLI RIDUTTORI gibt es in den Grundbauformen IMB5, IMB14 und deren Ableitungen mit folgenden Polzahlen: 2, 4, 6, 2/4, 2/6, 2/8 und 2/12.

2.2 Normen

Die in diesem Katalog beschriebenen Motoren sind in Übereinstimmung mit den in der Tabelle (C1) angegebenen einschlägigen Normen und Vereinheitlichungsrichtlinien konstruiert worden.

2.0 CARACTERISTIQUES GENERALES
2.1 Programme de production

Les moteurs électriques asynchrones triphasés du programme de production de BONFIGLIOLI RIDUTTORI sont prévus dans les formes de construction de base IMB5, IMB14 et leur dérivés avec les polarités suivantes: 2, 4, 6, 2/4, 2/6, 2/8, 2/12.

2.2 Réglementations

Les moteurs décrits dans ce catalogue sont construits en accord avec les Normes et standardisations applicables mises en évidence dans le tableau (C1).

(C1)

| Grado di vibrazione delle macchine elettriche Vibration level of electric machines. Schwingstärke bei elektrischen Maschinen Degré de vibration des machines électriques | CEI 2 - 23 | IEC 34 - 14 |

I motori corrispondono inoltre alle Norme straniere adeguate alle IEC 34 e riportate nella tabella (C2).

The motors also comply with foreign standards adapted to IEC 34 as shown in table (C2).

Die Motoren entsprechen außerdem an die IEC-Norm 34 angepaßten ausländischen Normen, die in Tabelle (C2) genannt werden.

En outre, les moteurs correspondent aux Normes étrangères adaptées aux IEC 34 indiquées dans le tableau (C2).

I motori gr. 63-100, M1-M3 costruiti in accordo alle Norme Canadesi sono certificati CSA, vengono forniti con targhetta speciale CSA e sono previsti con ingresso cavi NPT secondo CSA STANDARD C22-2 N° 0.5 Dimensioni e caratteristiche a richiesta.

The motors size 63-100, M1-M3, manufactured according to the Canadian Rules are CSA certified, are supplied with special CSA name plate and are equipped with NPT cable input according to CSA STANDARD C22-2 Nr. 0.5 Dimensions and features upon request.

Die gemäß den Canada Richtlinien hergestellten Motoren gr. 63-100, M1-M3 sind CSA bescheinigt, werden mit CSA Sondernamenschild geliefert und sind mit NPT Kabeleintritt gemäß CSA STANDARD C22-2 NR. 0.5 ausgestattet. Abmessungen un Eigenschaften auf Anfrage.

Les moteurs type 63-100, M1-M3 construits selon les Normes Canadiennes, sont certifiés CSA et sont fournis avec des plaquesmarques spéciales CSA; il sont prévus pour entrée de câbles NPT selon CSA STANDARD C22-2 N° 0.5 Dimensions et caractéristiques sur demande.

Direttive CEE 73/23 (LVD) e CEE 89/336 (EMC).

I motori delle serie BN ed M sono corrispondenti ai requisiti delle Direttive CEE 73/23 (Direttiva Bassa Tensione) e CEE 89/336 (Direttiva Compatibilità Elettromagnetica) e provvisti in targa della marcatura CE.

Directives EEC 73/23 (LVD) and EEC 89/336 (EMC).

Motors of the BN and M series comply with requirements of Directive EEC 73/23 (Low Voltage Directive) and EEC 89/336 (Electromagnetic Compatibility Directive) and bear the CE mark.

Richtlinie EWG 73/23 (LVD) und EWG 89/336 (EMC).

Die motoren der Serie BN und M entsprechen den Anforderungen der Richtlinie EWG 73/23 (Richtlinie - Niederspannung) und der Richtlinie 89/336 (Richtlinie - elektromagnetische Kompatibilität) und verfügen über das CE-Zeichen.

Directive CEE 73/23 (LVD) et CEE 89/336 (EMC).

Les moteurs de la série BN et M répondent aux conditions requises par les Directives CEE 73/23 (Directive Basse Tension) et CEE 89/336 (Directive compatibilité Electromagnétique), la marque CE est présente sur la plaquette signalétique.

In particolare per quanto riguarda la Direttiva EMC, la costruzione risulta in accordo alle Norme:

| | |
|-------|------------|
| BN | EN 50081-1 |
| | EN 50082-2 |
| BN-FA | EN 50081-2 |
| | EN 50082-2 |
| BN-FD | EN 50081-2 |
| | EN 50082-2 |

In particular, as far as Directive EMC is concerned, they are manufactured in compliance with the following standard:

| | |
|-------|------------|
| BN | EN 50081-1 |
| | EN 50082-2 |
| BN-FA | EN 50081-2 |
| | EN 50082-2 |
| BN-FD | EN 50081-2 |
| | EN 50082-2 |

IN Hinblick auf die Richtlinie EMC, stimmt die Konstruktion insbesondere mit den folgenden Normen überein:

| | |
|-------|------------|
| BN | EN 50081-1 |
| | EN 50082-2 |
| BN-FA | EN 50081-2 |
| | EN 50082-2 |
| BN-FD | EN 50081-2 |
| | EN 50082-2 |

Plus particulièrement, en ce qui concerne la Directive EMC, la fabrication répond aux Normes:

| | |
|-------|------------|
| BN | EN 50081-1 |
| | EN 50082-2 |
| BN-FA | EN 50081-2 |
| | EN 50082-2 |
| BN-FD | EN 50081-2 |
| | EN 50082-2 |

Se è richiesta la conformità alla Norma EN 50081-1, i motori con freno FM devono essere corredati di opportuno filtro capacitivo in ingresso al raddrizzatore (opzione CF).

I motori risultano inoltre conformi a quanto previsto dalle Norme IEC 204-1 "Equipaggiamento elettrico delle macchine".

If compliance with standard EN 50081-1 is required, motors with brake FM must have a capacitive filter at rectifier inlet (option CF). Furthermore, motors are in compliance with requirements of Standard IEC 204-1 "Electric equipment of machines".

Wird auch die Übereinstimmung mit der Norm EN 50081-1 verlangt, müssen die Motoren mit einer FM-Bremse am Eingang zum Gleichrichter (Option CF) mit einem angemessenen kapazitiven Filter ausgestattet werden.

Die Motoren resultieren darüber hinaus als mit den Normen IEC 204-1 "Elektrische Ausrüstung der Maschinen" konform.

Si la conformità à la Norme EN 50081-1 est nécessaire, les moteurs avec frein FM doivent être équipés de filtre capacitif à l'entrée du redresseur (option CF). De plus, les moteurs sont conformes aux normes IEC 204-1 "Equipment électrique des machines".

2.3 Tolleranze

Secondo le Norme sono ammesse le tolleranze indicate nella tabella (C3) sulle grandezze garantite.

2.3 Tolerances

According to Standards, the tolerances shown in table (C3) referring to guaranteed sizes, are permitted.

2.3 Toleranzen

Die Normen lassen die in Tabelle (C3) genannten Toleranzen bei den garantierten Größen zu.

2.3 Tolérances

Selon les Normes, les tolérances indiquées dans le tableau (C3) sont admises sur les tailles garanties.

3.1 Note motori

1) **- TENSIONE - FREQUENZA**
Da indicare sempre quando sono richieste tensioni / frequenze speciali. Tensione standard come descritto al par. 6.1.

- **GRADO DI PROTEZIONE**
Protezione IP56 (IP55 per autofrenanti) a richiesta.

- **CLASSE DI ISOLAMENTO**
Classi di isolamento H a richiesta.

2) TIPO DI FRENO

Disponibile, a richiesta, freno FA (freino c.a.).
Se non specificato il freno è omissso.

3) COPPIA FRENANTE

Valori standard come riportato nelle tabelle dati motore.
Altre coppie a richiesta (vedi tab. C24 - tipo FD, per tipo FA vedi documentazione relativa).

4) TIPO DI ALIMENTATORE

Da indicare solo per freni FD.
A richiesta, per i freni FD02, FD03, FD53, FD04, FD14, FD05, FD15, può essere fornito il raddrizzatore SB.

5) ALIMENTAZIONE FRENO

Freni tipo FD

Tensione alimentazione come descritto al par. 7.2.
Per alimentazione freno separata indicare:

a) il valore di tensione richiesto seguito da **SA** (p.e. 290SA);
b) nel caso di alimentazione diretta del freno in c.c. indicare il valore di tensione seguito da **SD** (p.e. 24SD); in questo caso il raddrizzatore è escluso dalla fornitura.

Freni tipo FA

Vedi documentazione motori specifica
Per alimentazione freno separata indicare il valore di tensione seguito da **SA** (p.e. 290SA).

Se non specificati espressamente, i dati previsti nei campi sopra indicati saranno assunti corrispondenti alla versione standard a catalogo.

3.2 Opzioni motori

AA, AC, AD

Posizione angolare leva di blocco freno rispetto alla posizione morsetteria visto lato ventola.

Posizione standard = 90° orari
AA = 0°, AC = 180°, AD = 90° antiorari.

CF

Filtro capacitivo.

D3

No. 3 sonde bimetalliche.

E3

No. 3 Termistori per motori a singola polarità e doppia polarità (in accordo alla classe di isolamento).

E6

No. 3 Termistori di intervento in accordo alla classe di isolamento + No. 3 termistori di allarme in accordo alla classe inferiore a quella di isolamento (es: F + B o H + F).

F1

Volano per avviamento progressivo.

H1

Riscaldatori anticondensa.
Alimentazione standard 230V ± 10%.

3.1 Notes on motors

1) **- VOLTAGE - FREQUENCY**
To be always specified when special voltages are required. Standard voltage as per par. 6.1.

- **PROTECTION CLASS**
IP56 protection class upon request (IP55 for brake motors).

- **INSULATION CLASS**
Isolation class H upon request.

2) BRAKE TYPE

FA brake (a.c. brake) also available on request.
Brake omitted if brake type not specified.

3) BRAKE TORQUE

Factory setting as per motor rating chart.
On request different brake torque settings are available. (See table C24 for FD brake type, see specific documentation for FA brake type).

4) RECTIFIER TYPE

To be indicated only for brakes type FD.
Upon request for brakes FD02, FD03, FD53, FD04, FD14, FD05, FD15, the rectifier SB can be supplied.

5) BRAKE SUPPLY

Brakes type FD.

Power supply as described at paragraph 7.2.
For external power supply, it must be stated:

a) the voltage value required followed by **SA** (e.g. 290SA);
b) in case of direct power supply of d.c. brake, state the voltage value followed by **SD** (e.g. 24SD); in this case the rectifier will be not supplied.

Brakes type FA.

See the relevant motor documentation.
For external power supply, state the voltage value followed by **SA** (e.g. 290SA).

If not specified, the data as above will be understood as the ones corresponding to default supply.

3.2 Motor options

AA, AC, AD

Angular position of the brake release lever with respect to the terminal box position locking from fan side.

Standard position = 90° clockwise
AA = 0°, AC = 180°, AD = 90° counter-clockwise.

CF

Capacitive filter.

D3

No. 3 bimetallic thermostates.

E3

No. 3 thermistors for single polarity motors and double polarity motors (according to the insulation class).

E6

No.3 switching thermistors according to the insulation class + No. 3 alarm thermistors according to the the class lower than the insulation class (f.e.: F+B or H+F).

F1

Flywheel for soft start.

H1

Anti-condensate heaters.
Standard voltage 230V ± 10%.

3.1 Anmerkungen zu den Motoren

1) **- SPANNUNG - FREQUENZ**
Ist immer anzugeben. Standardspannungen wie in Abschnitt 6.1 beschrieben

- **SCHUTZART**
Auf Anfrage IP56 (IP55 für Bremsmotoren) lieferbar.

- **ISOLIERSTOFFKLASSE**
Isolierstoffklasse H auf Anfrage lieferbar.

2) BREMSENTYP

Lieferbar auf Anfrage auch Bremse FA (Drehstrombremse).
Wenn nicht anders angegeben, fehlt die Bremse.

3) BREMSMOMENT

Standardwerte können aus den Datenblättern entnommen werden.
Andere Momente sind auf Anfrage verfügbar für Typ FD (siehe Tabelle C24, für Typ FA, siehe die entsprechende Unterlagen).

4) GLEICHRICHTERTYP

Ist nur für Bremse Typ FD anzugeben.
Auf Anfrage für Bremsen Typ FD02, FD03, FD53, FD04, FD14, FD05, FD15, kann das Gleichrichtertyp SB geliefert werden.

5) BREMSSPANNUNGSVERSORGUNG

Bremstyp FD.

Spannungsversorgung ist im Abschnitt 7.2 angegeben.
Für getrennte Spannungsversorgung, sind anzugeben:

a) den angefragten Spannungswert, gefolgt von **SA** (z.B. 290SA);
b) im Fall von direkten Spannungsversorgung von G.S.-Bremsen, muß man den Spannungswert gefolgt von **SD** angeben (z.B. 24SD); in diesem Fall erfolgt die Lieferung ohne Gleichrichter.

Bremstyp FA.

Siehe die entsprechenden Motorenunterlagen.
Für getrennte Spannungsversorgung, muß man den Spannungswert gefolgt von **SA** angeben (z.B. 290SA).

Wenn nicht angegeben, werden die obengenannten Daten als Standardausführung wie im Katalog verstanden.

3.2 Optionen Motoren

AA, AC, AD

Geben die Lage des Bremslüfterhebels zum Klemmenkasten an. Standard ist 90° im Uhrzeigersinn beim Ansehen der Lüfterradseite.

AA = 0°, AC = 180°, AD = 90° entgegen dem Uhrzeigersinn.

CF

Kapazitiver Filter.

D3

3 Bimetallfühler.

E3

3 Kaltleiterthermistoren für eintourige Motoren und polumschaltbaren Motoren (gemäß der Isolierstoffklasse).

E6

3 Thermistoren wie für E3 gemäß Isolierstoffklasse + 3 Thermistoren zur Alarmmeldung. Ansprechtemperatur entspricht der nächst niedrigen Isolierstoffklasse (z.B.: F+B oder H+F).

F1

Schwungrad zum sanften Anfahren.

H1

Wicklungsheizung.
Standardspannung 230 V ± 10%.

3.1 Remarques moteurs

1) **- TENSION - FREQUENCE**
A préciser dans tous les cas quand des tensions ou fréquences sont demandées. Tensions standard comme indiqué au par. 6.1.

- **DEGRE DE PROTECTION**
Protection IP56 (IP55 pour moteurs freins) sur demande.

- **CLASSE D'ISOLATION**
Classes d'isolation H sur demande.

2) TYPE DE FREIN

Frein FA (frein c.a.) également disponible, sur demande.
Si non spécifié, le frein est omis.

3) COUPLE DE FREINAGE

Valeurs standard comme indiqué dans les tableaux des caractéristiques moteurs.
Couples différents sur demande (voir tableau C24, type FD, pour type FA voir documentation spécifique).

4) TYPE D'ALIMENTATEUR

A préciser seulement pour type FD. Sur demande, pour les freins FD02, FD03, FD53, FD04, FD14, FD05, FD15, il est possible de fournir le redresseur SB.

5) ALIMENTATION DU FREIN

Freins type FD

Tension d'alimentation comme définie au paragraphe 7.2.
Pour une alimentation séparée du frein, indiquer:

a) la valeur de tension requise suivie de **SA** (ex. 280SA);
b) dans le cas d'une alimentation directe du frein en courant continue indiquer la valeur de tension à la suite de **SD** (EX. 24 SD); dans ce cas le redresseur est exclu de la fourniture.

Frein type FA

Voir documentation moteur spécifique.
Pour une alimentation du frein séparée indiquer la valeur de tension à la suite de **SA** (ex. 290SA).

En l'absence de précision, les caractéristiques prévues dans le domaine ci-dessus indiqué seront celles prévues du catalogue pour la version standard.

3.2 Options moteurs

AA, AC, AD

Position angulaire du levier de déblocage du frein par rapport à la position de la boîte à borne en regardant du côté du ventilateur.

Position standard = 90° sens horaire.
AA = 0°, AC = 180°, AD = 90° sens anti-horaire.

CF

Filtre capacitif.

D3

3 sondes bimétalliques.

E3

3 thermistances pour moteurs à simple polarité ou double polarité (selon les classes d'isolation).

E6

3 thermistances d'intervention selon les classes d'isolation + 3 thermistances d'alarme selon la classe inférieure à celle d'isolation (ex. F+B ou H+F).

F1

Volant pour démarrage progressif

H1

Réchauffeurs anticondensation.
Alimentation standard 230 V ± 10%.

|--|--|---|--|

4.0 CARATTERISTICHE MECCANICHE

4.1 Forme costruttive

I motori serie IEC sono previsti nelle forme costruttive indicate in tabella (C4) secondo le Norme CEI 2-14/ IEC 34-7.

Le forme costruttive sono le seguenti:

- IM B5** (base)
IM V1, IM V3 (derivate)
- IM B14** (base)
IM V18, IMV19 (derivate)

I motori in forma costruttiva IM B5 possono essere installati nelle posizioni IM V1 e IM V3; i motori in forma costruttiva IM B14 possono essere installati nelle posizioni IM V18 e IM V19. In questi casi, sulla targa del motore sarà indicata la forma costruttiva base IM B5 o IM B14. Nelle forme costruttive dove il motore assume una posizione verticale con albero in basso, si consiglia di richiedere l'esecuzione con tettuccio parapioggia (da prevedere sempre nel caso di motori autofrenanti). Tale esecuzione, prevista nelle opzioni, va richiesta espressamente in fase di ordine in quanto non è prevista nella versione base.

4.0 MECHANICAL CHARACTERISTICS

4.1 Versions

IEC motors are available in the design versions indicated in table (C4) in line with Standards CEI 2-14/IEC 34-7.

The design range comprises:

- IM B5** (basic)
IM V1, IM V3 (derived)
- IM B14** (basic)
IM V18, IM V19 (derived)

IM B5 design motors can be installed in positions IM V1 and IM V3; IM B14 design motors can be installed in positions IM V18 and IM V19. In such cases, the basic design IM B5 or IM B14 is indicated on the motor name plate. In design versions with a vertically located motor and shaft downwards, it is recommended to request the rain canopy (always necessary for brake motors). This facility, included in the options, should be specified when ordering as it is not part of the basic version.

4.0 MECHANISCHE EIGENSCHAFTEN

4.1 Bauformen

Die Motoren der Serie IEC weisen die in der Abbildung (C4) angegebene Bauform gemäß den Normen CEI 2-14/IEC 34-7 auf.

Die Bauformen sind:

- IM B5** (Grundmodell)
IM V1, IM V3 (Ableitungen)
- IM B14** (Grundmodell)
IM V18, IM V19 (Ableitungen)

Die Motoren mit der Bauform IM B5 können mit den Einbaulagen IM V1 und IM V3 eingebaut werden; die Motoren mit der Bauform IM B14 können mit den Einbaulagen IM V18 und IM V19 eingebaut werden. In diesen Fällen ist auf dem Leistungsschild des Motors die Bauform IM B5 oder IM B 14 angegeben. Bei Bauformen mit vertikaler Lage des Motors und nach unten gerichteter Welle wird die Ausführung mit Regenschuttabdeckung empfohlen (bei Bremsmotoren stets vorzusehen). Dieses wahlweise Zubehör muß ausdrücklich zum Zeitpunkt der Bestellung verlangt werden, da es bei der Grundausführung nicht vorgesehen ist.

4.0 CARACTERISTIQUES MECANQUES

4.1 Formes de construction

Les moteurs série IEC sont prévus dans les formes de construction indiquées sur le tableau (C4) selon les normes CEI 2-14/IEC 34-7.

Les formes de construction sont les suivantes:

- IM B5** (base)
IM V1, IM V3 (dérivées)
- IMB14** (base)
IM V18, IMV19 (dérivées)

Les moteurs en forme de construction IM B5 peuvent être installés dans les positions IM V1 et IM V3; les moteurs en forme de construction IM B14 peuvent être installés dans les positions IM V18 et IM V19. Dans ces cas, la forme de construction base IM B5 ou IM B14 sera indiquée sur la plaque du moteur. Dans les formes de construction où le moteur présente une position verticale avec arbre vers le bas, nous conseillons de demander l'exécution avec capot de protection contre la pluie (à prévoir toujours dans le cas de moteurs freins). Cette exécution, prévue dans les options, doit être expressément demandée en phase de commande étant donné qu'elle n'est pas prévue dans la version de base.

(C4)

4.2 Grado di protezione

I motori sono previsti nella soluzione standard con un grado di protezione IP55 (IP54 per autofrenante) in accordo alle Norme CEI 2-16 / IEC 34-5. Su richiesta possono essere forniti con grado di protezione aumentato IP56 (IP55 per autofrenante). Per installazione all'aperto i motori debbono essere protetti dall'irraggiamento diretto e, nel caso di montaggio in posizione verticale con l'albero in basso, è necessario prevedere il tettuccio di protezione.

4.3 Ventilazione

I motori sono raffreddati mediante ventilazione esterna (IC 411 secondo CEI 2-7 / IEC 34-6) e sono provvisti di ventola radiale in plastica che funziona in entrambi i sensi di rotazione. L'installazione deve assicurare una distanza minima dalla calotta copri-ventola alla parete in modo da non avere impedimenti all'ingresso aria e permettere la possibilità di eseguire l'opportuna manutenzione del motore e, se previsto, del freno. Su richiesta è possibile prevedere una ventilazione forzata indipendente (IC 416). Questa soluzione consente di aumentare il fattore di utilizzo del motore nel caso di alimentazione da inverter e funzionamento a giri ridotti (vedi par. 8.4 per maggiori dettagli).

4.4 Senso di rotazione

E' possibile il funzionamento di entrambi i sensi di rotazione (ad esclusione, ovviamente, dei motori provvisti di dispositivo antiretro). Con collegamento dei morsetti U1,V1,W1 alle fasi di linea L1,L2,L3 si ha rotazione oraria vista dal lato accoppiamento, mentre la marcia antioraria si ottiene scambiando fra loro due fasi.

4.5 Rumorosità

I valori di rumorosità, rilevati secondo il metodo previsto dalle Norme ISO 1680, sono contenuti entro i livelli massimi previsti dalle Norme CEI 2-24 / IEC 34-9.

4.6 Vibrazioni ed equilibratura

I motori sono equilibrati con chiave intera e rientrano nel grado di vibrazione N secondo quanto previsto dalle Norme ISO 2373. Per particolari esigenze di silenziosità potrà essere previsto, a richiesta, un'esecuzione antivibrante in grado R secondo le Norme ISO 2373. La tabella (C5) riporta i valori della velocità efficace di vibrazione nel campo di frequenza 10 - 1000 Hz.

4.2 Protection class

Motors are supplied standard with IP55 protection class (IP54 for brake motors) to CEI standards 2-16 / IEC 34-5. On request, motors can be supplied with a higher protection class IP56 (IP55 for brake motors). For outdoor installation, motors must be protected from direct sunlight and if mounted vertically with shaft downwards, the rain canopy must be provided.

4.3 Ventilation

The motors are cooled by external ventilation (IC 411 to CEI 2-7 / IEC 34-6) and are equipped with a plastic fan working in both directions. The motors must be installed allowing sufficient space between fan cowl and nearest wall to ensure free air intake and allow access for maintenance on motor and brake, if supplied. Independent, forced air ventilation (IC 416) can be supplied on request. This solution enables to increase the motor duty factor when driven by an inverter and operating at reduced speed (for further details, refer to paragraph 8.4)

4.4 Direction of rotation

Rotation is possible in both directions (with the exception, of course, of motors with anti run-back device). If terminals U1, V1, and W1 are connected to line phases L1,L2 and L3, clockwise rotation (looking from drive end) is obtained. For counterclockwise rotation, switch two phases.

4.5 Noise

Noise levels, measured using the method prescribed by ISO 1680 Standards, are within the maximum levels specified by Standards CEI 2-24 / IEC 34-9.

4.6 Vibrations and balancing

Motors are dynamically balanced complete with key and result in vibration class N, according to Norm ISO 2373. For particularly low noise requirement a lower vibration degree R (as per Norm ISO 2373) is available on request. Table (C5) shows actual values of vibration velocity within the frequency range of 10-1000 Hz.

4.2 Schutzart

Die Motoren verfügen in der Standardausführung gemäß den Normen CEI 2-16 und IEC 34-5 über die Schutzart IP55 (IP54 bei Bremsmotoren). Auf Wunsch können sie auch mit Schutzart IP56 (IP55 für Bremsmotoren) geliefert werden. Bei Installation im Freien müssen die Motoren vor direkter Sonneneinstrahlung geschützt und, wenn bei vertikaler Einbaulage und Welle nach unten, mit einer Schutzabdeckung versehen werden.

4.3 Lüftung

Die Motoren sind eigenbelüftet (IC 411 gemäß CEI 2-7 / IEC 34-6) und verfügen über ein Radiallüfterrad aus Kunststoff, das in beiden Drehrichtungen arbeiten kann. Bei der Installation muß sichergestellt werden, daß die Lüfterrad-abdeckung soweit von der Wand entfernt ist, daß der Luft-eintritt nicht behindert wird, und daß der Motor und (falls vorhanden) die Bremse problemlos gewartet werden können. Auf Wunsch können die Motoren mit Fremdbelüftung geliefert werden (IC 416). Diese Lösung ermöglicht das Motorbetriebsfaktor zu erhöhen, wenn vom Frequenzumrichter gesteuert und zu niedrigen Geschwindigkeit betrieben (siehe Abschnitt 8.4 für weitere Informationen).

4.4 Drehrichtung

Der Betrieb in beiden Drehrichtungen ist möglich (hiervon sind selbstverständlich die Motoren mit Rücklaufsperre ausgenommen). Schließt man die Klemmen U1, V1, W1 an die Phasen L1, L2, L3 an, dreht sich der Motor im Uhrzeigersinn (von der Verbindungs-seite her betrachtet); die Drehung im Gegenuhrzeigersinn erhält man, indem man zwei Phasen vertauscht.

4.5 Geräuschpegel

Die mit der von der ISO-Norm 1680 vorgesehenen Methoden gemessenen Lärmstärkewerte liegen innerhalb der gemäß den Normen CEI 2-24 und IEC 34-9 zulässigen Höchstgrenzen.

4.6 Schwingungen und Ausgleich

Die Motoren werden mit Paßfedern ausgeglichen und entsprechen dem Vibrationsgrad N gemäß den Normen ISO2373. Bei besonderen Anforderungen können die Motoren auf Anfrage eine schwingungsdämpfende Ausführung in Klasse R gemäß der Normen ISO2373 geliefert werden. Die Tabelle (C5) stellt die Effektivwerte der Schwingungsgeschwindigkeit im Frequenzfeld zwischen 10 und 1000 Hz dar.

4.2 Degré de protection

Les moteurs sont prévus dans la version standard avec un degré de protection IP55 (IP54 pour moteur frein) conformément aux normes CEI 2-16 / IEC 34-5. Sur demande, ils peuvent être fournis avec un degré de protection supérieur IP56 (IP55 pour moteurs freins). Pour l'installation à ciel ouvert, les moteurs doivent être protégés du rayonnement direct et dans le cas de montage en position verticale, avec l'arbre en bas, il est nécessaire de prévoir un capot de protection.

4.3 Ventilation

Les moteurs sont refroidis à l'aide d'une ventilation extérieure (IC 411 selon CEI 2-7, IEC 34-6) et sont dotés d'un ventilateur à ailettes en plastique qui fonctionne dans les deux sens de rotation. L'installation doit assurer une distance minimum entre le capot de protection du ventilateur et la paroi afin de permettre une bonne circulation de l'air et rendre plus aisé l'entretien du moteur et si prévu, du frein. Sur demande, il est possible de prévoir une ventilation forcée indépendante (IC 416). Cette solution permet d'augmenter le facteur d'utilisation du moteur en cas d'alimentation, via un variateur de fréquence, et pour un fonctionnement à faible vitesse (voir paragraphe 8.4 pour plus de détails).

4.4 Sens de rotation

Un fonctionnement dans les deux sens de rotation est possible (exception faite des moteurs dotés de dispositif anti-retour). Avec raccordement des bornes U1, V1,W1 aux phases de ligne L1, L2,L3, on a la rotation dans le sens des aiguilles d'une montre vue du côté liaison alors que le sens inverse s'obtient en intervertissant les deux phases entre elles.

4.5 Niveau de bruit

Les valeurs relevées selon la méthode prévue par les normes ISO 1680 sont situées sous les niveaux maximums prévus par les normes CEI 2-24 / IEC 34-9.

4.6 Vibrations et équilibrage

Les moteurs sont équilibrés avec clavette entière et correspondent au degré de vibration N selon Normes ISO 2373. En cas de nécessité particulière lorsqu'un niveau de bruit très faible est requis on pourra prévoir, sur demande, une execution sans vibration en degré R selon Normes ISO 2373. Le tableau (C5) indique les valeurs de la vitesse efficace de vibration dans la plage de fréquence 10 - 1000 Hz.

(C5)

| Grado di vibrazione Vibration degree Schwingungsklasse Degré de vibration | Velocità di rotazione n (min ⁻¹) Rotation speed n (min ⁻¹) Drehungsgeschwindigkeit n (min ⁻¹) Vitesse de rotation n (min ⁻¹) | Limiti della velocità di vibrazione (mm/s) Limits of the vibration velocity (mm/s) Grenzen der Schwingungsgeschwindigkeit (mm/s) Limites de la vitesse de vibration (mm/s) | | |
|--|---|---|-----------|-----------|
| | | 63 - 132 | 160 - 225 | 160 - 180 |
| N | 600 - 3600 | 1.8 | 1.8 | 2.8 |
| | >1800 - 3600 | 1.8 | 2.8 | 4.5 |
| R | 600 - 1800 | 0.71 | 1.12 | 1.8 |
| | >1800 - 3600 | 1.12 | 1.8 | 2.8S |

I valori si riferiscono a misure con motore liberamente sospeso e funzionamento a vuoto; tolleranza 10%.

Values refer to measures with freely suspended motor and void-operation; tolerance 10%.

Die Werte beziehen sich auf die Abmessungen mit stehendem Motor, ohne Getriebe und Leerlauf; Toleranz 10%.

Les valeurs se réfèrent à des mesures avec moteur librement suspendu et fonctionnement à vide; tolérance 10%.

4.7 Tolleranze dimensionali

L'estremità d'albero, la linguetta e la flangia hanno dimensioni e tolleranze secondo CEI-UNEL 13502, CEI-UNEL 13501, IEC 72. Le estremità d'albero sono provviste di foro filettato in testa secondo UNI 3221, DIN 332. I motori vengono forniti con linguetta inserita. La tabella (C6) riporta le tolleranze relative ai componenti dei motori elettrici BONFIGLIOLI RIDUTTORI.

4.7 Tolerances

Dimensions and tolerances of shaft ends, keys and flanges are according to CEI-UNEL 13502, CEI-UNEL 13501, IEC 72. The shaft ends are supplied with tapped hole on the head according to UNI 3221, DIN 332. The motors are supplied with key. Table (C6) shows tolerances for components of BONFIGLIOLI RIDUTTORI electric motors.

4.7 Toleranzen

Die Wellenende-, Feder- und Flanschabmessungen und -toleranzen sind gemäß CEI-UNEL 13502, CEI-UNEL 13501, IEC 72. Die Wellenenden sind mit Gewindebohrung auf den Kopf gemäß UNI 3221, DIN 332 geliefert. Die Motoren werden mit Federkeil geliefert. Die Tabelle (C6) zeigt die Toleranzen der Komponenten der Elektromotoren von BONFIGLIOLI RIDUTTORI.

4.7 Tolérances

Le bout d'arbre, la clavette et la bride ont les dimensions et les tolérances selon CEI-UNEL 13502, CEI-UNEL 13501, IEC 72. Les bouts d'arbre sont prévus avec trous taraudés selon UNI 3221, DIN 332. Les moteurs sont fournis avec clavette montée. Le tableau (C6) présente les tolérances relatives aux composants des moteurs électriques BONFIGLIOLI RIDUTTORI.

(C6)

| Componenti / Components / Komponenten / Composants | Dimensioni / Dimensions Abmessungen / Dimensions | Tolleranza / Tolerance Toleranz / Tolérance | |

| Flangia / Flange / Flansch / Bride | N | < ∅ 250 | j6 |
| | | ∅ 250 | h6 |

4.8 Morsettiera motore

La scatola coprimorsettiera è prevista di serie con un bocchettone pressacavo. La morsettiera principale è a sei morsetti per collegamento con capicorda. All'interno della scatola è previsto un morsetto per il conduttore di protezione. Le dimensioni dei perni di attacco sono riportate nella tabella (C7). Nel caso di motori autofrenanti, il raddrizzatore per l'alimentazione del freno è fissato all'interno della scatola e provvisto di adeguati morsetti di collegamento. Eseguire i collegamenti secondo gli schemi riportati all'interno della scatola coprimorsetti o nei manuali d'uso.

4.8 Motor terminal box

The terminal box is provided as standard with one cable gland. The main terminal board has six terminals for connection to the lead-in wire. A terminal for the protective conductor is provided inside the box. Terminals dimensions are listed in table (C7). For brake motors, the brake rectifier is fitted inside the box and has adequate connecting terminals. All connections must be carried out according to the diagrams inside the terminal box or in the instruction manuals.

4.8 Motorklemmenkasten

Der Klemmkasten verfügt serienmäßig über eine Kabeldurchführung. Die Hauptklemmleiste hat 6 Klemmen für den Anschluß mit Kabelschuhen. Im Innern des Klemmenkastens befindet sich eine Klemme für den Schutzleiter. Die Abmessungen der Ausschüsse sind in Tabelle (C7) angegeben. Bei den Bremsmotoren befindet sich auch der mit den erforderlichen Anschlußklemmen ausgestattete Gleichrichter für die Stromversorgung der Bremse im Klemmenkasten. Die Anschlüsse müssen gemäß den Diagrammen im Klemmenkasten oder in den Betriebsanweisungen durchgeführt werden.

4.8 Bornier moteur

Le couvercle du bornier est prévu de série avec un presseétoupe de fixation du câble. Le bornier principal prévoit six bornes pour raccordement avec cosses. Dans le boîtier se trouve une borne pour le conducteur de protection. Les dimensions des axes de fixation sont reportées dans le tableau (C7). Dans le cas de moteurs freins, le redresseur pour l'alimentation du frein est fixé à l'intérieur du boîtier et est doté de bornes spéciales de raccordement. Effectuer les connexions selon les schémas indiqués à l'intérieur du bornier, ou dans les manuels d'utilisation.

4.9 Ingresso cavi

Nell'esecuzione standard, l'ingresso dei cavi è previsto secondo le dimensioni e le disposizioni indicate nella tabella (C8):

4.9 Cable entry

In the standard version, cable entry is provided according to the dimensions and locations shown in table (C8):

4.9 Kabeldurchführung

Bei der Standardausführung ist die Kabeldurchführung wie in Tabelle (C8) angegeben angeordnet und dimensioniert:

4.9 Entrée câbles

Dans l'exécution standard, l'entrée des câbles est prévue selon les dimensions et les dispositions indiquées dans le tableau (C8):

(C8)

| Tipo / Motor type Motortyp / Moteur type | | Ingresso cavi / Cable entry / Kabeldurchführung / Entrée câbles | | Diam. max. cavo allacciabile [mm] Max. cable diam. allowed Max. zulässiger Kabeldurchmesser Diam. maxi. câble |

4.10 Cuscinetti

I cuscinetti previsti sono del tipo radiale a sfere con lubrificazione permanente precaricati assialmente. I tipi utilizzati sono indicati nelle tabella (C9). La durata nominale a fatica L_{10h} dei cuscinetti, in assenza di carichi esterni applicati è superiore a 40.000 ore calcolata secondo ISO 281.

4.10 Bearings

Life lubricated radial ball-bearings are supplied. The types in use are indicated in table (C9). Fatigue life of bearings L_{10h} , in the absence of external loads, is in excess of 40,000 hours calculated to ISO 281.

4.10 Lager

Bei den Lagern handelt es sich um Radialkugellager mit Dauerschmierung. Die verwendeten Typen sind in den Tabelle (C9) angegeben. Die Lebensdauer der Lager bei einer Beanspruchung L_{10h} ist, sofern keine externen Kräfte wirken, über 40.000 Stunden (Berechnung gemäß ISO 281).

4.10 Roulements

Les roulements prévus sont du type radial à billes avec lubrification permanente. Les types utilisés sont indiqués dans les tableau (C9). La résistance à la déformation L_{10h} des roulements en absence de charges extérieures appliquées est supérieure à 40.000 heures calculée selon ISO 281.

5.0 CARATTERISTICHE ELETTRICHE

5.0 ELECTRIC CHARACTERISTICS

5.0 ELEKTRISCHE EIGENSCHAFTEN

5.0 CARACTERISTIQUES ELECTRIQUES

5.1 Tensione

I motori a una velocità di grandezza IEC inferiore a 160 sono previsti nell'esecuzione normale per tensione 230V / 400V Y, 50 Hz con tolleranza di tensione $\pm 10\%$. I motori sono quindi adatti per funzionare sulla rete di distribuzione europea con tensione in accordo alla pubblicazione IEC 38 (Eurotensione).

5.1 Voltage

Single polarity motors of IEC size below 160 are supplied in the normal version for voltage values 230V / 400V Y, 50 Hz with voltage tolerance of $\pm 10\%$. Therefore motors are right to operate on the European voltage distribution net according to IEC 38 (Eurovoltage).

5.1 Spannung

Die eintourigen Motoren unter IEC-Größe 160 müssen in der Standardausführung mit einer Spannung von 230 V D / 400 V Y, 50 Hz mit einer Toleranz von $\pm 10\%$ gespeist werden. Darüber hinaus sind die Motoren geeignet für Spannungsbereiche gemäß IEC38 (Eurospannung) zu arbeiten.

5.1 Tension

Les moteurs à polarité unique de taille CEI inférieure à 160 sont prévus dans l'exécution normale pour tension 230V / 400V Y, 50 Hz avec tolérance de tension $\pm 10\%$. Les moteurs sont donc adaptés pour un fonctionnement sur le réseau électrique Européen avec tension en accord aux publications CEI 38 (Tension Européenne).

In targa sono indicati oltre alla tensione 230/400 V i campi di funzionamento consentiti e cioè:
 220 - 240V
 380 - 415V Y /50 Hz.
 In accordo alle Norme CEI 2-3, IEC 34-1 i motori possono funzionare alle tensioni sopra indicate con tolleranza del $\pm 5\%$.
 Per funzionamento ai limiti di tolleranza la temperatura può superare di 10 K il limite previsto dalla classe di isolamento adottata.
 In targa vengono indicati inoltre i valori corrispondenti al funzionamento a 60 Hz (i.e. 460Y, 60 Hz) ed il relativo campo di tensione: 440 - 480VY, 60 Hz.
 Per i motori autofrenanti con freno tipo FD le tensioni standard sono: 220V - 240V
 380V - 415V Y /50 Hz
 con tensione di alimentazione freno 230V $\pm 10\%$.
 La tabella (C10) riporta le tensioni previste per i motori.

Besides voltage 230/400 V in the name plate are stated also the allowed operating fields, i.e.:
 220-240V
 380-415V Y/50 Hz.
 According to rules CEI 2-3, IEC 34-1 the motors can operate with the above mentioned voltages with tolerances of $\pm 5\%$.
 For running at the tolerance limits, the temperature can exceed of 10 K the limit foreseen by the insulation class used.
 Moreover on the name plate are indicated the values corresponding to the 60 Hz operating (i.e. 460 Y, 60 Hz) and the relevant voltage field, 440 - 480VY, 60 Hz.
 For brake motors with brake type FD the standard voltages are: 220V - 240V
 380V - 415V Y /50 Hz
 with a brake power supply of 230V $\pm 10\%$.
 Table (C10) indicates relevant motor voltages.

Auf das Namensschild werden außer der Spannung 230/400V auch die ermöglichten Betriebsfelder angegeben, d.h.:
 220-240V D
 380-415V Y/50 Hz.
 Gemäß den Normen CEI 2-3, IEC 34-1 können die Motoren auf die oben genannten Spannungen mit Toleranzen von $\pm 5\%$ arbeiten.
 Bei Betrieb an den Spannungsgrenzen, kann die Temperatur bis zum 10K die für die verwendeten Isolierstoffklasse angegebenen Grenze überschreiten.
 Darüber hinaus wird auf den Typenschild die dem 60 Hz-Betrieb entsprechenden Werte angegeben (d.h. 460 Y, 60 Hz) und das entsprechende Spannungsfeld, 440-480VY, 60 Hz.
 Bei Bremsmotoren mit Bremstyp FD sind die Standardspannungen die folgende:
 220V - 240V D
 380V - 415V Y/50 Hz
 mit Bremsspannungsversorgung von 230V $\pm 10\%$.
 Die tabelle (C10) für die Motoren vorgesehenen Spannungen auf.

Sur la plaque marque sont indiqués en plus de la tension 230/400 V les plages de fonctionnement autorisées, seraient:
 220-240V
 380-415V Y/50 Hz.
 Selon les normes CEI 2-3, IEC 34-1 les moteurs peuvent fonctionner aux tension indiquées ci-dessus avec une tolérance de $\pm 5\%$.
 Pour un fonctionnement à la limite de tolérance, la température peut dépasser les 10K, la limite prévue de la classe d'isolation choisie.
 Sur la plaque marque sont de plus indiqués les valeurs correspondantes au fonctionnement en 60 Hz (ex.460Y, 60 Hz) et la relative plage de tension: 440 - 480VY, 60 Hz.
 Pour les moteurs freins avec frein type FD les tensions standard sont :
 220V - 240V
 380V - 415V Y /50 Hz
 avec tension d'alimentation du frein 230V $\pm 10\%$.
 La tableau (C10) indique les tensions prévues pour les moteurs.

(C10)

| Motore / Motor / Motor / Moteur | | Tensione / Voltage (10%) Spannung / Tension | Esecuzione avvolgimento / Winding type Wicklungsart / Exécution bobinage |
|---------------------------------|-----------------|---|---|
| 63 - 132 | M1 - M4 | 230 / 400Y, 50 Hz. 460Y 60Hz | Standard |
| 160 -280 | — | 400 / 690Y 50Hz 460 60 Hz | Standard |
| 100 - 132 | M3 - M 4 | 400 / 690Y 50Hz 460 60 Hz | A richiesta |

I motori a due velocità, i tipi M3LC4, M3LC6 e BN160 - BN280, sono previsti per tensione nominale standard 400V; tolleranze applicabili secondo CEI 2-3, IEC 34-1.

All double speed motors types M3LC4, M3LC6 and BN160 - BN280, are foreseen for standard nominal voltage 400V; applicable tolerances according to CEI 2-3, IEC 34-1.

Alle polumschaltbaren Motoren, die Typen M3LC4, M3LC6 und BN160 - BN 280, sind nicht umschaltbar, standard-mä ßig nur für ein Spannung 400V vorgesehen; geltenden Toleranzen gemäß CEI 2-3, CEI 34-1.

Tous les moteur à deux vitesses, les types M3LC4, M3LC6 et BN160 - BN280, sont prévus pour une tension nominale applicables selon CEI 2-3, CEI 34-1.

Nella tabella (C11) sono indicati i vari tipi di collegamenti previsti per i motori in funzione della polarità.

In the table (C11) are to be found the several connection types foreseen for motors.

Auf die Tabelle (C11) werden die verschiedenen für die Motoren vorgesehenen Anschlußtypen angegeben.

Dans le tableau (C11) sont indiqués les différents types de connexion prévus pour les moteurs.

(C11)

| Motore / Motor / Motor / Moteur | | Poli / Pole / Polig / Pôles | Collegamento avvolgimento / Winding connection Wicklungsanschluß / Connexion du bobinage |
|---------------------------------|----------------|-----------------------------|---|
| 63 - 280 | M1 - M4 | 2, 4, 6 | / Y |
| | | 2/4 | YY (Dahlander) |
| | | 2/6, 2/8, 2/12 | Y / Y (due avvolgimenti / Two windings / zwei Wicklungen / Deux bobinage) |

I motori a singola polarità richiesti con tensione nel campo 200 V 346V sono realizzati con avvolgimento collegato a triangolo (p.e. richiesto 200V, esecuzione 200 /346Y V); per i tipi 63 - 132 con tensioni V 346V il collegamento è a stella (p.e. 400V, fornito 230 /400Y V), mentre per la grandezza 160, l'esecuzione standard e' a triangolo (p.e. richiesto 400V, fornito 400 /690Y V).

Single poles motors, with voltage 200 V 346V have deltaconnected windings (e.g. 200V required, 200 /346Y V supplied). Motor size 63-132 with voltage V 346V have a connection of the star type (e.g. 400V required, 200 /346Y V supplied), whereas motor sizes 160 has a standard delta connection (e.g. 400V required, 400 /690Y V supplied).

Die einpoligen Motoren, die mit einer Spannung im Bereich von 200 V 346V angefordert werden, werden mit einer Wicklung mit Dreilecksschaltung verwirklicht (werden z.B. 200V gefordert, erhält man die Ausführung 200 /346Y V); für die Typen 63-132 mit Spannungen V 346V hat man eine Sternschaltung (z.B. 400V, geliefert wird 230 /400Y V), während die Standardausführung für die Baugrößen 160, die Dreieckschaltung ist (z.B. 400V gefordert, geliefert wird 400 /690Y V).

Die einpoligen Motoren, die mit einer Spannung im Bereich von 200 V 346V angefordert werden, werden mit einer Wicklung mit Dreilecksschaltung verwirklicht (werden z.B. 200V gefordert, erhält man die Ausführung 200 /346Y V); für die Typen 63-132 mit Spannungen V 346V hat man eine Sternschaltung (z.B. 400V, geliefert wird 230 /400Y V), während die Standardausführung für die Baugrößen 160, die Dreiecksschaltung ist (z.B. 400V gefordert, geliefert wird 400 /690Y V).

A richiesta, per tensioni V 346V i motori 100 - 132, possono essere forniti con collegamento a triangolo; in questo caso dovrà essere sempre indicato in designazione anche il corrispondente valore a stella (p.e. richiesto 400V , indicare 400/690V).

I motori a due velocità 63-90, M1-M2 sono disponibili con tensioni comprese tra 200-500V; per le altre grandezze le tensioni previste sono tra 200-620V (collegamenti come in tab. C11).

I motori grandezza 100 - 280, M3 - M4 a due velocità (escluso 2/4 poli), a richiesta possono essere forniti con morsetti a 12 morsetti; solo in questo caso specificare in designazione entrambe le tensioni (p.e. richiesto 400V, indicare 400/690V).

Per l'alimentazione dell'eventuale freno fare riferimento al paragrafo 6.2 e 6.3.

On request for voltages V 346V motors 100-132, can be supplied with delta connection. In this case, corresponding star value should always be indicated in the relevant description (e.g. for 400V required indicate 400/690V).

Double polarity motors 63-90, M1-M2 are available with voltages Within 200-500V. For other sizes voltages are within 200-690V (for connection see table c11).

On request double polarity motors, sizes 100-280, M3-M4 (2/4 poles excluded) can be supplied with a 12 terminal box; Only in this case specify both voltage in relevant description (e.g. for 400V required, indicate 400/690V).

As for brake power supply, refer to paragraph 6.2 and 6.3.

Auf Anfrage können Spannungen V 346V die Motoren 100-132, M3 mit einer Dreiecksschaltung geliefert werden; in diesem Fall muß in der Bezeichnung immer auch der entsprechende Sternwert angegeben werden (z.B. bei erforderlichen 400V ist 400/690V angeben).

Die Motoren mit zwei Geschwindigkeiten 63-90 sind mit Spannungen zwischen 200-500V verfügbar, bei den anderen Bau größen sind Spannungen zwischen 200-690V vorgesehen (Schaltungen gemäß Tab. C11)

Die motoren mit zwei Geschwindigkeiten 100-280, M3-M4 (ausgenommen 2/4 Pole) können auf Anfrage mit einem, mit 12 klemmen ausgestatteten Klemmenbrett geliefert werden; nur in diesem Fall müssen in der Bezeichnung beide Spannungen spezifiziert werden (z.B. 400V gefordert, ist 400/690V anzugeben).

Für die Versorgung der eventuell vorhandenen Bremse, ist Bezug auf den Par. 6.2 und 6.3 zu nehmen.

Sur demande, pour des tensions V 346V les moteurs 100-132, M3 peuvent être fournis avec un branchement en triangle; dans ce cas, la valeur correspondante en étoile (ex. requis 400V , indiquer 400/690V) doit toujours être indiquée dans la désignation.

Les moteurs à deux vitesses 63-90 sont disponibles avec des tensions comprises entre 200-500V; pour les autres tailles les tensions prévues sont comprises entre 200 et 690V (branchements voir tab. C11.)

Les moteurs taille 100-280, M3-M4 à deux vitesses (sauf 2/4 poles) peuvent être fournis sur demande avec à bornier à 12 bornes; uniquement dans ce cas, spécifier les deux tensions dans la désignation (ex. requis 400V, indiquer 400/690V).

En ce qui concerne l'alimentation de l'éventuel frein, se référer au paragraphe 6.2 et 6.3.

5.2 Frequenza

I motori ad una velocità nell'esecuzione standard riportano in targa oltre alle tensioni del funzionamento a 50 Hz il campo di tensione 440 - 480V 60 Hz (escluso motori autofrenanti con freno FD) con potenza aumentata di circa il 20%

La potenza di targa dei motori a 60Hz corrisponde a quanto riportato nella tabella (C12) seguente:

5.2 Frequency

In the name plate of single poles motors, standard version, besides the operating voltages at 50 Hz is also stated the voltage field 440 - 480V 60 Hz (except for brake motors with brake type FD) with an increased power of about 20%.

The power in the name plate of 60 Hz motors corresponds to the following table (C12):

5.2 Frequenz

Bei eintourigen Motoren in der Standardausführung wird außer den 50 Hz-Betriebsspannungen auch den Spannungsfeld 440 - 480V 60 Hz angegeben (mit Ausnahme von Bremsmotoren mit Bremsentyp FD) mit einer erhöhten Leistung von ungefähr 20%.

Die Leistung auf das Namensschild von 60 Hz-Motoren entspricht den Daten aus der folgenden Tabelle (C12):

5.2 Fréquence

Les moteurs à une vitesse en exécution standard reportent sur la plaque marque en plus des tension du fonctionnement à 50 Hz la plage de tension 440 - 480V 60 Hz (moteurs freins avec frein FD exclus) avec puissance augmentée de 20% env.

La puissance sur la plaque marque des moteurs à 60 Hz correspond à celle indiquée au tableau (C12) suivant:

Per i motori a due velocità con alimentazione 60 Hz l'incremento di potenza previsto rispetto a quanto riportato nelle tabelle dati tecnici sarà del 15%.
Se la potenza richiesta a 60 Hz corrisponde alla potenza normalizzata a 50 Hz specificare in designazione l'opzione PN.
I motori avvolti per frequenza 50 Hz possono essere utilizzati in reti a 60 Hz secondo quanto riportato in tabella (C13).

For double polarity motors with 60 Hz power supply the power increase with respect to the values shown in the technical tables will be equal to 15%.
If the required 60 Hz power corresponds to the normalized 50 Hz power, when designing it is necessary to specify the option PN.
Motors with windings suitable for 50 Hz can be used with 60 Hz supply nets according to the values shown in table (C13).

Für polumschaltbare Motoren mit 60 Hz Spannungsversorgung ist die vorgesehene Leistungserhöhung gemäß den Datenblätter von 15%.
Wenn die angefragte 60 Hz-Leistung der normierten 50 Hz-Leistung entspricht, geben bei der Bezeichnung das Option PN an.
Die Motoren mit einer Wicklung für eine Frequenz von 50 Hz können entsprechend den Angaben von Tabelle (C13) an Netze mit 60 Hz angeschlossen werden.

Pour les moteurs à deux vitesses avec alimentation 60 Hz l'augmentation de puissance prévue par rapport aux valeurs indiquées dans les tableaux techniques, sera de 15%.
Si la puissance requise à 60 Hz correspond à la puissance normalisée à 50 Hz on devra indiquer l'option PN.
Les moteurs bobinés pour fréquence 50 Hz peuvent être utilisés sur réseau à 60 Hz selon les indications du tableau (C13).

(C13)

** Moteurs frein FD exclus.

Per i motori con alimentazione da rete 220/380V 60 Hz e potenza relativa a 50 Hz, possono essere impiegati i motori normali (escluso motori a doppia polarità ed autofrenanti FA) accettando sovratemperature superiori e applicando i declassamenti riportati in tabella (C13); specificare in ordine l'opzione PT.

For motors with net power supply 220/380V 60 Hz and relevant 50 Hz power, standard motors can be used (except for double polarity motors and FA brake motors) accepting higher temperatures rises and applying the derating values as in table (C13); when ordering the option PT must be specified.

Für die Motoren mit Netzspannungsversorgung 220/380V 60 Hz und entsprechende 50 Hz-Leistung können die Standardmotoren verwendet werden (mit Ausnahme von polumschaltbaren Motoren und Bremsmotoren Typ FA), unter Annahme von höheren Temperatursteigerungen und bei Anwendung von der auf die Tabelle (C13) angegebenen Deklassierungen; bei der Bestellung muß das Option PT angegeben werden.

Pour les moteurs alimentés sur le réseau 220/380 60 Hz avec puissance correspondante à 50 Hz, des moteurs normaux peuvent être employés (moteurs à deux polarités et freins FA exclus) en acceptant des élévations de température supérieures et en appliquant les déclassements indiqués au tableau (C13); on devra indiquer l'option PT à la commande.

5.3 Potenza nominale

Le tabelle dei dati tecnici del catalogo riportano le caratteristiche funzionali a 50 Hz in condizioni ambientali standard secondo le Norme CEI 2-3 / IEC 34-1 (temperatura 40 °C e altitudine <1000 m s.l.m.).
I motori possono essere impiegati ad altitudini superiori e temperature comprese tra 40 °C e 60 °C applicando i declassamenti di potenza indicati nelle tabelle (C14) e (C15).

5.3 Rated power

The catalogue selection charts show technical data at 50 Hz under standard environmental conditions to CEI 2-3 / IEC 34-1 Standards (ambient temperature 40 °C and altitude <1000 m a.s.l.).
The motors can be used at higher altitudes and in the temperature range 40°C - 60°C by applying the derating factors indicated in tables (C14) and (C15).

5.3 Nennleistung

Die Betriebsdatentabellen des Katalogs enthalten die technischen Daten bei einer Frequenz von 50 Hz bei normalen Umgebungsbedingungen gemäß den Normen CEI 2-3 und IEC 34-1 (Temperatur 40°C und Höhe <1000 m ü.d.M.). Die Motoren können in größeren Höhen und bei Temperaturen zwischen 40°C und 60°C betrieben werden, wenn man die in den Tabellen (C14) und (C15) angegebenen Rückstufungen anwendet.

5.3 Puissance nominale

Les tableaux fonctionnels du catalogue présentent les caractéristiques techniques à 50 Hz dans des conditions ambiantes standard selon les normes CEI 2-3, IEC 34-1 (température 40°C et altitude <1000 m).
Les moteurs peuvent être employés à des altitudes supérieures et à des températures comprises entre 40°C et 60°C en appliquant les déclassements de puissance indiqués dans les tableaux (C14) et (C15).

(C14)

| Temperatura ambiente / Ambient temperature / Umgebungstemperatur / Température ambiante(°C) | 40 | 45 | 50 | 55 | 60 |
|--|-----|----|----|----|----|
| Potenza ammissibile in % della potenza nominale / Permitted power as a % of rated power Zulässige Leistung in % der Nennleistung / Puissance admissible en % de la puissance nominale | 100 | 95 | 90 | 85 | 80 |

(C15)

I coefficienti di potenza per variazione d'altitudine si riferiscono a temperatura ambiente compresa tra 30 e 40 °C.
Quando è richiesto un declassamento del motore superiore al 15%, contattare il ns. servizio tecnico.

The power coefficients for altitude variation refer to an ambient temperature between 30 and 40°C.
When is required a motor derating higher than 15%, contact our customers'assistance department.

Die Leistungskoeffizienten zur Höheänderung beziehen sich auf einer Umwelttemperatur zwischen 30 und 40°C.
Wenn eine Motordeklassierung höher als 15% gefragt ist, wir bitten um Rückfrage.

Les coefficients de puissance pour une variation d'altitude se réfèrent à une température ambiante comprise entre 30° et 40 °C. Si un déclassement du moteur supérieur à 15% est requis, on devra contacter notre service technique.

5.4 Classe d'isolamento

I motori descritti in questo catalogo impiegano materiali isolanti (filo smaltato, isolanti di superficie, tipo d'impregnazione) in classe F o H.

L'accurata scelta dei componenti del sistema isolante consente l'impiego dei motori in climi tropicali ed in presenza di vibrazioni normali.

Per applicazioni in presenza di forti aggressivi chimici o elevata umidità contattare il ns. servizio tecnico.

5.5 Tipo di servizio

Se non indicato diversamente, la potenza dei motori riportata a catalogo si riferisce al servizio continuo S1.

Per i motori utilizzati in condizioni diverse da S1 sarà necessario identificare il tipo di servizio previsto con riferimento alle Norme CEI 2-3 / IEC 34-1.

In particolare, per i servizi S2 ed S3, è possibile ottenere una maggiorazione della potenza termica rispetto a quella prevista per il servizio continuo secondo quanto indicato nella tabella (C16) valida per motori ad una velocità. Per motori a doppia polarità interpellare il nostro servizio tecnico.

5.4 Insulation class

The motors described in this catalogue use insulating materials (painted wire, surface insulation treatments, impregnation type) to Class F or H.

An accurate selection of insulation material allows use of motors in tropical climates at normal vibration level.

For applications in environments pervaded by very aggressive chemical elements or with high humidity, contact our technical service department.

5.5 Type of duty

Unless otherwise indicated, the power of motors specified in the catalogue refers to continuous duty S1.

For motors used under conditions other than S1, the type of duty required must be specified with reference to CEI 2-3/IEC 34-1 Standards.

In particular, for duties S2 and S3, power can be increased with respect to continuous duty power according to data in table (C16) applicable to single speed motors. For double polarity motors, contact our technical service department.

5.4 Isolierstoffklasse

Die in diesem Katalog beschriebenen Motoren sind mit Isolierstoffen (Emaildraht, Oberflächenisierungen, Typ der Imprägnierung) der Klasse F oder H.

Die sorgfältige Wahl der Komponenten des Isoliersystems gestattet den Betrieb der Motoren auch in tropischen Klimazonen.

Für Anwendungen in aggressiven oder abrasive Umgebungen oder mit hoher Luftfeuchte (90%) unseren Technischen Kundendienst zu Rate ziehen.

5.5 Betriebsart

Sofern nicht anders angegeben, bezieht sich die im Katalog angegebene Motorleistung auf den Dauerbetrieb S1.

Bei den Motoren, die für eine andere Betriebsart als S1 vorgesehen sind, muß man die Betriebsart unter Bezugnahme auf die Normen CEI 2-3/IEC 34-1 identifizieren.

Insbesondere kann man für die Betriebsarten S2 und S3 nach der für Motoren mit einer Drehzahl. Gültigen Tabelle (C16) eine Überdimensionierung der Leistung für den Dauerbetrieb im Vergleich zur vorgesehenen Betriebsart erreichen. Für polumschaltbaren Motoren, bitte Rückfrage.

5.4 Classe d'isolation

Les moteurs décrits dans ce catalogue utilisent des matériaux isolants (fil émaillé, isolants de surface, type d'impregnation) en classe F ou H.

Le choix soigné des composants du système d'isolation permet d'utiliser les moteurs dans des climats tropicaux et en présence de vibrations normales.

Pour les applications en présence de fortes agressions chimiques et de degré d'humidité élevé, contacter notre service technique.

5.5 Type de service

Sauf indication contraire, la puissance des moteurs reportée dans le catalogue se réfère au service continu S1.

Pour les moteurs utilisés dans des conditions différentes de S1, il sera nécessaire d'identifier le type de service prévu en se référant aux normes CEI 2-3/IEC34-1.

En particulier, pour les services S2 et S3, il est possible d'obtenir une majoration de la puissance par rapport à celle prévue pour le service continu selon ce qui est indiqué dans le tableau (C16) valable pour les moteurs à une vitesse. Pour les moteurs à double polarité, contacter notre service technique.

(C16)

* La durata del ciclo dovrà comunque essere uguale o inferiore a 10 minuti; se superiore interpellare il nostro servizio tecnico.

* Cycle duration must, in any event, be equal to or less than 10 minutes; if this time is exceeded, please contact our technical service department.

* Die Zyklusdauer muß in jedem Fall kleiner oder gleich 10 Minuten sein. Wenn sie darüber liegt, unseren Technischen Kundendienst zu Rate ziehen.

* La durée du cycle devra être inférieure ou égale à 10 minutes. Si supérieure, contacter notre service technique.

Rapporto di intermittenza:

$$I = \frac{t_f}{t_f + t_r} \cdot 100 \quad (1)$$

t_f = tempo di funzionamento a carico costante
 t_r = tempo di riposo

Intermittence ratio:

$$.I = \frac{t_f}{t_f + t_r} \cdot 100 \quad (1)$$

t_f = operating time at constant load
 t_r = rest time

Relative Einschaltdauer:

$$I = \frac{t_f}{t_f + t_r} \cdot 100 \quad (1)$$

t_f = Betriebszeit mit konstanter Last
 t_r = Aussetzzeit

Rapport d'intermittence:

$$I = \frac{t_f}{t_f + t_r} \cdot 100 \quad (1)$$

t_f = temps de fonctionnement à charge constante
 t_r = temps de repos

Servizio di durata limitata S2

Caratterizzato da un funzionamento a carico costante per un periodo di tempo limitato, inferiore a quello richiesto per raggiungere l'equilibrio termico, seguito da un periodo di riposo di durata sufficiente a ristabilire, nel motore, la temperatura ambiente.

Limited duration duty S2

This type of duty is characterized by operation at constant load for a limited time, which is shorter than the time required to reach thermal equilibrium, followed by a rest period of sufficient duration to re-establish ambient temperature in the motor.

Kurzzeitbetrieb S2

Betrieb mit konstanter Last für eine begrenzte Zeit, die unter der Zeit liegt, die zum Erreichen des thermischen Gleichgewichts benötigt wird, gefolgt von einer Aussetzzeit, die so lang ist, daß der Motor wieder auf die Umgebungstemperatur abkühlen kann.

Service de durée limitée S2

Caractérisé par un fonctionnement à charge constante pour une période de temps limitée, inférieure à celle nécessaire pour atteindre l'équilibre thermique, suivie par une période de repos de durée suffisante pour rétablir, dans le moteur, la température ambiante.

Servizio intermittente periodico S3:

Caratterizzato da una sequenza di cicli di funzionamento identici, ciascuno comprendente un periodo di funzionamento a carico costante ed un periodo di riposo. In questo servizio, la corrente di avviamento non influenza la sovratemperatura in modo significativo.

Periodical intermittent duty S3:

This type of duty is characterized by a sequence of identical operation cycles, each including a constant load operation period and a rest period. For this type of duty, the starting current does not significantly influence overtemperature.

Periodische Einschaltdauer S3:

Betrieb mit aufeinanderfolgenden identischen Betriebszyklen, die alle einen kurzzeitigen Betrieb mit konstanter Belastung und eine Aussetzzeit einschließen. Bei dieser Betriebsart beeinflusst der Anlaufstrom die Übertemperatur nicht in signifikanter Weise.

Service intermittent périodique S3

Caractérisé par une séquence de cycles de fonctionnement identiques, comprenant chacun une période de fonctionnement à charge constante et une période de repos. Dans ce service, le courant de démarrage n'influence pas l'excès de température de façon significative.

5.6 **Frequenza massima di avviamento Z**

Nelle tabelle dei dati tecnici motori è indicata la max frequenza di inserzione a vuoto Z_0 con $I = 50\%$ riferita alla versione autofrenante. Questo valore definisce il numero max di avviamenti orari a vuoto che il motore può sopportare senza superare la max temperatura ammessa dalla classe di isolamento F.

Nel caso pratico di motore accoppiato ad un carico esterno con potenza assorbita P_r , massa inerziale J_c e coppia resistente media durante l'avviamento M_L , il numero di avviamenti ammissibile si può calcolare in modo approssimato con la seguente formula:

$$Z = \frac{Z_0 K_c K_d}{K_J} \quad (2)$$

dove:

$$K_J = \frac{J_m + J_c}{J_m} = \text{fattore di inerzia}$$

$$K_c = \frac{M_a - M_L}{M_a} = \text{fattore di coppia}$$

$$K_d = \text{fattore di carico} \text{ vedi tabella (C17)}$$

5.6 **Maximum starting frequency Z**

The motor selection charts include the max. no-load starting frequency Z_0 with intermittence of $I=50\%$ referred to the brake version. This number defines the maximum number of no-load starts acceptable to the motor without exceeding the maximum temperature permitted according to insulation class F.

To give a practical example, a motor coupled to an external load with absorbed power P_r , moment of inertia of masses J_c and load torque during start M_L , the number of permitted starts can be calculated approximately using the following formula:

$$Z = \frac{Z_0 K_c K_d}{K_J} \quad (2)$$

where:

$$K_J = \frac{J_m + J_c}{J_m} = \text{inertia factor}$$

$$K_c = \frac{M_a - M_L}{M_a} = \text{torque factor}$$

$$K_d = \text{load factor} \text{ see table (C17)}$$

5.6 **Maximale Schaltungshäufigkeit Z**

In den Tabellen mit den Technischen Daten der Motoren ist die maximale Schaltungshäufigkeit im Leerlauf Z_0 bei relativer Einschaltdauer $I = 50\%$ bezüglich auf die Bremsausführung. Dieser Wert definiert die maximale Anzahl von Anfahrten im Leerlauf pro Stunde, die der Motor ertragen kann, ohne die durch die Isolierstoffklasse F festgelegte maximale zulässige Temperatur zu überschreiten.

Im praktischen Fall eines mit einer externen Last verbundenen Motors mit einer Leistungsaufnahme von P_r , Trägheitsmasse J_c und mittlerem Gegenmoment während des Anfahrens von M_L kann die zulässige Anzahl Anfahrten mit folgender Formel approximativ berechnet werden:

$$Z = \frac{Z_0 K_c K_d}{K_J} \quad (2)$$

wobei gilt:

$$K_J = \frac{J_m + J_c}{J_m} = \text{Trägheitsfaktor}$$

$$K_c = \frac{M_a - M_L}{M_a} = \text{Drehmoments-}$$

$$K_d = \text{faktor Lastfaktor} \text{ siehe Tabelle (C17)}$$

5.6 **Fréquence maximum de démarrage Z**

Dans les tableaux des caractéristiques techniques des moteurs se trouve la fréquence maximum d'insertion à vide Z_0 avec intermittence $I = 50\%$ référée à la version frein. Cette valeur définit un nombre maximum de démarrages horaires à vide que le moteur peut supporter sans dépasser la température maximum admise par la classe d'isolation F.

Dans le cas pratique de moteur accouplé à une charge extérieure avec puissance absorbée P_r , masse inertielle J_c et couple résistant moyen pendant le démarrage M_L , le nombre de démarrages admissible peut se calculer de façon approximative avec la formule suivante:

$$Z = \frac{Z_0 K_c K_d}{K_J} \quad (2)$$

où:

$$K_J = \frac{J_m + J_c}{J_m} = \text{facteur d'inertie}$$

$$K_c = \frac{M_a - M_L}{M_a} = \text{facteur de couple}$$

$$K_d = \text{facteur de charge} \text{ voir tableau (C17)}$$

(C17)

Con il numero di avviamenti così ottenuto si dovrà in seguito verificare che il massimo lavoro di frenatura sia compatibile con la capacità termica del freno W_{max} indicata nelle tabelle (C 24-C28).

Having thus obtained the number of starts, next you must check that the maximum braking work is compatible with the brake's thermal capacity W_{max} indicated under tables (C 24-C28).

Auf Grundlage der so berechneten Anzahl Schaltungen muß man dann prüfen, ob die maximale Bremsarbeit mit der Wärmegrenzleistung der Bremse W_{max} kompatibel ist, die in die Tabellen (C 24-C28) angegeben ist.

Avec le nombre de démarrages ainsi obtenu, il faudra ensuite vérifier que le travail maximum de freinage soit compatible avec la capacité thermique du frein W_{max} indiquée dans les tableaux (C 24-C28).

6.0 **MOTORI ASINCRONI AUTOFRENANTI**

Generalità

L'esecuzione autofrenante prevede l'impiego di freni a pressione di molle alimentati in c.c. (tipo BN63 - 160FD) o in c.a. (tipo BN63 - 132FA).

6.0 **BRAKE MOTORS**

General information

The brake version foresees the use of d.c. (type BN63 - 160FD) or a.c. (type BN63 - 132FA) spring pressure brakes.

6.0 **BREMSMOTOREN**

Allgemeines

Bei Bremsmotoren sind als Bremse Federdruckbremse vorgesehen, die mit Gleichstrom (Typ BN63 - 160FD) oder mit Drehstrom (Typ BN63 - 132FA) geliefert werden.

6.0 **MOTEURS ASYNCHRONES FREINS**

Généralités

L'exécution avec frein prévoit l'utilisation de freins à pression de ressort alimentés en c.c. (type BN63 - 160FD) ou en c.a. (type BN63 - 132FA).

Il freno funziona secondo il principio di sicurezza, ossia interviene in seguito all'azione delle molle quando il motore viene disinserito oppure in mancanza di tensione. Le caratteristiche elettriche e meccaniche (escluso dimensioni d'ingombro) corrispondono a quelle dei motori trifasi.

The brake operates according to a safety concept: it is activated by the springs when the motor is switched off or in the event of power failure. The electric and mechanical characteristics (excepting overall dimensions) are as for three-phase motors.

Die Bremse arbeitet nach dem Prinzip der Sicherheitsbremse, d.h. sie greift nach Betätigung der Federn ein, wenn der Motor ausgeschaltet wird, bzw. wenn der Strom ausfällt. Die elektrischen und mechanischen Eigenschaften (mit Ausnahme der Außenmaße) entsprechen denen von Drehstrommotoren.

Le frein fonctionne selon le principe de sécurité c'est-à-dire qu'il intervient à la suite de l'action des ressorts lorsque le moteur est déconnecté ou bien en l'absence de tension. Les caractéristiques électriques et mécaniques (sauf dimensions d'encombrement) correspondent à celles des moteurs triphasés.

Le caratteristiche salienti sono:

Main characteristics:

Die wichtigsten Eigenschaften sind:

Les principales caractéristiques sont:

Coppie frenanti dimensionate sulla coppia nominale del motore e regolabili modificando il tipo e/o il numero di molle (freni FD) o agendo sui grani di compressione delle molle (tipo FA). Disco freno con doppia guarnizione d'attrito (materiale a bassa usura privo di amianto). Leva di sblocco meccanico con ritorno automatico per le operazioni manuali (a richiesta). Elemento elastico di compensazione per assorbire le vibrazioni meccaniche durante la rotazione. Protezione antipolvere (6,7) ed anello V-ring (5) sull'albero motore come illustrato nella tabella (C19). Trattamento anticorrosivo di tutte le superfici del freno. Isolamento bobina toroidale in classe F.

Braking torques settled according to motor rated torque and adjustable by modifying type and/or quantity of springs.

Brake disk with double friction lining (low wear, asbestos-free material). Mechanical hand release lever with self re-engaging facility for manual operations (on request). Compensation spring to absorb mechanical. Dust protection (6,7) and V-ring (5) on motor shaft (IP 55 on request), table (C19). Anti-corrosion treatment on all brake surfaces. Toroidal coil insulated to class F.

Bremsmomente ausgelegt in Abhängigkeit vom Nenndrehmoment des Motors; regulierbar durch Modifikation der Art oder der Anzahl der Federn.

Bremsscheibe mit doppeltem Bremsbelag (Material mit geringem Verschleiß und ohne Asbest). Hebel zum mechanischen Lösen der Bremse mit automatischer Rückstellung für manuelle Aktivitäten (auf Anfrage). Elastisches Ausgleichselement für die Aufnahme der mechanischen Schwingungen während der Drehung. Staubschutz (6,7) und V-Ring (5) auf der Antriebswelle (IP55 auf Wunsch), Abbildung (C19). Korrosionsbeständige Oberflächenbehandlung aller Oberflächen der Bremse.

couples de freinage dimensionnés en fonction du couple nominal du moteur et réglables en modifiant le type et/ou le nombre des ressorts.

Disque de frein avec double garniture de friction (matériau à faible usure sans amiante). Levier de déblocage mécanique avec retour automatique pour les opérations manuelles (sur demande). Élément élastique de compensation pour absorber les vibrations mécaniques durant la rotation. Protection anti-poussière (6,7) et bague V-ring (5) sur l'arbre moteur (IP 55 sur demande), tableau (C19). Traitement anticorrosion de toutes les surfaces du frein. Isolation bobine torique en classe F.

6.1 Frein

Costruzione e funzionamento

Construction and operation

Konstruktionsform und Funktionsweise

Construction et fonctionnement

La costruzione prevista sullo scudo posteriore del motore come illustrato nelle tabelle (C18) (C19) è costituita da:

Installed on motor rear shield as shown in tables (C18) and (C19) and consisting of:

Anordnung auf dem hinteren Schild des Motors wie in den Abbildungen (C18) und (C19) angegeben. Konstruktion aus:

Construction prévue sur le couvercle postérieur du moteur comme illustré dans les tableaux (C18) et (C19) et constituée par:

- 1 elettromagnete che contiene la bobina toroidale fissato con tre viti allo scudo lato ventola del motore; tre molle di precarico realizzano il posizionamento assiale
- 2 ancora mobile con smusso per alloggiamento della guaina parapolvere
- 3 disco freno libero assialmente e collegato all'albero del mozzo trascinatore
- 4 molle di spinta dell' ancora mobile

- 1 electro-magnet containing the toroidal coil, secured with three screws on the rear shield fan side; three preloaded springs ensure axial positioning.
- 2 mobile armature plate preset for dust protection elements assembly.
- 3 axially independent brake disk connected to the shaft by the trailing hub
- 4 braking springs

- 1 Elektromagnet, der die Ringspule enthält und mit drei Schrauben am Schild auf der Lüfterradseite des Motors befestigt ist; drei Federn zum Vorspannen sorgen für die axiale Positionierung.
- 2 Beweglicher Anker mit Fase für die Aufnahme der Staubschutzdichtung.
- 3 Axial frei bewegliche Bremscheibe, die an der Welle mit der Mitnehmerscheibe befestigt ist.
- 4 Schubfedern des beweglichen Ankers.

- 1 Électro-aimant contenant la bobine torique, fixé avec trois vis au couvercle côté ventilateur du moteur. Trois ressorts de précharge réalisent le positionnement axial.
- 2 armature mobile avec chanfrein pour logement de la gaine de protection contre la poussière.
- 3 disque de frein libre axialement, relié à l'arbre par le moyeu d'entraînement.
- 4 ressorts de poussée de l'armature mobile.

In caso di mancanza di tensione, l'ancora mobile, spinta dalle molle del freno, blocca il disco freno tra la superficie dell'ancora stessa e lo scudo motore.

In case of a power cut, as the armature plate is pushed by the brake springs, it engages the brake disk between the armature plate surface and the motor shield.

Bei fehlender Spannung blockiert der bewegliche Anker, der von den Bremsfedern geschoben wird, die Bremscheibe zwischen der Oberfläche des Ankers selbst und dem Motorschild.

En cas d'absence de tension, l'armature mobile, poussée par les ressorts du frein, bloque le disque du frein entre la surface de l'armature et le couvercle moteur.

Quando la bobina viene eccitata, l'attrazione magnetica dell'ancora mobile vince la reazione elastica delle molle e sblocca il freno.

When the coil is energized, the mobile armature plate magnetic attraction overcomes the elastic reaction of the springs thus releasing the brake.

Wenn die Spule versorgt wird, wird die magnetische Kraft des beweglichen Ankers die elastische Reaktion der Federn winnen und wird die Bremsauflösen.

Lorsque la bobine est excitée, l'attraction magnétique de l'armature mobile compense l'action des ressorts et débloque le frein.

(C18)

IP 54 (STANDARD)

6.2 Freno tipo FD

Alimentazione freno

L'alimentazione della bobina freno in c.c. è prevista per mezzo di opportuno raddrizzatore.

Il raddrizzatore nell'esecuzione base è fissato alla scatola coprimorsetti e già collegato alla bobina del freno.

La tensione del raddrizzatore-bobina freno è coordinata all'alimentazione motore (tensione di fase o stellata del motore) e, per motori ad una velocità, il collegamento alla morsettiera motore è realizzato in fabbrica. In questo caso la tensione del freno può essere omessa.

La tensione standard è $230\text{ V} \pm 10\%$ 50/60 Hz.

Il raddrizzatore è del tipo a diodi a semplice semionda ($V_{c.c.} = 0,45\text{ V.c.a.}$).

Per i freni FD02, FD03, FD53, FD04, FD14, FD05, FD15, è previsto di serie il raddrizzatore tipo NB (disponibile a richiesta il tipo SB), tensione max. d'impiego 500 V c.a.

Per i freni FD55, FD56, FD06, FD06S, FD07 è previsto di serie il raddrizzatore tipo SB a controllo elettronico dell'eccitazione (tensione d'impiego $200\text{ V} < V < 440\text{ V}$ c.a. Quest'ultima soluzione, che consente tempi di sblocco del freno ridotti, è realizzata sovraeccitando l'elettromagnete nei primi istanti d'inserzione passando poi alla tensione nominale a distacco freno avvenuto.

L'impiego del raddrizzatore tipo SB è sempre da prevedere nei casi di:

- elevato numero di interventi orari
- tempi di sblocco freno ridotti
- elevate sollecitazioni termiche del freno.

Per la protezione del raddrizzatore, della bobina e dei contatti contro le sovratensioni di manovra, sono previsti di serie dei varistori.

(C19)

IP 55 (OPTIONAL)

6.2 Bremstyp FD

Stromversorgung der Bremse

Der Motor ist stets mit einem Gleichrichter ausgestattet, der im Klemmkasten befestigt und mit der Spule der Bremse verbunden ist.

Die Spannung der Bremsengleichrichterspule ist mit Motorversorgung (Sternspannung des Motors) und bei hohen Geschwindigkeitsmotoren wird der Anschluß dem Motorklemmkasten in der Fabrik durchgeführt. In diesem Fall kann die Bremsspannung nicht angegeben werden. Die Standardspannung ist $230\text{ V} \pm 10\%$ - 50/60 Hz.

Der Gleichrichter ist in Einwegschaltung ausgeführt (V Gleichstrom: $0,45\text{ V}$ Wechselstrom).

Bei den Bremsen vom Typ FD02, FD03, FD53, FD04, FD14, FD05 und FD15 ist serienmäßig ein Gleichrichter vom Typ NB vorgesehen (auf Wunsch Typ SB lieferbar); die max. Betriebsspannung ist 500 V W.S.

Bei den Bremsen vom Typ FD55, FD56, FD06, FD06S und FD07 ist serienmäßig ein Gleichrichter vom Typ SB mit elektronischer Schnellerregung vorgesehen; die Betriebsspannung ist $200\text{ V} < V < 440\text{ V W.S.}$

Diese Lösung, die sehr kurze Ansprechzeiten der Bremse erlaubt, wird verwirklicht, indem der Elektromagnet in der ersten Einschaltphase übererregt wird und nach erfolgter Öffnung der Bremse nur noch mit Nennspannung gespeist wird. Die Verwendung des Gleichrichters vom Typ SB ist in folgenden Fällen stets vorzusehen:

- hohe Schalthäufigkeit;
- kurze Bremsansprechzeiten;
- hohe thermische Belastung der Bremse.

Zum Schutz des Gleichrichters, der Spule und der Kontakte zum Schutz von Schaltüberspannungen sind einige Varistoren vorgesehen.

6.2 Freins type FD

Alimentation frein

Le moteur est toujours doté d'un redresseur fixé dans la boîte à borne et relié à la bobine du frein.

La tension du redresseur-bobine frein est coordonnée à l'alimentation moteur (tension de phase ou en étoile du moteur). Pour moteur mono-vitesse, le raccordement à la boîte à borne est réalisé en usine. Dans ce cas, la tension du frein peut être omise. La tension standard est de $230\text{ V} \pm 10\%$ 50/60 Hz.

Le redresseur est du type à diodes à mono alternance ($V_{c.c.} = 0,45\text{ Vca.}$).

Pour les freins FD02, FD03, FD53, FD04, FD14, FD05, FD15, le redresseur type NB est prévu en série (le type SB est disponible sur demande), tension maxi d'utilisation 500V en courant alternatif.

Pour les freins, FD55, FD56, FD06, FD06S, FD07, le redresseur type SB à contrôle électronique de l'excitation (tension d'utilisation $200\text{ V} < V < 440\text{ V}$ en courant alternatif) est prévu en série.

Cette solution, qui permet des durées de déblocage du frein réduites, est réalisée en surexcitant l'électro-aimant dans les premiers instants d'insertion, en passant ensuite à la tension nominale lorsque le déblocage du frein est intervenu.

L'emploi du redresseur type SB est toujours à prévoir dans les cas de:

- nombre élevé d'interventions horaires
- temps de déblocage frein réduits
- contraintes thermiques élevées du frein.

Pour la protection du redresseur, de la bobine et des contacts contre les surtensions de manœuvre, des varistors sont prévus en série.

Collegamenti

Per i motori a semplice polarità in esecuzione normale il collegamento del raddrizzatore alla morsettiera motore viene eseguito in fabbrica.
Per i motori a 2 velocità e per alimentazione freno separata prevedere il collegamento al raddrizzatore secondo la tensione freno indicata nella targhetta motore.

Le tabelle (C20), (C21), (C22), (C23) riportano gli schemi di collegamento del freno.

Wiring

For single polarity motors, connection of the rectifier to terminal-box is carried out in-house.
For 2-speed motors and for separate brake supply, the brake voltage indicated on the motor name plate shall be used.

The brake wiring diagrams are shown in tables (C20), (C21), (C22), and (C23).

Anschlüsse

Bei eintourigen Motoren wird der Gleichrichter werkseitig Motor-klemmkasten angeschlossen.
Bei den polumschaltbaren Motoren mit separater Stromversorgung der Bremse ist der Anschluß entsprechend der auf dem Motor-leistungsschild angegebenen Nennspannung vorzusehen.

Die Abbildungen (C20), (C21), (C22) und (C23) zeigen die Pläne für den Anschluß der Bremse.

Branchements

Pour les moteurs à simple polarité, le branchement du redresseur au bornier moteur est réalisé en usine.
Pour les moteurs à deux vitesses et pour l'alimentation frein séparée, prévoir le branchement selon la tension indiquée sur la plaque d'identification moteur.

Les tableaux (C20), (C21), (C22), (C23) présentent les schémas de branchement du frein.

Legenda:

t₁ = tempo di rilascio del freno con alimentatore a semionda
t_{1s} = tempo di rilascio del freno con alimentatore con sovraeccitazione
t₂ = ritardo di frenatura con interruzione lato c.a. e alimentazione separata
t_{2c} = ritardo di frenatura con interruzione lato c.a. e c.c.
I valori di t₁, t_{1s}, t₂, t_{2c}, indicati nella tabella (C22) sono riferiti al freno tarato alla coppia massima, trafero medio e tensione nominale.
W_{max} = energia max per frenata
W = energia di frenatura tra due regolazioni successive
P_b = potenza assorbita dal freno a 20°C
Mb = coppia frenante statica (± 15%)

Key:

t₁ = brake release time with half-wave rectifier
t_{1s} = brake release time with over-exciting rectifier
t₂ = brake engagement time with interruption and separate power supply a.c. line
t_{2c} = brake engagement time with power interruption on both a.c. and d.c. lines
t₁, t_{1s}, t₂ and t_{2c} values indicated in table (C22) refer to maximum torque brake setting, with medium air-gap and at rated voltage.
W_{max} = max. energy each braking operation
W = braking energy between two consecutive air-gap adjustments
P_b = brake absorbed power at 20°C
Mb = static braking torque (± 15%)

Zeichenerklärung:

t₁ = Bremsenansprechzeit mit Einwegschaltungsgleichrichter
t_{1s} = Bremsenansprechzeit mit Gleichrichter und mit Überregulung
t₂ = Bremsungszeit mit Unterbrechung W.S. Seite und unabhängige Versorgung
t_{2c} = Bremsungszeit mit Unterbrechung D.S. und G.S. Seite und unabhängige Versorgung
Die in Tabelle (C22) angegebenen Werte für t₁, t_{1s}, t₂ und t_{2c} beziehen sich auf eine auf das maximale Drehmoment eingestellte Bremse mit mittlerem Luftspalt und bei Nennspannung.
W_{max} = max Energie pro Bremsung
W = Bremsenergie zwischen zwei Eistellungen
P_b = Aufnahme der Bremse bei 20°C
Mb = Statische Bremsmoment (± 15%)

Légende:

t₁ = durée de déblocage du frein avec alimentateur mono alternance
t_{1s} = durée de déblocage du frein avec alimentateur à surexcitation
t₂ = retard de freinage avec interruption côté c.a. et alimentation séparée
t_{2c} = retard de freinage avec interruption côté c.a. et c.c.
Les valeurs de t₁, t_{1s}, t₂, t_{2c} indiquées dans le tableau (C22) se réfèrent au frein taré au couple maximum, entrefer moyen et tension nominale.
W_{max} = énergie maxi. par freinage
W = énergie de freinage entre deux réglages successifs
P_b = absorption du frein à 20°C
Mb = couple freinant statique (± 15%)

* Nel freno FD08 i valori di coppia frenante Mb sono ottenuti con n.9, n.7 e n.6 molle.

* For brake FD08, brake torque values Mb are achieved with no.9, no.7 and no.6 springs.

* Bei der Bremse FD08 werden die Bremsmoment Mb durch 9, 7 und 6 Federnerhalten.

* En ce qui concerne le frein FD08, les valeurs de couple freinant Mb sont obtenues avec 9, 7 et 6 ressort.

Caratteristiche volani per motori autofrenanti FD (F1)
Fly-wheel characteristics for FD brake motor series (F1)
Eigenschaften der Schwungräder für Bremsmotoren Typ FD (F1)

7.0 ESECUZIONI SPECIALI

7.1 Protezioni termiche

Oltre alla protezione garantita dall'interruttore magnetotermico, i motori possono essere provvisti di sonde termiche incorporate per proteggere l'avvolgimento da eccessivo riscaldamento dovuto (p.es.) a scarsa ventilazione o servizio intermittente. Questa protezione dovrebbe sempre essere prevista per motori servoventilati (IC416).

Sonde termiche a termistori (E3, E6)

Sono dei semiconduttori che presentano una rapida variazione di resistenza in prossimità della temperatura nominale di intervento. L'andamento della caratteristica $R = f(T)$ è normalizzato dalle Norme DIN 44081, IEC 34-11.

Questi sensori presentano il vantaggio di avere ingombri ridotti, un tempo di risposta molto contenuto e, dato che il funzionamento avviene senza contatti, sono completamente esenti da usura. In genere vengono impiegati termistori a coefficiente di temperatura positivo denominati anche "resistori a conduttore freddo" PTC.

A differenza delle sonde termiche bimetalliche, non possono intervenire direttamente sulle correnti delle bobine di eccitazione e devono pertanto essere collegati ad una speciale unità di controllo (apparecchio di sgancio) da interfacciare alle connessioni esterne.

Con questa protezione vengono inseriti tre PTC, collegati in serie, nell'avvolgimento con terminali disponibili in morsettieria ausiliaria.

Sonde termiche bimetalliche (D3)

I protettori di questo tipo contengono all'interno di un involucro un disco bimetallico che, raggiunta la temperatura nominale di intervento, commuta i contatti dalla posizione di riposo.

Con la diminuzione della temperatura, il disco e i contatti riprendono automaticamente la posizione di riposo.

Normalmente si impiegano tre sonde bimetalliche in serie con contatti normalmente chiusi e terminali disponibili in una morsettieria ausiliaria.

7.0 SPECIAL EXECUTIONS

7.1 Thermal protective devices

In addition to the standard protection provided by the magneto-thermal cut-out device, motors can be supplied with built-in thermal probes to protect windings against overheating caused, for example, by inadequate ventilation or by an intermittent duty.

This additional protection should always be specified for servo-ventilated motors (IC416).

Thermistors (E3, E6)

These are semi-conductors having rapid resistance variation when they are close to the rated intervention temperature.

Variations of the $R = f(T)$ characteristic are specified under DIN 44081, IEC 34-11 Standards.

These elements have several advantages: compact dimensions, rapid response time and, being contact-free, absolutely no wear. Positive temperature coefficient thermistors are normally used (also known as PTC "cold conductor resistors").

Contrary to bimetallic thermostates, they cannot directly intervene on currents of energizing coils, and must therefore be connected to a special control unit (triggering apparatus) to be interfaced with the external connections.

Thus protected, three PTCs connected in series are installed in the winding, the terminals of which are located on the auxiliary terminal-board.

Bimetallic thermostates (D3)

These types of protective devices contain a bimetal disk inside a housing. When the rated temperature is reached, the disk switches the contacts from their initial rest position.

As temperature falls, the disk and contacts automatically return to rest position.

Three bimetallic thermostates connected in series are usually employed, with normally closed contacts. The terminals are located on an auxiliary terminal-board.

7.0 SONDERAUSFÜHRUNGEN

7.1 Thermische Schutzeinrichtungen

Abgesehen von den Motorschutzschaltern mit thermischem und elektromagnetischem Auslöser können die Motoren mit integrierten Temperaturfühlern zum Schutz der Wicklung vor Überhitzung z.B. wegen unzureichender Lüftung oder Aussetzbetriebs ausgestattet werden.

Diese Schutzeinrichtung muß bei fremdbelüfteten Motoren stets vorgesehen werden (IC416).

Temperaturfühler und Thermistoren (E3, E6)

Hierbei handelt es sich um Halbleiter, die eine schnelle Änderung des Widerstands in der Nähe der Nennansprechtemperatur zeigen.

Der Verlauf der Kennlinie $R = f(T)$ ist durch die DIN-Normen 44081 und IEC 34-11 festgelegt.

Diese Sensoren haben folgende Vorteile: sie weisen geringe Außenmaße und eine äußerst kurze Ansprechzeit auf und sind vollkommen verschleißfrei, da sie berührungslos arbeiten.

Im allgemeinen werden Thermistoren mit positivem Temperaturkoeffizienten verwendet, die auch als "Kaltleiter" (PTC-Widerstände) bezeichnet werden.

Im Unterschied zu Bimetall-Temperaturfühlern können sie nicht direkt auf die Erregungsströme der Spulen wirken, sondern müssen an eine spezielle Steuereinheit (Auslösegerät) angeschlossen werden, die mit den externen Anschlüssen kompatibel ist.

Mit dieser Schutzeinrichtung werden drei in Reihe geschaltete PTC-Widerstände in die Wicklung eingesetzt, deren Endanschlüsse an einer Zusatzklemmleiste verfügbar sind.

Bimetal-Temperaturfühler (D3)

Diese Schutzeinrichtungen bestehen aus einer Kapsel, in der sich eine Bimetallscheibe befindet, die bei Erreichen der Nennansprechtemperatur anspricht.

Nach Absenkung der Temperatur geht der Schaltkontakt automatisch in Ruhstellung zurück.

Normalerweise werden drei in Reihe geschaltete Bimetallfühler mit Öffnern verwendet, deren Endverschlüsse an einer Zusatzklemmleiste verfügbar sind.

7.0 EXECUTIONS SPECIALES

7.1 Protections thermiques

Outre la protection garantie par l'interrupteur magnétothermique, les moteurs peuvent être équipés de sondes thermiques incorporées pour protéger le bobinage contre une surchauffe excessive due par exemple à une ventilation insuffisante ou un service intermittent.

Cette protection devrait toujours être prévue pour les moteurs servoventilés (IC416).

Sondes thermométriques (E3, E6)

Ce sont des semiconducteurs qui présentent une variation rapide de résistance à proximité de la température nominale d'intervention.

L'évolution de la caractéristique $R = f(T)$ est défini par les Normes DIN 44081, IEC 34-11.

Ces capteurs présentent l'avantage d'avoir des encombrements réduits, un temps de réponse très bref et, du fait que le fonctionnement a lieu sans contact, il sont exempts d'usure.

En général, on utilise des thermistors à coefficient de température positif dénommés également "résistors à conducteur froid" PTC.

Contrairement aux sondes thermiques bimétalliques, ils ne peuvent intervenir directement sur les courants des bobines d'excitation et doivent par conséquent être reliés à une unité spéciale de contrôle (appareil de déconnexion) à interfacer aux connexions extérieures.

Avec cette protection, trois sondes, reliées en série, sont insérées dans le bobinage avec extrémités disponibles dans le bornier auxiliaire.

Sondes thermiques bimétalliques (D3)

Les protecteurs de ce type contiennent, dans une enveloppe interne, un disque bimetallic qui, lorsque la température nominale d'intervention est atteinte, commutent les contacts de la position de repos.

Avec la diminution de la température, le disque et les contacts reprennent automatiquement la position de repos.

Normalement, on utilise trois sondes bimétalliques en série avec contacts normalement fermés et extrémités disponibles dans un bornier auxiliaire.

7.2 Riscaldatori anticondensa (H1)

I motori funzionanti in ambienti molto umidi e/o in presenza di forti escursioni termiche, possono essere equipaggiati con una resistenza anticondensa. L'alimentazione è prevista da una morsettiera ausiliaria e la tensione standard è 230V c.a. \pm 10% monofase; le potenze sono indicate nella tabella (C26).

7.2 Anti-condensate heaters (H1)

Motors operating in extremely humid environments and/or at a wide temperature range can be supplied with an anti-condensate heater. Power is supplied via an auxiliary terminal-board, standard voltage is 230 V.a.c. \pm 10% single-phase; power specifications are shown in table (C26).

7.2 Wicklungsheizung (H1)

Die Motoren, die in Umgebungen mit hoher Luftfeuchte und der großen Temperaturschwankungen betrieben werden, können mit einem Kondenswasserschutz-Heizelement ausgestattet werden. Die Stromversorgung wird über eine Zusatzklemmleiste mit einer einphasigen Standardspannung von W.S. 230 V \pm 10% bewerkstelligt; die Leistungen sind in Tabelle (C26) angegeben.

7.2 Réchauffeurs anticondensation (H1)

Les moteurs fonctionnant dans des milieux très humides et/ou en présence de fortes excursions thermiques, peuvent être équipés de résistance anticondensation. L'alimentation est prévue par un bornier auxiliaire et la tension standard est de 230V c.a. \pm 10% monophasée. Les puissances sont indiquées dans le tableau (C26).

(C26)

| Tipo / Motor type Motortyp / Moteur type | Potenza / Power [W] Leistung / Puissance [W] | Tipo / Motor type Motortyp / Moteur type | Potenza / Power [W] Leistung / Puissance [W] |
|---|---|---|---|

Importante !

Durante il funzionamento del motore la resistenza anticondensa non deve mai essere inserita.

Important !

While motor is running, the anti-condensate heater must be switched off.

Wichtig!

Während des Betriebs des Motors darf das Heizelement nie eingeschaltet werden.

Important!

Pendant le fonctionnement du moteur, la résistance anti-condensation ne doit jamais être branchée.

7.3 Dispositivo antiritorno (AL, AR)

Nelle applicazioni dove è necessario impedire la rotazione inversa del motore dovuta all'azione del carico, è possibile impiegare motori provvisti di un dispositivo antiritorno (disponibile solo sulla serie M 1 - M 4). Questo dispositivo, pur consentendo la libera rotazione nel senso di marcia, interviene istantaneamente in caso di mancanza di alimentazione bloccando la rotazione dell'albero nel senso inverso.

Il dispositivo antiritorno è lubrificato a vita con grasso specifico per questa applicazione.

In fase di ordine dovrà essere indicato chiaramente il senso di marcia previsto.

In nessun caso il dispositivo antiritorno dovrà essere utilizzato per impedire la rotazione inversa nel caso di collegamento elettrico errato.

Nella tabella (C27) sono indicate le coppie nominale e massima di bloccaggio attribuite ai dispositivi antiritorno utilizzati, mentre la raffigurazione schematica del dispositivo è inserita nella tabella (C28).

Le dimensioni sono le stesse del motore autofrenante.

7.3 Anti run-back device (AL, AR)

For applications where motor reverse rotation due to load effect must be avoided, motors equipped with an anti run-back device can be used (available for the M1- M4 series only).

While allowing rotation in the direction required, this device operates instantaneously in case of power failure, preventing the shaft running back.

The anti run-back device is life lubricated with special grease for this specific application.

When ordering, customers should clearly indicate required rotation direction.

Never use the anti run-back device to prevent reverse rotation caused by incorrect electrical connection.

Table (C27) shows rated and maximum locking torques for the anti run-back devices used. A diagram of the device can be seen in Table (C28).

Dimensions are similar to brake motors.

7.3 Rücklaufsperr (AL, AR)

Für Anwendungen, bei denen ein durch die Last verursachtes Rücklaufen des Motors verhindert werden soll, können Motoren installiert werden, die über eine Rücklaufsperr verfügen (nur bei Serie M1 - M4 verfügbar).

Diese Vorrichtung, die eine völlig unbehinderte Drehung des Motors in Laufrichtung gestattet, greift sofort ein, wenn die Spannung fehlt, und verhindert die Drehung der Welle in die Gegenrichtung.

Die Rücklaufsperr verfügt über eine Dauer - Schmierung mit einem speziell für diese Anwendung geeigneten Fett.

Bei der Bestellung muß die vorgesehene Drehrichtung des Motors genau angegeben werden.

Die Rücklaufsperr darf keinesfalls verwendet werden, um im Falle eines fehlerhaften elektrischen Anschlusses die Drehung in die Gegenrichtung zu verhindern. In Tabelle (C27) sind die Nenndrehmomente und Höchstdrehmomente für die verwendeten Rücklaufsperr angegeben; Abbildung (C28) zeigt eine schematische Darstellung der Vorrichtung. Die abmessungen sind ähnlich denen der Bremsmotoren.

7.3 Dispositif anti-retour (AL, AR)

Pour les applications où il est nécessaire d'empêcher la rotation inverse du moteur à cause de l'action de la charge, il est possible d'utiliser des moteurs dotés d'un dispositif anti-retour (disponible seulement sur la série M1 - M4).

Ce dispositif, bien que permettant la libre rotation dans le sens de marche, intervient instantanément en cas de manque d'alimentation en bloquant la rotation de l'arbre dans le sens inverse.

Le dispositif anti-retour est lubrifié à vie avec une graisse spécifique pour cette application.

En phase de commande, il faudra indiquer clairement le sens de marche prévu. En aucun cas, le dispositif anti-retour ne devra être utilisé pour empêcher la rotation inverse en cas de branchement électrique erroné.

Le tableau (C27) indique le couple nominal et le couple maximum de blocage attribués aux dispositifs anti-retour utilisés alors que la représentation schématique du dispositif se trouve dans le tableau (C28). Les dimensions sont le même du moteur frein.

(C27)

| Tipo | Coppia nominale di bloccaggio | Coppia max. di bloccaggio | Velocità di distacco |
|-------------|--------------------------------|------------------------------|---|
| Motor type | Rated locking torque | Max.locking torque | Release speed |
| Motortyp | Nenndrehmoment der Sperre | Max. Drehmoment der Sperre | Ausrückgeschwindigkeit |
| Moteur type | Couple nominal de blocage [Nm] | Couple maxi. de blocage [Nm] | Vitesse de décollement [min ⁻¹] |
| M 1 | 6 | 10 | 750 |
| M 2 | 16 | 27 | 650 |
| M 3 | 54 | 92 | 520 |
| M 4 | 110 | 205 | 430 |

(C28)

7.4 Servoventilazione (U1)

A partire dalla grandezza BN71 i motori possono essere forniti con ventilazione assiale indipendente. Il raffreddamento è realizzato da un ventilatore installato all'interno della calotta copriventola, con alimentazione indipendente (220/240 V 50/60 Hz per grandezza 71 - 100, 230/400 V 50/60 Hz per 112 - 132).

A richiesta può essere applicato un encoder o una dinamo tachimetrica. La tabella (C29) riporta le variazioni dimensionali (L₁ e L₂) del motore servoventilato.

7.4 Servo-ventilation (U1)

Starting from size BN71, the motors can be supplied with independent axial ventilation. Cooling is by an independently powered fan housed inside the fan cowl (220V/240V, 50/60 Hz for sizes 71 - 100, 230/400 V, 50/60 Hz for 112 - 132).

An encoder or tacho-generator can be fitted on request. Table (C29) shows dimension variations (L₁ and L₂) for the servo-ventilated motor.

7.4 Fremdbelüftung (U1)

Ab der Baugröße BN71 können die Motoren mit einem Fremdlüfter geliefert werden. Die Kühlung erfolgt durch einen Ventilator, der unter der Lüfterradkappe angeordnet ist und über eine unabhängige Stromversorgung verfügt. (220/240 V - 50/60 Hz für Größen 71 - 100, 230/400 V - 50/60 Hz für 112 - 132). Auf Wunsch kann ein Encoder oder ein Tacho-Dynamo installiert werden. Tabelle (C29) zeigt die Maßänderungen (L₁ und L₂) des fremdbelüfteten Motors.

7.4 Servoventilation (U1)

A partir de la taille BN71, les moteurs peuvent être équipés d'une ventilation axiale indépendante. Le refroidissement est réalisé par un ventilateur installé à l'intérieur de la calotte cache-ventilateur, avec alimentation indépendante. (220/240 V - 50/60 Hz pour taille 71 - 100, 230/400V 50/60 Hz pour 112 - 132). Sur demande, on peut appliquer un encodeur ou une dynamo tachymétrique. Le tableau (C29) présente les variations dimensionnelles (L₁ et L₂) du moteur servoventilé.

Legenda:

L₁ = Variazione dimensionale rispetto alla dimensione LB dei motori trifase normali
L₂ = Variazione dimensionale rispetto alla dimensione LB dei motori autofrenanti serie FD

Key:

L₁ = Dimensional variation with respect to dimension LB of normal three-phase motors.
L₂ = Dimensional variation with respect to dimension LB of FD brake motor series.

* N.B. Nei motori autofrenanti con leva di sblocco, la leva verrà collocata lateralmente.

* N.B. In brake motors with a hand release lever, the lever is side located.

(C29)

Zeichenerklärung:

L₁ = Maßänderung im Vergleich zum Maß LB der normalen Drehstrommotoren.
L₂ = Maßänderung im Vergleich zum Maß LB der Bremsmotoren Serie FD.

*P.S. bei den Bremsmotoren mit Bremslüfthebel wird der Hebel seitlich angebracht

Légende:

L₁ = Variation dimensionnelle par rapport à la dimension LB des moteurs triphasés normaux.
L₂ = variation dimensionnelle par rapport à la dimension LB des moteurs frein série FD.

*N.B. Pour les moteurs freins avec levier de déblocage, le levier sera placé latéralement.

7.5 Tettuccio parapioggia (RC)

Questa protezione viene applicata al motore quando esso è montato con albero in basso per proteggerlo dall'ingresso di corpi solidi e dallo stillicidio. Deve essere richiesta in fase di ordine in quanto non prevista nella versione base. La tabella (C30) riporta il massimo ingombro del tettuccio parapioggia

7.5 Rain canopy (RC)

Rain canopy is applied to the motor when mounted with the shaft downwards in order to provide a protection against solid bodies and dripping water. The rain canopy option must be specified when ordering as the same is not of standard supply. Table (C30) shows the overall dimensions of the rain canopy:

7.5 Schutzdach (RC)

Diese Schutzvorrichtung wird am Motor angebracht, wenn der Motor mit der Welle nach unten montiert wird und von Feststoffen und Tropfwasser geschützt werden muß. Die Abdeckung muß bei Bestellung angefordert werden, da der Motor in der Standardausführung nicht darüber verfügt. In Tabelle (C30) sind die maximalen Außenmaße der Regenschutzabdeckung

7.5 Capot de protection anti-pluie (RC)

C'est une protection qui est appliquée au moteur lorsque ce dernier est monté avec arbre vers bas pour le protéger contre la pénétration de corps solides ou de la stillation. Il doit être demandé au moment de la commande étant donné que le moteur standard ne le prévoit pas. Le tableau (C30) présente l'encombrement maximum du capot de protection anti-pluie.
